Asthma Sebastian L. Johnston, Stephen T. Holgate, 2008-04-15 Asthma is one of the most important diseases affecting our society It is an extremely common condition that reduces quality of life and acute exacerbations can be life threatening It affects a disproportionate number of children With the overwhelming volume of research being carried out in this field specialists need a method of keeping up to date with current opinion As with the other Challenges books Challenges in Asthma is aimed at hospital specialists and therefore assumes a certain level of knowledge about the disease It builds on this by discussing only areas of controversy and uncertainty in both the basic understanding of asthma and its management An international author list will provide stimulating debate with and ultimately draw some conclusions from existing data which will benefit readers in their day to day practice

Peptide Growth Factors and Their Receptors II Michael B.

Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone to stay informed on this subject by reading the possible for At the same time it is becoming increasingly apparent that primary literature these substances are of universal importance in biology and medicine and that the original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body

and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research

Dendritic Cells in Fundamental and Clinical

Immunology Paola Ricciardi-Castagnoli, 2013-11-11 These proceedings contain selected contributions from the participants to the Fourth International Symposium on Dendritic cells that was held in Venice Lido Italy from October 5 to 10 1996 The symposium was attended by more than 500 scientists coming from 24 different countries Studies on dendritic cells DC have been greatly hampered by the difficulties in preparing sufficient cell numbers and in a reasonable pure form At this meeting it has been shown that large quantities of DC can be generated from precursors in both mice and humans and this possibility has enormously encouraged studies aimed to characterize DC physiology and DC specific genes and to employ DC

therapeutically as adjuvants for immunization The possibility of generating large numbers of autologous DC that can be used in the manipulation of the immune response against cancer and infectious diseases has tremendously boosted dendritic cell research and the role of DC in a number of medical areas has been heatedly discussed **Thomas' Hematopoietic Cell Transplantation, 2 Volume Set** Stephen J. Biochemistry David E. Metzler,2003-05-04 Biochemistry The Chemical Reactions of Living Cells is a well integrated up to date reference for basic chemistry and underlying biological phenomena Biochemistry is a comprehensive account of the chemical basis of life describing the amazingly complex structures of the compounds that make up cells the forces that hold them together and the chemical reactions that allow for recognition signaling and movement This book contains information on the human body its genome and the action of muscles eyes and the brain Thousands of literature references provide introduction to current research as well as historical background Contains twice the number of chapters of the first edition Each chapter contains boxes of information on topics of general interest **Mast Cells and Tumours** Domenico Ribatti,Enrico Crivellato,2011-06-21 Mast cells are versatile tissue homing secretory cells which were first described by Paul Ehrlich in 1878 Mast cells have long been implicated in the pathogenesis of allergic reactions and certain protective responses to parasites Their functional role however has been discovered to be increasingly complex and multifarious Mast cells have been implicated in various cell mediated immune reactions being found in tissues from multiple disease sites and as a component of the host reaction to bacteria parasite and even virus infections They have also been shown to participate to angiogenic and tissue repair processes after injury The importance of a possible functional link between chronic inflammation and cancer has long been recognized As most tumours contain inflammatory cell infiltrates which often include plentiful mast cells the question as to the possible contribution of mast cells to tumour development has progressively been emerged In this book the general biology of these cells their development anatomical distribution and phenotype as well as

their secretory products will first be discussed The biology of tumour cells their structural and molecular characteristics the specificity of the tumour microenvironment and the development of a vascular network in the tumour context will be analyzed The involvement of mast cells in tumour biology and tumour fate will then be considered with particular emphasis on the capacity of these cells to stimulate tumour growth by promoting angiogenesis and lymphangiogenesis The last chapter suggest that mast cells may serve as a novel therapeutic target for cancer treatment *Biochemistry - The Chemical Reactions of Living Cells*
