Cardiovascular Neuroendocrinology Gina L. C. Yosten, J. Thomas Cunningham, 2023-10-28 The cardiovascular system and the neuroendocrine system are integrated at multiple levels This integration is key to normal physiological function Further it adapts to accommodate changes related to aging the organism's reproductive state or physiological challenges This type of adaptability or plasticity also can contribute to pathophysiology when these systems are stressed This volume discusses how neuroendocrine systems influence cardiovascular function in health and disease The first section provides detailed

background information on neuronal and neuroendocrine control of cardiovascular function This is followed by chapters highlighting the cardiovascular role of neuroendocrine hormones in regulating physiological states such as pregnancy and the effects of biological sex on vascular function The influence of exercise stress psychology and aging on cardiovascular function and dysfunction and the possibility of therapeutically targeting the neuroendocrine axis for the treatment of cardiovascular disease are discussed in the final section of the book This book is of relevance for students trainees and established researchers alike who are seeking for an overview on the neuroendocrine control of cardiovascular function and disease This is the fourteenth volume in the International Neuroendocrine Federation INF Masterclass in Neuroendocrinology series which aims to illustrate the highest standards and encourage the use of the latest technologies in basic and clinical research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology

Radhakrishna Pillai, 2013-10-25 Being a complex disease that affects millions of people world over cancer research has assumed great significance Translational cancer research transforms scientific discoveries in the laboratory or population studies into clinical application to reduce incidence of cancer morbidity and mortality It is becoming increasingly evident that cancer is a preventable disease The IVth International Symposium on Translational Cancer Research held in Udaipur India in December 2011 discussed various aspects of the biological processes in cancer cells and approaches to cancer prevention A few contributions from this meeting are presented in this book providing an in depth analysis of data on cancer prevention and therapeutics These contributions are either critical reviews or research reports The topics discussed include evidence based nutritional recommendations for cancer patients and survivors risk factors such as stress enrichment of tumour stem cells by anticancer drug treatment contributing to tumour recurrence and the mechanism of anticancer effects of various natural products Chemosensitizing effect of curcumin anti cancer effect of products from neem action of sulforaphane and cytotoxic effect of a number of novel synthetic coordination complexes of trace metals have been discussed Novel molecular targets of angiogenesis and molecular basis of the gender bias to thyroid cancer have also been discussed This book provides useful information on translational cancer research to clinicians and biomedical scientists

Public Health Service Publication, **Molecular Basis of Breast Cancer** Jose Russo, Irma H. Russo, 2011-06-28 book whose goal is to comprehensively review in ten During the past 30 years we have witnessed the emer chapters the fundamental knowledge on breast can gence

of new disciplines whose contribution to the understanding of the biology of breast cancer have been enormous. The opening chapter links epidemiology and environmental exposures on hormone nuclear receptors which control the expression of cancer incidence to the development of the organ and of genetic programs involved in cellular processes its role in cancer initiation. Central to this approach that are essential for normal and aberrant cell is the endocrine control of breast development the growth have been major contributors to the therapy relationship of cell proliferation with the presence of and prevention of hormone dependent cancers. The steroid hormone receptors in the breast epithelium and finally the importance of full differentiation as a discovery of the association of hereditary breast cancers with mutations in the BRCA1 and BRCA2 tool for protecting the breast from developing cancer genes and the concept that they essentially represent. Reported are studies of the pathogenesis of breast a continuum of mutations with different degrees of cancer that have elucidated the site of origin of breast penetrance within given families have added considerable cancer and have been validated by in vitro experimentable understanding to the molecular basis of breast mentation.

Publications Issued by the Public Health Service United States. Public Health Service, 1961 The Endometrium F.A. Kimball, 2012-12-06 The Eighth Brook Lodge Conference on Problems of Reproductive Physiology is the latest in a series of small meetings held over 18 years. The topics for these meetings have reflected the changing interests and backgrounds of the organizers. The recent rapidly increasing quantity of information on the uterine endometrium and its continuing relevance to fertility control stimulated the organizers to focus the 1979 workshop on this topic. The first four speakers provided a histological background for the molecular and biochemical studies described subsequently. The interaction of biochemist physiologist pathologist and physician as they focus their thoughts and talents on this limited area of the body is apparent in the discussions of presentations. This workshop was planned to provide in sight and a sense of proportion for the participants. For the reader the record of the proceedings should serve as a useful reference to the state of the art in this area of research. The uterine endometrium is central in the successful implantation and development of the embryo. Examination of the physical relationships biochemical interactions and hormonal influences in this tissue could further advance the understanding of this pivotal tissue in the reproductive process. The depth of the understanding of endometrial physiology should be reflected in our ability to better control this reproductive endpoint and to treat its dysfunction. The efforts of many individuals made these Proceedings possible.

Fluoride in Drinking Water National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Fluoride in Drinking Water, 2007-01-22 Most people associate fluoride with the practice of intentionally adding fluoride to public drinking water supplies for the prevention of tooth decay. However fluoride can also enter public water systems from natural sources including runoff from the weathering of fluoride containing rocks and soils and leaching from soil into groundwater. Fluoride pollution from various industrial emissions can also contaminate water supplies. In a few areas of the United States

fluoride concentrations in water are much higher than normal mostly from natural sources Fluoride is one of the drinking water contaminants regulated by the U S Environmental Protection Agency EPA because it can occur at these toxic levels In 1986 the EPA established a maximum allowable concentration for fluoride in drinking water of 4 milligrams per liter a guideline designed to prevent the public from being exposed to harmful levels of fluoride Fluoride in Drinking Water reviews research on various health effects from exposure to fluoride including studies conducted in the last 10 years *Pediatric Critical Care E-Book* Jerry J.
