**Bones of Contention**, 2001      **The Genesis Conflict** Walter J. Veith, 2002      *Archaeology: The Key Concepts* Colin Renfrew, Paul Bahn, 2013-09-05 An invaluable resource providing an up to date and comprehensive survey of the key terms used in this discipline today      Studying Human Origins Raymond Corbey, Wil Roebroeks, 2001 This history of human origin studies covers a wide range of disciplines This important new study analyses a number of key episodes from palaeolithic archaeology palaeoanthropology primatology and evolutionary theory in terms of various ideas on how one should go about such reconstructions and what if any the uses of such historiographical exercises can be for current research in these disciplines Their carefully argued point is that studying the history of palaeoanthropological thinking about the past can enhance the quality of current research on human origins The main issues in the present volume are the uses of disciplinary history in terms of present day research concerns the relative weight of cultural and other external contexts and continuity and change in theoretical perspectives The book s overall approach is an epistemological one It does not in other words primarily address anthropological data as such but our ways of handling such data in terms of our most fundamental but usually quite implicit theoretical presuppositions      **How Do We Know the Nature of Human Origins** Dale Anderson, 2004-12-15 Discusses the scientific research which led to the theories of human origin including the contributions of Charles Darwin Thomas Henry Huxley and Louis Leakey      *Gender at the Crossroads of Knowledge* Micaela di Leonardo, 2023-09-01 Gender at the Crossroads of Knowledge brings feminist anthropology up to date highlighting the theoretical sophistication that characterizes recent research Twelve essays by outstanding scholars written with the volume s concerns specifically in mind range across the broadest anthropological terrain assessing and contributing to feminist work on biological anthropology primate studies global economy new reproductive technologies ethno linguistics race and gender and more The editor s introduction not only sets two decades of feminist anthropological work in the multiple contexts of changes in anthropological theory and practice political and economic developments and larger intellectual shifts but also lays out the central insights feminist anthropology has to offer us in the postmodern era The profound issues raised by the authors resonate with the basic interests of any discipline concerned with gender that is all of the social sciences and humanities Gender at the Crossroads of Knowledge brings feminist anthropology up to date highlighting the theoretical sophistication that characterizes recent research Twelve essays by outstanding scholars written with the volume s concerns specifically in      **Barnum Brown** Lowell Dingus, Mark Norell, 2011-12-27 From his stunning discovery of *Tyrannosaurus rex* one hundred years ago to the dozens of other important new dinosaur species he found Barnum Brown led a remarkable life 1873 1963 spending most of it searching for fossils and sometimes oil in every corner of the globe One of the most famous scientists in the world during the middle of the twentieth century Brown who lived fast dressed to the nines gambled drank smoked and was known as a ladies man became as legendary as the dinosaurs he uncovered Barnum Brown brushes off the

loose sediment to reveal the man behind the legend Drawing on Brown s field correspondence and unpublished notes and on the writings of his daughter and his two wives it discloses for the first time details about his life and travels from his youth on the western frontier to his spying for the U S government under cover of his expeditions This absorbing biography also takes full measure of Brown s extensive scientific accomplishments making it the definitive account of the life and times of a singular man and a superlative fossil hunter C.S. Peirce Jaap Brakel, Michael Van Heerden, 1998 This book contains the contributions to an international symposium on Charles Sanders Peirce 1839 1914 Notwithstanding that much of Peirce s philosophical writings still are to be published his contributions to contemporary philosophy can be felt in almost every field The symposium was held at the Institute of Philosophy of the Katholieke Universiteit Leuven in May 1997 Its express aim was to examine Peirce s thought in terms of both its historical integrity and in the application of his thought to current problems The contributions to this book present a comprehensive portrayal of the metaphysical and epistemological strands in the thought of this multi faceted thinker **The Death of Evolution** John Bradford Love, 2025-08-19 The evolutionary hypothesis of spontaneous generation preceded Darwinian evolution and was elucidated by Aristotle three hundred years before the birth of Christ It was the belief that life emanated from decaying meat or grain stored in barns with thatched roofs About spontaneous generation English philosopher and journalist Malcolm Muggeridge said I myself am convinced that spontaneous generation will be one of the great jokes in the history books of the future Posterity will marvel that so flimsy and dubious a hypothesis could be accepted with the incredible credulity that it has And he s right Who today would ever think that life emanates from decaying meat But wait Malcolm Muggeridge did not make that statement about spontaneous generation He made the statement about Darwinian evolution What he actually said was I myself am convinced that the theory of evolution especially to the extent to which it has been applied will be one of the great jokes in the history books of the future Posterity will marvel that so flimsy and dubious a hypothesis could be accepted with the incredible credulity that it has Will people in the near future find Darwinian evolution as laughable as we find spontaneous generation Informational Biopolymers of Genes and Gene Expression R.D. Blake, 2005-03-23 This new text examines the biophysics and biochemistry of nucleic acids and proteins carving out the dynamic interface between chemistry and molecular biology and providing a detailed picture of nucleic acids and proteins their structures biological properties and origins and evolution **Science Firsts** Robert E. Adler, 2003-05-01 Be on hand to witness some of the most monumental scientific discoveries of the past three millennia This engaging collection offers readers the unique experience of being on hand to witness some of the most epic breakthrough in the history of science From ancient Greeks Thales and Pythagoras to Enrico Fermi Francis Watson and James Crick and even Dolly the Sheep Science Firsts provides an unparalleled opportunity to peer over the shoulders of great scientists as they become the first to set eyes on new worlds Over the course of thirty five concise superbly written accounts science writer Robert Adler takes readers on an lively journey through nearly three millennia of epic scientific discovery

offering accessible explanations of the science involved along with vivid historical and biographical details that help place the discoveries and their discoverers in context for contemporary readers      **Primate Politics** Glendon A. Schubert, Roger D. Masters, 1991 The first book to focus on the political behavior of primates also undertakes to compare human social behavior with that of nonhuman primates The editors contribute probing introductory essays to each of the three major parts of the volume in addition to their article length introductory and concluding chapters In his conclusion Masters indicates directions for future work Part I is devoted to theoretical clarification of the interrelationships between the study of primates and humans Part II presents two examples of comparisons between animal and human social behavior that throw valuable light on contemporary political and social systems Part III focuses more precisely on contemporary human politics providing two concrete examples of ethological perspectives on human political behavior In both cases nonverbal cues studied by primatologists are shown to illuminate the dynamics of human politics Contributors include Nicholas G Blurton Jones Frans B M de Waal Basil G Englis Jane Goodall Bruno Latour Roger D Masters Gregory J McHugo Elise F Plate Thelma E Rowell Glendon Schubert James N Schubert Shirley S Strum and Denis G Sullivan      **The Ashgate Research Companion to Thomas Hardy** Rosemarie Morgan, 2016-03-23 In The Ashgate Research Companion to Thomas Hardy some of the most prominent Hardy specialists working today offer an overview of Hardy scholarship and suggest new directions in Hardy studies The contributors cover virtually every area relevant to Hardy s fiction and poetry including philosophy palaeontology biography science film popular culture beliefs gender music masculinity tragedy topography psychology metaphysics illustration bibliographical studies and contemporary response While several collections have surveyed the Hardy landscape no previous volume has been composed especially for scholars and advanced graduate students This companion is specially designed to aid original research on Hardy and serve as the critical basis for Hardy studies in the new millennium Among the features are a comprehensive bibliography that includes not only works in English but in acknowledgment of Hardy s explosion in popularity around the world also works in languages other than English      **The Neanderthals** Stephanie Muller, Friedemann Shrenk, 2008-10-27 The Neanderthal is among the most mysterious relatives of Homo sapiens Was he a dull club swinging muscleman or a being with developed social behaviour and the ability to speak to plan precisely and even to develop views on the afterlife For many the Neanderthals are an example of primitive humans but new discoveries suggest that this image needs to be revised Half a million years ago in Ice Age Europe there emerged people who managed to cope well with the difficult climate Neanderthal Man They formed an organized society hunted Mammoths and could make fire They were able to pass on knowledge they cared for the old and the handicapped burying their dead and placing gifts on their graves Yet they became extinct despite their cultural abilities This richly illustrated book written for general audiences provides a competent look at the history living conditions and culture of the Neanderthal      **Beyond War** Douglas P. Fry, 2009-04-10 A profoundly heartening view of human nature Beyond War offers a hopeful prognosis for a future without

war Douglas P Fry convincingly argues that our ancient ancestors were not innately warlike and neither are we He points out that for perhaps ninety nine percent of our history for well over a million years humans lived in nomadic hunter and gatherer groups egalitarian bands where warfare was a rarity Drawing on archaeology and fascinating recent fieldwork on hunter gatherer bands from around the world Fry debunks the idea that war is ancient and inevitable For instance among Aboriginal Australians warfare was an extreme anomaly Fry also points out that even today when war seems ever present the vast majority of us live peaceful nonviolent lives We are not as warlike as we think and if we can learn from our ancestors we may be able to move beyond war to provide real justice and security for the world *Rethinking Human Evolution* Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology s history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho Fabrizio Mc Manus Apurva Narechania Michael D Petraglia Thomas W Plummer J W F Reumer Jeff Rosenfeld Jeffrey H Schwartz Dietrich Stout Ian Tattersall Alan R Templeton Michael Tessler Peter J Waddell Martine Zilversmit Perspectives on the Past Geoffrey A. Clark, 2017-11-15 Perspectives on the Past shows how knowledge of the past is contingent and is largely determined by the social and intellectual milieu in which those who study it have received their training In the original essays that comprise the volume field archaeologists discuss their own biases and the effects these biases have on the way they conduct their research on hunter gatherers in the Mediterranean *Strange Case of the Mad Professor* Peter Kobel, 2013-07-02 It was one of the biggest scandals in New York University history Professor John Buettner Janusch chair of the Anthropology Department was convicted of manufacturing LSD and Quaaludes in his campus laboratory He claimed the drugs were for an animal behavior experiment but the jury found otherwise B J as he was known served two years in prison before being paroled emerging to find his life and career in shambles Four years later he sought

revenge by trying to kill the sentencing judge and others with poisoned Valentine's Day chocolates. After pleading guilty to attempted murder, he was sentenced to twenty years in prison where he died in mysterious circumstances. But before he was infamous at NYU, B. J. a scientific luminary had also taught at Yale and Duke. One of the world's foremost authorities on lemurs, our distant primate relatives on the remote island of Madagascar, he brought international attention to these endearing and endangered creatures. He cofounded the Duke Lemur Center in North Carolina and inspired a whole generation of scientists to study them and conservationists to save them and their habitat. His trials captured national headlines, but the mad scientist's full story has never been told until now.

A History of African Archaeology Peter Robertshaw, 1990. Archaeologists have been excavating in Africa for over 200 years. Contributors place the subject within the broader political, social, and economic context. Not only have the attitudes and aspirations of both colonialism and nationalism been important influences on the development of African archaeology, but certain discoveries have also had considerable political impact. Contributors include J. D. Clark, Thurstan Shaw, and Peter Shinnie, who have been at the forefront of African archaeology for 50 years.

**From Primitives to Primates** David Van Reybrouck, 2012. Where do our images about early hominids come from? In this fascinating in-depth study, David Van Reybrouck demonstrates how input from ethnography and primatology has deeply influenced our visions about the past from the 19th century to this day, often far beyond the available evidence. Victorian scholars were keen to look at contemporary Australian and Tasmanian aboriginals to understand the enigmatic Neanderthal fossils. Likewise, today's primatologists debate to what extent bonobos, baboons, or chimps may be regarded as stand-ins for early human ancestors. The belief that the contemporary world provides living links still goes strong. Such primate models, Van Reybrouck argues, continue the highly problematic comparative method of the Victorian times. He goes on to show how the field of ethnoarchaeology has succeeded in circumventing the major pitfalls of such analogical reasoning. A truly interdisciplinary study, this work shows how scholars working in different fields can effectively improve their methods for interpreting the deep past by understanding the historical challenges of adjacent disciplines. Overviewing two centuries of intellectual debate in fields as diverse as archaeology, ethnography, and primatology, Van Reybrouck's book is one long plea for trying to understand the past on its own terms rather than as facile projections from the present.

David Van Reybrouck (Bruges 1971) was trained as an archaeologist at the universities of Leuven, Cambridge, and Leiden. Before becoming a highly successful literary author, *The Plague*, *Mission Congo*, he worked as a historian of ideas. For more than twelve years, he was co-editor of *Archaeological Dialogues*. In 2011–12, he held the prestigious Cleveringa Chair at the University of Leiden.
