*The Musical Brain* Lois Svard, 2023 For centuries poets and philosophers have written about the power of music often suggesting that music is the essence of life itself that music lives within us that we are music Scientists have dismissed these writings as flights of poetic fancy or perhaps metaphor or artistic license They have considered music to be a product of culture and that's the way musicians have studied music as well But have poets and philosophers perhaps had a better sense of the true nature of music Have they been right all along in suggesting that music is life itself     Musical Instruments

Lamberto Tronchin, 2021-02-19 The study of the acoustic and vibrational characteristics of musical instruments in terms of their mechanical behavior sound emission and characteristics started thousands of years ago and among the physicists and mathematicians that addressed this matter we should at least recognize Leonardo da Vinci with his experimental water organ and Ernst Chladni who discovered nodal patterns on rigid surfaces such as soundboards The growing awareness of our intangible cultural heritage and the need to better understand our roots in the field of music have contributed to increasing the efforts to extend our knowledge in this field defining new physical parameters extending the analysis to other musical instruments and developing new methods to synthesize sound from musical instruments using a simple keyboard     □□□
