Art Of Science:

Art and Science Sian Ede, 2012-11-13 Is science the new art? Scientists weave incredible stories, invent wild hypotheses and ask difficult questions about the meaning of life. They have insights into the workings of our bodies and minds which challenge the myths we make about our identities and selves. They create visual images, models and scenarios that are gruesome, baffling or beguiling. They say and do things that are ethically and politically shocking. Contemporary scientists frequently talk about beauty and elegance, artists hardly ever do. While demonstrating how science is affecting the creation and interpretation of contemporary art, this book proposes that artistic insights are as important on their own terms as those in science and that we can and should accommodate both forms of knowledge. Featuring the work of artists such as Damien Hirst, Christine Borland, Bill Viola and Helen Chadwick and art/science collaborative ventures involving Dorothy Cross, Eduardo Kac and Stelarc, it looks at the way new scientific explanations for the nature of human consciousness can influence our interpretation of art, at the squeamish interventions being produced by artists relishing in new technologies and at art which takes on the dangers facing the fragile environment. Seeing the world from the other point of view can inform the practice of both sides; this book will provide new insights to artists, scientists and the wider public. *The Art of Science* Richard Hamblyn, 2011 Science is about discovery, a journey towards knowledge. With authors as diverse as Galileo and Lewis Carroll, the extracts featured in this anthology span centuries and continents; they include startling revelations that changed the way we think and tackle more prosaic questions such as why the sea is salty, they consider the natural beauty of the snowflake and the man-made wonder of the first computer. What links them all is a desire to understand, explain and enrich the world and the ability to communicate this in original, clear and engaging prose. *New Art and Science Affinities* Andrea Grover, 2011 *New Art Science Affinities* was written and designed in one week by four authors: Andrea Grover, R. Gene Debatty, Claire Evans and Pablo Garcia, and two designers. Using a rapid collaborative authoring process known as a book sprint, the topic of *New Art Science Affinities* is contemporary artists working at the intersection of art, science and technology, with explorations into maker culture, hacking, artist research, distributed creativity and technological and speculative design. Chapters include Program Art or Be Programmed, Subvert, Citizen Science, Artists in White Coats and Latex Gloves, The Maker Moment and The Overview Effect. 60 international artists and art collaboratives are featured, including Agnes Meyer Brandis, Atelier Van Lieshout, Brandon Ballengeer, Free Art and Technology, F. A. T., Rafael Lozano-Hemmer, OpenFrameworks, C. E. B., Reas, Philip Ross, Tom Sachs, Saraceno, SymbioticA, Jer Thorp and Marius Watz. ISBN 0977205347. Details: www.cmu.edu/millergallery/nasabook. **Art + Science Now** Stephen Wilson, 2013-01-08 In the face of ridicule and cultural prejudice, the artists/scientists in this book show that good art and good science are not so very different and that when they find their joint niche, their joining can make something powerful, interesting and beautiful. The Art Book In the twenty-first century, some of the most dynamic works of art are being produced not in the studio but in the laboratory, where

artists probe cultural philosophical and social questions connected with cutting edge scientific and technological research Their work ranges across disciplines microbiology the physical sciences information technologies human biology and living systems kinetics and robotics taking in everything from eugenics and climate change to artificial intelligence Art Science Now provides an overview of this new strand of contemporary art showcasing the best international work Featuring some 250 artists it presents a broad range of projects from body art to bioengineering of plants and insects from computer controlled video performances to large scale visual and sound installations

Art, Science, and the Politics of Knowledge Hannah Star Rogers, 2022-05-17 How the tools of STS can be used to understand art and science and the practices of these knowledge making communities In Art Science and the Politics of Knowledge Hannah Star Rogers suggests that art and science are not as different from each other as we might assume She shows how the tools of science and technology studies STS can be applied to artistic practice offering new ways of thinking about people and objects that have largely fallen outside the scope of STS research Arguing that the categories of art and science are labels with specific powers to order social worlds and that art and science are best understood as networks that produce knowledge Rogers shows through a series of cases the similarities and overlapping practices of these knowledge communities The cases which range from nineteenth century artisans to contemporary bioartists illustrate how art can provide the basis for a new subdiscipline called art science and technology studies ASTS offering hybrid tools for investigating art science collaborations Rogers's subjects include the work of father and son glassblowers the Blaschkas whose glass models produced in the nineteenth century for use in biological classification are now displayed as works of art the physics photographs of documentary photographer Berenice Abbott and a bioart lab that produces work functioning as both artwork and scientific output Finally Rogers an STS scholar and contemporary art science curator draws on her own work to consider the concept of curation as a form of critical analysis

The Poetry and Music of Science Tom McLeish, 2019-01-10 What human qualities are needed to make scientific discoveries and which to make great art Many would point to imagination and creativity in the second case but not the first This book challenges the assumption that doing science is in any sense less creative than art music or fictional writing and poetry and treads a historical and contemporary path through common territories of the creative process The methodological process called the scientific method tells us how to test ideas when we have had them but not how to arrive at hypotheses in the first place Hearing the stories that scientists and artists tell about their projects reveals commonalities the desire for a goal the experience of frustration and failure the incubation of the problem moments of sudden insight and the experience of the beautiful or sublime Selected themes weave the practice of science and art together visual thinking and metaphor the transcendence of music and mathematics the contemporary rise of the English novel and experimental science and the role of aesthetics and desire in the creative process Artists and scientists make salient comparisons Defoe and Boyle Emerson and Humboldt Monet and Einstein Schumann and Hadamard The book draws on

medieval philosophy at many points as the product of the last age that spent time in inner contemplation of the mystery of how something is mentally brought out from nothing Taking the phenomenon of the rainbow as an example the principles of creativity within constraint point to the scientific imagination as a parallel of poetry *Exploring the Invisible* Lynn Gamwell, 2002 This sumptuous and stunningly illustrated book shows through words and images how directly profoundly and indisputably modern science has transformed modern art Beginning in the mid nineteenth century a strange and exciting new world came into focus a world of microorganisms in myriad shapes and colors prehistoric fossils bizarre undersea creatures spectrums of light and sound molecules of water and atomic particles Exploring the Invisible reveals that the world beyond the naked eye made visible by advances in science has been a major inspiration for artists ever since influencing the subjects they choose as well as their techniques and modes of representation Lynn Gamwell traces the evolution of abstract art through several waves beginning with Romanticism She shows how new windows into telescopic and microscopic realms combined with the growing explanatory importance of mathematics and new definitions of beauty derived from science broadly and profoundly influenced Western art Art increasingly reflected our more complex understanding of reality through increasing abstraction For example a German physiologist's famous demonstration that color is not in the world but in the mind influenced Monet's revolutionary painting with light As the first wave of enthusiasm for science crested abstract art emerged in Brussels and Munich By 1914 it could be found from Moscow to Paris Throughout the book are beautiful images from both science and art some well known others rare that reveal the scientific sources mined by Impressionist and Symbolist painters Art Nouveau sculptors and architects Cubists and other nineteenth and twentieth century artists With a foreword by astronomer Neil deGrasse Tyson Exploring the Invisible appears in an age when both artists and scientists are exploring the deepest meanings of life consciousness and the universe *The Art of Science* Rossella Lupacchini, Annarita Angelini, 2014-07-22 In addition to linear perspective complex numbers and probability were notable discoveries of the Renaissance While the power of perspective which transformed Renaissance art was quickly recognized the scientific establishment treated both complex numbers and probability with much suspicion It was only in the twentieth century that quantum theory showed how probability might be molded from complex numbers and defined the notion of complex probability amplitude From a theoretical point of view however the space opened to painting by linear perspective and that opened to science by complex numbers share significant characteristics The Art of Science explores this shared field with the purpose of extending Leonardo's vision of painting to issues of mathematics and encouraging the reader to see science as an art The intention is to restore a visual dimension to mathematical sciences an element dulled if not obscured by historians philosophers and scientists themselves *From Art to Science* Cyril Stanley Smith, 1980 This catalog is based on the exhibit Aspects of Art and Science held at the Smithsonian Institution's National Museum of History and Technology and MIT's Compton Gallery in the summer and fall of 1978 It illustrates and discusses 72 objects and rare books from museums and

private collections in the United States and Great Britain These include art masterpieces workaday objects pieces associated with major scientific figures and long extinct cultures all manifesting the themes of Cyril Stanley Smith's research into the relationships among art science and technology Smith a distinguished metallurgist and historian of technology now professor emeritus at MIT has argued persuasively that time and again the artist and artisan have discovered and exploited subtle properties of matter prior to their use in serious technology and long before they attracted scientific attention Students of science and technology art historians and interested readers will enjoy the lavish illustrations many in full color of beautiful and historically significant vases swords beads medallions stamps illuminated manuscripts crystals and much more In addition the text provides a store of information showing how the decorative arts especially ceramics and metals have contributed to scientists understanding of the structure and properties of matter *Picturing Knowledge* Brian S.

Baigrie,1996-05-25 The traditional concept of scientific knowledge places a premium on thinking not visualizing Scientific illustrations are still generally regarded as devices that serve as heuristic aids when reasoning breaks down When scientific illustration is not used in this disparaging sense as a linguistic aid it is most often employed as a metaphor with no special visual content What distinguishes pictorial devices as resources for doing science and the special problems that are raised by the mere presence of visual elements in scientific treatises tends to be overlooked The contributors to this volume examine the historical and philosophical issues concerning the role that scientific illustration plays in the creation of scientific knowledge They regard both text and picture as resources that scientists employ in their practical activities their value as scientific resources deriving from their ability to convey information **Practicing Art/Science** Philippe Sormani,Guelfo

Carbone,Priska Gisler,2018-07-11 Over the last two decades multiple initiatives of transdisciplinary collaboration across art science and technology have seen the light of day Why by whom and under what circumstances are such initiatives promoted What does their experimental character look like and what can be learned epistemologically and institutionally from probing the multiple practices of art science at work In answer to the questions raised *Practicing Art Science* contrasts topical positions and insightful case studies ranging from the detailed investigation of art at the nanoscale to the material analysis of Leonardo's Mona Lisa and its cracked smile In so doing this volume brings to bear the practice turn in science and technology studies on the empirical investigation of multifaceted experimentation across contemporary art science and technology in situ Against the background of current discourse on artistic research the introduction not only explains the particular relevance of the practice turn in STS to tackle the interdisciplinary task at hand but offers also a timely survey of varying strands of artistic experimentation In bringing together ground breaking studies from internationally renowned scholars and upcoming researchers in sociology art theory and artistic practice as well as history and philosophy of science *Practicing Art Science* will be essential reading for practitioners and professionals in said fields as well as postgraduate students and representatives of higher education and research policy more broadly *On Art and Science* Shyam

Wuppuluri, Dali Wu, 2019-11-02 Einstein once remarked After a certain high level of technical skill is achieved science and art tend to coalesce in aesthetics plasticity and form The greatest scientists are always artists as well In this volume some of the world's leading thinkers come together to expound on the interrelations between sciences and arts While one can segregate art and place it outside the scientific realm it is nevertheless inextricably linked to our essential cognitive emotional perceptual modalities and abilities and therefore lies alongside and in close contact with the method of science and philosophy What inspiration can scientists draw from art and how can scientific spirit foster our understanding and creation of aesthetic works How are art and science grounded in our cognition What role does perception play in science and art Are criteria for beauty in art and science the same How does evolution shape our understanding of art How do science art and scientific artistic frameworks shape society as a whole and help us address its pressing issues The epistemological and ontological aspects haunt artists philosophers and scientists alike The essays in this volume address these manifold questions while also elucidating the pragmatic role they play in our daily life

The Art of Science Gareth Morgan, 2014-06-28 Did you ever wonder why science is so boring Maybe scientists are hoping you won't find out quite how dumb they are In *The Art of Science* Gareth Morgan takes you on a romp through the ivory towers of Academe With his no nonsense style he reveals just what goes on inside the fantastical world of scientification and highlights how everyone could benefit greatly if they were to apply some of the insights and innovations described here for the first time Is there any truth in the concepts of black holes or relativity What about the hole in the ozone layer Why can't you kill a virus Why can't pregnant women get ulcers Can continents really slide around the globe How do aeroplanes fly These are some of the questions this book asks questions that scientists wish we wouldn't Morgan then goes on to propose some solutions to the problems science should have been addressing How can we get pollution free energy from the air How could we build a disease free environment How did the people of Peckham get their teenagers to behave Studies have shown that when it comes to solving mazes professors are no smarter than the laboratory rats they work with Pit yourself against the world's greatest thinkers and make up your own mind *The Art of Science* will almost certainly be the most interesting book you have ever read exposing much of the nonsense propounded by 20th century science It requires no special knowledge of science to enjoy it and with its entertaining and informal style it will appeal to any open minded individual

Why Science Needs Art Richard A. P. Roche, Roche Richard, Francesca Farina, Seán Commings, 2018 *Art Science and the Brain* explores the relationship between art and science considering how these seemingly polarised fields have historically informed and influenced each other Reflecting on a time when art and science were considered inseparable and symbiotic pursuits the book discusses how public perception of the relationship between these disciplines has changed with common opinion that they are fundamentally opposite The authors argue that art and science are not disparate disciplines and that there are many examples of the role that art has played for science The book concludes with insights into the emerging field of neuroaesthetics and the role it will play in this complex
