The Dark Side of Software Engineering Johann Rost, Robert L. Glass, 2011-03-23 Betrayal Corruption Software engineering Industry experts Johann Rost and Robert L Glass explore the seamy underbelly of software engineering in this timely report on and analysis of the prevalence of subversion lying hacking and espionage on every level of software project management Based on the authors original research and augmented by frank discussion and insights from other well respected figures The Dark Side of Software Engineering goes where other management studies fear to tread a corporate environment where schedules are fabricated trust is betrayed millions of dollars are lost and there is a serious need for the kind of corrective action that this book ultimately proposes *Blowing Agents and Foaming Processes* 2002 ,2002 **A System of Instruction in the Practical Use of the Blow Pipe** ,1858 **Weir Experiments, Coefficients, and Formulas** Robert Elmer Horton, 1906 **NASA Technical Note** United States. Freeman, Lysle P. Parlett, Robert L. Henderson, 1971 **Theory and Practice of CO₂ Utilization in Steelmaking** Rong Zhu, 2022-09-12 This book analyzes the mechanism of the application of CO₂ in steelmaking by looking at the thermodynamics and kinetics of the reactions of CO₂ with the elements present in molten steel This book is the first academic monograph either at home or abroad on the application of CO₂ in the steelmaking field The thermodynamic conditions of the reactions of CO₂ with silicon manganese phosphorus chromium nickel vanadium and other elements were calculated and analyzed using the FactSage thermodynamic software and the selective oxidation law of the above multiple elements by CO₂ was also analyzed In terms of kinetics the interfacial reaction mechanism of CO₂ was analyzed via gas isotope exchange technology and the O₂ transfer process and transfer rate between the CO₂ slag and steel were studied In terms of materials and energy balance how to use the high temperature

characteristics of CO₂ to control the temperature of the molten pool improve the reaction conditions of molten iron reduce the evaporation of molten iron and reduce the amount of steelmaking dust were introduced Based on the experimental data theoretical models of unit operation for the application of CO₂ in steelmaking were established including decarburization denitrification dephosphorization decarburization and chromium retention vanadium extraction and carbon preservation and these theoretical models were applied to the steelmaking production process which is an important step in going from theory to practice The above research work has opened up a new solution for energy saving and liquid steel cleaning in the iron and steel production process and represents progress in steelmaking technology This book is used as a reference book for managers engineering and technical personnel and related professional teachers and students of Iron Steel enterprises government departments consulting services and evaluation agencies colleges and secondary professional schools
