Stahl, H. K. Uthoff, 2012-12-06 During the past decade the prognosis of bone and soft tissue tumors has improved considerably This progress has not only been due to improved therapeutics and diagnostic methods but also due to a team approach now universally adopted Comparison of results possible today were hampered in the past by lack of a clinically relevant staging system and definitive treatment protocols The complexity of the therapeutic management of bone tumors requires a constant exposure to tumors highly skilled diagnostic techniques and specialized expertise It is therefore not surprising to learn that small and medium sized hospitals embarking on the diagnosis and treatment of bone and soft tissue tumors are generally less successful than better equipped major centers This fact has already been recognized by most physicians and surgeons who now refer their patients to specialized oncologic centers Nevertheless they all have to know the present state of the art This symposium was therefore mostly addressed to them This international symposium organized by the Division of Orthopaedic Surgery University of Ottawa and cosponsored by the Association des Chirugiens Orthopedistes du Quebec was held in Ottawa from May 12-14 1983 Each of the 40 presentations clearly demonstrates that disregard for proper staging before initiation of treatment and omission of a clearly defined treatment protocol is definitely unacceptable in view of the knowledge we have acquired

Magnetic Resonance Imaging of Bone and Soft Tissue Tumors and Their Mimics A.M.A. de Schepper, A.D. Degryse, 2012-12-06 Magnetic resonance imaging has already become a most valuable imaging modality in the diagnostic work up of musculoskeletal neoplasms While high accuracy of MRI for staging purposes has been proven we will focus in this monograph on the characterization of primary bone and soft tissue tumors by MRI The major purpose of this monograph is to provide an atlas of magnetic resonance features of primary bone and soft tissue tumors for radiologists orthopedic surgeons and physiotherapists The results presented are based on investigations of 94 primary bone and soft tissue tumors and mimicking conditions by magnetic resonance imaging Although the scale of the material allows for statistical handling the number of patients per subgroup is too small to come to definite conclusions We will therefore limit ourselves to the description of and comments on a great number of cases to illustrate the diagnostic potential of this new imaging modality We would like to thank the anonymous cooperators referring clinicians pathologists nurses technicians and secretaries whose help enabled us to present this monograph We would also like to express our

gratitude to the firms Siemens AG and Schering AG for technical support

Murphey, 2013-09-26 Imaging technology plays an essential role in the diagnosis of soft tissue tumors as well as in surgical planning Not only can imaging studies such as CT and MRI determine the relationship between a tumor and adjacent vessels and nerves but because some soft tissue tumors possess specific radiologic presentations imaging can help pinpoint the tumor type Based on cases seen at the Armed Forces Institute of Pathology and the Mayo Clinic this comprehensive reference offers detailed visually supported information on the radiologic evaluation of soft tissue tumors and tumor like lesions Inside readers will explore the full spectrum of soft tissue pathologies with over 1400 images that highlight both common and atypical presentations The book's expert authors offer valuable advice on selecting the most appropriate imaging modality for each tumor type

Current Concepts of Diagnosis and Treatment of Bone and Soft Tissue Tumors H. K. Uthoff, E. Stahl, 1984-03-01 During the past decade the prognosis of bone and soft tissue tumors has improved considerably This progress has not only been due to improved therapeutics and diagnostic methods but also due to a team approach now universally adopted Comparison of results possible today were hampered in the past by lack of a clinically relevant staging system and definitive treatment protocols The complexity of the therapeutic management of bone tumors requires a constant exposure to tumors highly skilled diagnostic techniques and specialized expertise It is therefore not surprising to learn that small and medium sized hospitals embarking on the diagnosis and treatment of bone and soft tissue tumors are generally less successful than better equipped major centers This fact has already been recognized by most physicians and surgeons who now refer their patients to specialized oncologic centers Nevertheless they all have to know the present state of the art This symposium was therefore

mostly addressed to them This international symposium organized by the Division of Orthopaedic Surgery University of Ottawa and cosponsored by the Association des Chirurgiens Orthopedistes du Quebec was held in Ottawa from May 12 14 1983 Each of the 40 presentations clearly demonstrates that disregard for proper staging before initiation of treatment and omission of a clearly defined treatment protocol is definitely unacceptable in view of the knowledge we have acquired
