Explorations into Chinese as a Second Language Istvan Kecskes, 2017-06-23 This volume explores how linguistic research can support the teaching and learning of Chinese as a second language. It responds to a rapidly growing interest in the Chinese language all over the world and answers the need for a strong research background for the discipline. Without that, Chinese language learning remains only a unique experience and/or a useful education challenge. The first section explores crucial issues about the structure and use of Chinese as a Second Language, such as word order, noun-noun compounds, meaning-making in writing, pronunciation and stress and tone. The second section explores the learning of Chinese by seeking answers to questions about difficulties, expectations, beliefs, use of corpus and learning how to express necessity. The authors, coming from eight different countries, demonstrate how existing knowledge has been generated, bring together different lines of research, point out tendencies in the field, demonstrate and explain what tools and methods researchers can use to address major issues in the field and give direction to what future research should focus on. Key Issues in Chinese as a Second

Language Research Istvan Kecskes, Chaofen Sun, 2017-06-26 Key Issues in Chinese as a Second Language Research presents and discusses research projects that serve as theoretical grounding for improving the teaching and learning of Chinese as a second language (CSL) in order to help researchers and practitioners better understand the acquisition, development and use of CSL. With the exception of the first chapter which is state of the art, each chapter makes an attempt to bring together theory and practice by focusing on theory building and theory application in practice. The book is organized around areas where most future research is needed in CSL: phonology, semantics, grammar and pragmatics. Consisting of contributions from an international group of scholars working on cutting edge research, this is the ideal text for researchers, graduate students and practitioners in the area of Chinese as a second or foreign language. **The Handbook of Chinese Linguistics** C. scholars define reduplication as a formally restricted grammatical process neatly distinguishing it from mere repetition as a discursal option. However, there is a fuzzy grey area between the two processes that has rarely been explored so far. In this timely collection, the phenomenon of exact repetition understood broadly as the systematic iteration of one and the same linguistic item within relatively close syntactic proximity is investigated from a number of angles. The volume contains studies from phonology, morphology, syntax, semantics, and pragmatics and deals with a broad range of languages including alleged reduplication avoiders. In bringing together different theoretical perspectives, phenomenological domains, and methodologies and in linking the fields of syntax and discourse to those of morphology and morphophonology, the volume provides new insights into the structure and meaning of exact repetition phenomena and more generally into their status within a theory of language. The collection will appeal to formally and functionally oriented scholars from all subfields of linguistics including typology.
