Radiology Education Rethy K. Chhem, Kathryn M. Hibbert, Teresa van Deven, 2008-10-01 This is a book about scholarship in the broadest sense

The writing of this book has shown how through scholarship we can bring together academics practitioners scientists radio logists and administrators from around the world to begin the kinds of conversations that promise to move us to a new way of thinking about and enacting radiology education

Over the past century we have witnessed tremendous change in biomedical science and the scope of this change has demanded new approaches to medical education

The most significant of the changes in medical education has been a fundamental paradigm shift from a teacher centered approach to a student centered approach

This shift combined with the explosion of knowledge has pressed medical schools to undertake major curricular and institutional reform

At the same time progress in medical education research methods has led to innovative approaches to support the improvement of learning methods and evaluation

Over the past several years there has also been a shift toward thinking about and planning for medical education beyond the undergraduate level to include postgraduate and continuing

medical education but also to consider learning within the professional environment and the development of professional continuous education Viewing medical education as a continuum that spans from the first year of medical school until retirement introduces new ways to conceptualize the teaching and learning needs that address lifelong learning demands that extend over 30 or 40 years
