

The group $\mathrm{SL}_2(F)$ is embedded into $\mathrm{SL}_2(\mathbb{R}) \times \mathrm{SL}_2(\mathbb{R})$ by the two real embeddings of F . It acts on $\mathbb{H} \times \mathbb{H}$, where $\mathbb{H} = \{\tau \in \mathbb{C}; \Im(\tau) > 0\}$ is the complex upper half plane, via fractional linear transformations,

$$\begin{pmatrix} a & b \\ c & d \end{pmatrix} z = \left(\frac{az_1 + b}{cz_1 + d}, \frac{a'z_2 + b'}{c'z_2 + d'} \right). \quad (1.3)$$

Here and throughout we use $z = (z_1, z_2)$ as a standard variable on $\mathbb{H}^2$. If $z \in \mathbb{H}^2$ and $\begin{pmatrix} a & b \\ c & d \end{pmatrix} \in \mathrm{SL}_2(F)$, we write

$$N(cz + d) = (cz_1 + d)(c'z_2 + d'). \quad (1.4)$$

Lemma 1.2. *For $z \in \mathbb{H}^2$ and $\gamma = \begin{pmatrix} a & b \\ c & d \end{pmatrix} \in \mathrm{SL}_2(F)$ we have*

$$\Im(\gamma z) = \frac{\Im(z)}{|N(cz + d)|^2}.$$

Proof. This follows immediately from the analogous assertion in the one-dimensional case. $\square$

Basis Problem For Modular Forms On Gamma:

The Basis Problem for Modular Forms on $\Gamma_0(N)$ Hiroaki Hijikata, Arnold K. Pizer, Thomas R. Shemanske, 1989
The basis problem for modular forms of degree one is to find a basis for a space of modular forms with elements whose Fourier coefficients can be computed explicitly The authors give a general treatment for all cases The main idea in the solution is to consider two kinds of forms theta series associated with special order and bases of primitive neben space

Number Theory and Modular Forms Bruce C. Berndt, Ken Ono, 2013-11-11 Robert A Rankin one of the world's foremost authorities on modular forms and a founding editor of The Ramanujan Journal died on January 27 2001 at the age of 85 Rankin had broad interests and contributed fundamental papers in a wide variety of areas within number theory geometry analysis and algebra

To commemorate Rankin's life and work the editors have collected together 25 papers by several eminent mathematicians reflecting Rankin's extensive range of interests within number theory. Many of these papers reflect Rankin's primary focus in modular forms. It is the editors' fervent hope that mathematicians will be stimulated by these papers and gain a greater appreciation for Rankin's contributions to mathematics. This volume would be an inspiration to students and researchers in the areas of number theory and modular forms.

Harmonic Analysis on Symmetric Spaces and Applications I Audrey Terras, 2012-12-06 Since its beginnings with Fourier and as far back as the Babylonian astronomers harmonic analysis has been developed with the goal of unraveling the mysteries of the physical world of quasars, brain tumors and so forth as well as the mysteries of the nonphysical but no less concrete world of prime numbers, diophantine equations and zeta functions. Quoting Courant and Hilbert in the preface to the first German edition of *Methods of Mathematical Physics*: Recent trends and fashions have however weakened the connection between mathematics and physics. Such trends are still in evidence, harmful though they may be. My main motivation in writing these notes has been a desire to counteract this tendency towards specialization and describe applications of harmonic analysis in such diverse areas as number theory, which happens to be my specialty, statistics, medicine, geophysics and quantum physics. I remember being quite surprised to learn that the subject is useful. My graduate education was that of the 1960s. The standard mathematics graduate course proceeded from Definition 1.1.1 to Corollary 14.5.59 with no room in between for applications, motivation, history or references to related work. My aim has been to write a set of notes for a very different sort of course.

Introduction to Elliptic Curves and Modular Forms Neal I. Koblitz, 2012-12-06 This textbook covers the basic properties of elliptic curves and modular forms with emphasis on certain connections with number theory. The ancient congruent number problem is the central motivating example for most of the book. My purpose is to make the subject accessible to those who find it hard to read more advanced or more algebraically oriented treatments. At the same time I want to introduce topics which are at the forefront of current research. Down to earth examples are given in the text and exercises with the aim of making the material readable and interesting to mathematicians in fields far removed from the subject of the book. With numerous exercises and answers included the textbook is also intended for graduate students who have completed the standard first year courses in real and complex analysis and algebra. Such students would learn applications of techniques from those courses thereby solidifying their understanding of some basic tools used throughout mathematics. Graduate students wanting to work in number theory or algebraic geometry would get a motivational example oriented introduction. In addition advanced undergraduates could use the book for independent study projects, senior theses and seminar work.

Kuyk, 2009-02-28 An international Summer School on Modular functions of one variable and arithmetical applications took place at RUCA Antwerp University from July 17 to August 3, 1972. This book is the first volume in a series of four of the Proceedings of the Summer School. It includes the basic course given by A Ogg and several other papers with a strong analytic flavour. Volume 2 contains the courses of R P Langlands on l -adic representations and P Deligne on modular schemes, representations of GL and papers on related topics. Volume 3 is devoted to p -adic properties of modular forms and applications to l -adic representations and zeta functions. Volume 4 collects various material on elliptic curves including numerical tables. The School was a NATO Advanced Study Institute and the organizers want to thank NATO for its major subvention. Further support in various forms was received from IBM Belgium, the Coca Cola Co of Belgium, Rank Xerox Belgium, the Fort Food Co of Belgium and NSF Washington D C. We extend our warmest thanks to all of them as well as to RUCA and the local staff not forgetting hostesses and secretaries who did such an excellent job.

Modular Forms: A Classical And Computational Introduction (2nd Edition) Lloyd James Peter Kilford, 2015-03-12 Modular Forms is a graduate student level introduction to the classical theory of modular forms and computations involving modular forms including modular functions and the theory of Hecke operators. It also includes applications of modular forms to various subjects such as the theory of quadratic forms, the proof of Fermat's Last Theorem and the approximation of π . The text gives a balanced overview of both the theoretical and computational sides of its subject allowing a variety of courses to be taught from it. This second edition has been revised and updated. New material on the future of modular forms as well as a chapter about longer form projects for students has also been added.
