Basic Statistics for Health Science Students David S. Phillips, 1978-01 *The World of Learning* 1990, 1990 Basic Statistics A. Maxwell, 1978-03-09 For many years now I have been required to give a series of elementary lectures on statistics to medical students about to undertake a postgraduate course in psychiatry The declared aim of the course for which very limited time was available was to provide the students with some initial understanding of the statistical terminology and elementary techniques to which other teachers in particular psychologists and sociologists would be likely to refer in the course of their lectures The task was tricky for two reasons In the first place most of the students involved despite their best intentions had forgotten their school mathematics and secondly no textbook existed at the right level of difficulty which contained examples appropriate to these students needs and experience The present book was written to fill the gap Though primarily intended for psychiatrists the book should prove very useful to any student of the behavioural sciences who wants a simple introductory course on the principles of experimental design and data analysis It must be one of the simplest text books on elementary statistics ever written I am indebted to the literary executor of the late Sir Ronald A Fisher F R S to Dr Frank Yates F R S and to Oliver Boyd Ltd for permission to reprint Tables 3 and 5 from their book *Statistical Tables for Biological Agricultural and Medical Research* **Ethical Issues in Psychology** Philip Banyard, Cara Flanagan, 2025-05-06 *Ethical Issues in Psychology A Critical Introduction* offers readers a clear review of current ethical practices and ideas in psychology and goes on to challenge some of the agreed wisdom on ethics Ethical issues within psychology are not easy to resolve and debates continue as we encounter new dilemmas This book introduces ethics and their importance and uses examples from psychological research to consider key ethical issues ethical principles and guidelines for psychologists including BPS guidelines ethics in practice in psychology ethical problems within psychology such as racism and methods for ethical research including socially sensitive research internet mediated research and the use of animals in psychological research Fully up to date this book considers recent challenges for researchers and teachers including privacy and consent dilemmas in the use of social media for psychological research the rise of the open science movement and an awareness of research misconduct and fraud and the narrow focus of psychological research that positions itself as objective and scientific while sitting in a European and therefore predominantly White context Offering a comprehensive examination of ethical issues in psychology across a wide range of fields the book encourages readers to consider the ethics related questions they should be asking when undertaking their own research The book is essential reading for undergraduate and pre undergraduate students of psychology and related subjects Congressional Record United States.
