Choice Over Time:

Choice Over Time George Loewenstein, Jon Elster, 1992-10-27 Many of our most urgent national problems suggest a widespread lack of concern for the future Alarming economic conditions such as low national savings rates declining corporate investment in long term capital projects and ballooning private and public debt are matched by such social ills as diminished educational achievement environmental degradation and high rates of infant mortality crime and teenage pregnancy At the heart of all these troubles lies an important behavioral phenomenon in the role of consumer manager voter student or parent many Americans choose inferior but immediate rewards over greater long term benefits Choice Over Time offers a rich sampling of original research on intertemporal choice how and why people decide between immediate and delayed consequences from a broad range of theoretical and methodological perspectives in philosophy political science psychology and economics George Loewenstein Jon Elster and their distinguished colleagues review existing theories and forge new approaches to understanding significant questions Why do people seem to discount future benefits Do individuals use the same decision making strategy in all aspects of their lives What part is played by situational factors such as the certainty of delayed consequences How are decisions affected by personal factors such as willpower and taste In addressing these issues the contributors to Choice Over Time address many social economic psychological and personal time problems Their work demonstrates the predictive power of short term preferences in behavior as varied as addiction and phobia the effect of prices on consumption and the dramatic rise in debt and decline in savings Choice Over Time provides an essential source for the most recent research and theory on intertemporal choice offering new models for time preference patterns and their aberrations and presenting a diversity of potential solutions to the problem of temporal myopia **Understanding**

Pregnancy in a High-tech Age Robin Gregg, 1995-04 Too often in the debate over reproductive rights and technologies we lose sight of the fundamental emotional and psychological issues that define the experience of pregnancy Robin Gregg here draws on the words and stories of over thirty women to provide a first hand perspective on pregnancy in the modern age In an age where a new advance in reproductive technology occurs seemingly every month pregnancy has come to be defined by such medical procedures as prenatal screening amniocentesis fetal monitoring induced labor and cesarean sections Public policymakers ethicists religious figures and the medical establishment control the debate drowning out the voices of women who grapple in the most immediate sense with the issues Even feminist theorists often overlook the nuances and paradoxes of the reproductive revolution as experienced by individual particular women The reader follows these thirty women as they speak about

whether to become pregnant and by what means how to choose a health provider what meaning they attribute to their pregnancies and how they navigate their way through the contradictory pressures they face during pregnancy The intimate nature of Gregg s research consisting as it does largely of women s pregnancy narratives lends her book a vibrancy often lacking in academic writing about reproduction *New Professionalism and the Future of Work: Interdisciplinary Perspectives on Transformations in Business-Health Relationships* Gabriele Giorgi,Nicola Mucci,Annamaria Di Fabio,Antonio Ariza-Montes,2020-01-02 *Experimental Economics* Nicolas Jacquemet,Olivier L'Haridon,2018-11-29 Over the past two decades experimental economics has moved from a fringe activity to become a standard tool for empirical research With experimental economics now regarded as part of the basic tool kit for applied economics this book demonstrates how controlled experiments can be a useful in providing evidence relevant to economic research Professors Jacquemet and L Haridon take the standard model in applied econometrics as a basis to the methodology of controlled experiments Methodological discussions are illustrated with standard experimental results This book provides future experimental practitioners with the means to construct experiments that fit their research question and new comers with an understanding of the strengths and weaknesses of controlled experiments Graduate students and academic researchers working in the field of experimental economics will be able to learn how to undertake understand and criticise empirical research based on lab experiments and refer to specific experiments results or designs completed with case study applications Neuroscience of Preference and Choice Raymond J. Dolan,Tali Sharot,2012 One of the most pressing questions in neuroscience psychology and economics today is how does the brain generate preferences and make choices With a unique interdisciplinary approach this volume is among the first to explore the cognitive and neural mechanisms mediating the generation of the preferences that guide choice From preferences determining mundane purchases to social preferences influencing mating choice through to moral decisions the authors adopt diverse approaches to answer the question Chapters explore the instability of preferences and the common neural processes that occur across preferences Edited by one of the world s most renowned cognitive neuroscientists each chapter is authored by an expert in the field with a host of international contributors Emphasis on common process underlying preference generation makes material applicable to a variety of disciplines neuroscience psychology economics law philosophy etc Offers specific focus on how preferences are generated to guide decision making carefully examining one aspect of the broad field of neuroeconomics and complementing existing volumes Features outstanding international scholarship with chapters written by an expert in the topic area **Journal of Housing Research** ,1997 **Neuroeconomics** Paul W. Glimcher,2013-08-13 In the years since it first published *Neuroeconomics Decision Making and the Brain* has become the standard reference and textbook in the burgeoning field of neuroeconomics The second edition a nearly complete revision of this landmark book will set a new standard This new edition features five sections designed to serve as both classroom friendly introductions to each of the major subareas in neuroeconomics and as

advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline. The first of these sections provides useful introductions to the disciplines of microeconomics, the psychology of judgment and decision, computational neuroscience, and anthropology for scholars and students seeking interdisciplinary breadth. The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems. Chapters on risk, time preferences, social preferences, emotion, pharmacology, and common neural currencies, each written by leading experts, lay out the foundations of neuroeconomic thought. The third section contains both overview and in-depth chapters on the fundamentals of reinforcement learning, value learning, and value representation. The fourth section, *The Neural Mechanisms for Choice*, integrates what is known about the decision-making architecture into state-of-the-art models of how we make choices. The final section embeds these mechanisms in a larger social context, showing how these mechanisms function during social decision-making in both humans and animals. The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field. A clear explanatory style and a single expository voice characterize all chapters, making core issues in economics, psychology, and neuroscience accessible to scholars from all disciplines. The volume is essential reading for anyone interested in neuroeconomics, in particular, or decision-making in general. Editors and contributing authors are among the acknowledged experts and founders in the field, making this the authoritative reference for neuroeconomics. Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers, introductory chapters on economics, psychology, neuroscience, and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field. Detailed chapters on subjects that include reinforcement learning, risk, intertemporal choice, drift-diffusion models, game theory, and prospect theory make this an invaluable reference. Published in association with the Society for Neuroeconomics (www.neuroeconomics.org). Full-color presentation throughout with numerous carefully selected illustrations to highlight key concepts.

Research Handbook on the Economics of Family Law
Lloyd R. Cohen, Joshua D. Wright, 2011-01-01

Those not learned in the economic arts believe that economics is either solely or essentially concerned with commercial relations. And so it was originally. Then in the second half of the 20th century, economists began applying their minimalist but sturdy tools to other human activities such as marriage, child bearing, crime, religion, and social groups. In this spirit, the *Research Handbook on the Economics of Family Law* gives us a series of original essays by distinguished scholars in economics, law, or both. The essays represent a variety of approaches to the field. Many contain extensive surveys of the literature with respect to the particular question they address. Some employ empirical economics; others are more narrowly legal. They have in common one thing: each scholar employs a core economic tool or insight to shed light on some aspect of family law and social institutions broadly understood. Topics covered include divorce, child support, infant feeding, abortion, access, prostitution, the decline in marriage, birth control, and incentives for partnering.

This comprehensive and enlightening volume will be a valuable reference for those interested in law and economics generally and family law in particular **Addiction** Shahram Heshmat,2015-05-22 *Addiction A Behavioral Economic Perspective* focuses on the behavioral economics of addiction to explain why someone decides and act against her own well being It answers the questions of what accounts for self defeating behavior patterns and how do we best motivate individuals to act according with their long term goals A better understanding of decision processes will lead to an improved knowledge of why people engage in self destructive behaviors and better policy interventions in areas of addiction and obesity The approach also promises to be valuable as a framework for understanding decisions for an addict s professional and business life This book will be of particular use to clinicians students and researchers in the fields of addiction public health and behavior therapy **Oxford Studies in Philosophy of Mind Volume 3** Uriah Kriegel,2023 *Oxford Studies in Philosophy of Mind* presents cutting edge work in the philosophy of mind combining invited articles and articles selected from submissions Each volume will highlight two themes to bring focus to debates The series will reflect the diversity of methods adopted in contemporary philosophy of mind and provide a venue for rigorous and innovative work by both established and up and coming voices in the field The themes covered in the third volume are mind and science sensory experience and the philosophy of mind of Margaret Cavendish and C A Strong It also contains a book symposium on David Papineau s *The Metaphysics of Sensory Experience* Caregiving and Social Support in the Context of Health and Illness Sabrina Cipolletta,Noa Vilchinsky,Val Morrison,2021-02-09
