Chocolate Files:

Mental Files in Perspective Josef Perner, 2025-07-25 Intellectual development is primarily considered a domain specific enterprise Children develop naive physics a folk psychology theory of mind a naive biology etc But understanding perspective is a general overarching phenomenon that cuts across such domains in development and in the brain This has important theoretical consequences For instance our folk psychology cannot consist of a uniform theory of mind for explaining behaviour Parts of the theory that are sensitive to perspective differences have to be separated from those that are not A central concern is how perspective is represented in the mind The answer comes from mental files theory A mental file represents or refers to an object It presents the object under a particular mode of presentation perspective Coreferential files refer to the same object and present the object under different perspectives Files thus give us a concrete way to capture perspectives with the tools for basic object cognition This book introduces mental files theory in relation to object files and discourse referents and then applies it to the development of perspective taking in early childhood and to brain imaging The theory goes well beyond perspective it is the theoretical tool for representing persisting objects tracking them over time and storing knowledge about them From a leading figure in developmental psychology this book addresses a topic much neglected in the cognitive sciences The Context and Content series is a forum for outstanding original research at the intersection of philosophy linguistics and cognitive science The general editor is Francois Recanati Institut Jean Nicod Paris
