Meanings of Abstract Art Paul Crowther, Isabel Wünsche, 2012 This book explores the relation of abstract art to nature Traditional picturing and sculpture are based on conventions of resemblance between the work and that which it is a representation of Abstract works in contrast adopt alternative modes of visual representation or break down and reconfigure the mimetic conventions of pictorial art and

sculpture Obviously this means that abstract art takes many different forms However this diversity should not mask some key structural features these center on two basic relations to nature understanding nature in the broadest sense to comprise the world of recognisable objects creatures organisms processes and states of affairs The first involves abstracting from nature to give selected aspects of it a new and extremely unfamiliar appearance The second involves abstract art as the affirmation of a relatively unconstrained natural creativity that issues in new autonomous forms that are not constrained by mimetic conventions Such creativity is often attributed to the power of the unconscious The book contains three categories of essays 1 those on classical modernism Mondrian Malevich Kandinsky Arp early American abstraction 2 those on post war abstraction Pollock Still Newman Smithson Noguchi Arte Povera Michaux postmodern developments and 3 those of a broader art historical and philosophical scope Provided by publisher

The Quest for Food Harald Brüssow, 2007-06-01 When you go into a scientific library or look through the catalogues of scientific publishers you will quickly find books from food scientists food technologists food

chemists food microbiologists and food toxicologists Agronomists nutritionists and physicians have written on food and last but not least cooks What I missed was a book on food written from the perspective of a biologist When Susan Safren the food science editor from Springer Science Business Media LLC invited me to write a book I decided that I would write this book on food biology What I had in mind was a survey on eating through space and time in a very fundamental way but not in the format of a systematic textbook The present book is more of an ordered collection of scientific essays Contents In Chapter 1 I start with a prehistoric Venus to explore the relationship between sex and food Then I use another lady Europe to investigate the strong links between food and culture I then ask what is eating in a very basic but simple physicochemical sense In Chapters 2 and 3 I embark on a biochemistry oriented travel following the path of a food molecule through the central carbon pathway until it is decomposed into CO and H₂O and a lot of ATP My account does not intend to teach biochemistry but to use recent research articles from major scientific journals to look behind food biochemistry
