Selling Forest Environmental Services Joshua Bishop, Stefano

Pagiola, Natasha Landell-Mills, 2012 The risks posed by forest destruction throughout the world are highly significant for all. Not only are forests a critical source of timber and non timber forest products but they provide environmental services that are the basis of life on Earth. However, only rarely do beneficiaries pay for the goods and services they experience and there are severe consequences as a result for the poor and for the forests themselves. It has proved difficult to translate the theory of market based approaches into practice. Based on extensive research and case studies of biodiversity conservation, watershed protected and carbon sequestration, this book demonstrates how payment systems can be established in practice, their effectiveness and their implications for the poor.

Environmental Management and Development Christopher J. Barrow, 2005 The environment and its management has been and continues to be a very topical issue. Existing environment and development texts place emphasis on listing problems, making warnings and voicing advocacy but by focusing on environmental management, this informative book offers a very different perspective. Moving on from the usual much discussed viewpoints, Barrow looks towards practical management and problem solving techniques. He clarifies the definition, nature and role of environmental management in development and developing countries, beginning with an introduction to the key terms, issues and tools of environmental management which are linked and developed in later chapters and concluding by discussing who pays for environmental management and its future in developing countries. Written by an experienced and well known author, this clear, user friendly book, ideal for students of resource management, geography and development studies, makes excellent use of chapter summaries, boxed case studies, annotated further readings and websites, discussion questions and illustrations.

Climate Change V Grover, 2004-01-06 The book documents the scientific facts regarding climate change and a brief overview of the key developments in the climate change regime, discussing the Kyoto Protocol and beyond. The North-South politics regarding energy markets and the emissions therefrom are also discussed in the book. After establishing the scientific base, presenting agreements and policies for climate change in general and the Kyoto Protocol in particular, the Instruments and Institutions for the Kyoto Protocol are reviewed. The rapid and large climate changes can be expected to have far reaching and in many instances unpredictable consequences, not only for human societies but also for all forms of life on Earth. For example, a rise in global sea level can threaten coastal cities and settlements throughout the world. The book discusses the impact of climate change and the associated environmental and socio-economic impacts in different parts of the world. The book discusses the science and philosophy behind Climate
