Bone Health And Osteoporosis A Report Of The Surgeon General:

Bone Health and Osteoporosis United States Public Health Service, Surgeon General of the United States, 2004-12 This first ever Surgeon General's Report on bone health and osteoporosis illustrates the large burden that bone disease places on our Nation and its citizens Like other chronic diseases that disproportionately affect the elderly the prevalence of bone disease and fractures is projected to increase markedly as the population ages If these predictions come true bone disease and fractures will have a tremendous negative impact on the future well being of Americans But as this report makes clear they need not come true by working together we can change the picture of aging in America Osteoporosis fractures and other chronic diseases no longer should be thought of as an inevitable part of growing old By focusing on prevention and lifestyle changes including physical activity and nutrition as well as early diagnosis and appropriate treatment Americans can avoid much of the damaging impact of bone disease and other chronic diseases This Surgeon General's Report brings together for the first time the scientific evidence related to the prevention assessment diagnosis and treatment of bone disease More importantly it provides a framework for moving forward The report will be another effective tool in educating Americans about how they can promote bone health throughout their lives This first ever Surgeon General's Report on bone health and osteoporosis provides much needed information on bone health an often overlooked aspect of physical health This report follows in the tradition of previous Surgeon Generals reports by identifying the relevant scientific data rigorously evaluating and summarizing the evidence and determining conclusions *Bone Health and Osteoporosis*, 2004 This first report of the Surgeon General on bone health and osteoporosis which was requested by Congress comes at a critical time Tremendous progress has been made in bone health in the last several decades particularly in the past 15 years Research has accelerated markedly enabling the medical community to develop a much more detailed understanding of the factors that promote bone health and cause bone disease and fractures This enhanced level of knowledge has led to significant advances in the ability to prevent assess risk factors for diagnose and treat bone disease **Bone Health and Osteoporosis** Department of Health and Human Services, 2012-07-10 This first ever Surgeon General's Report on bone health and osteoporosis illustrates the large burden that bone disease places on our Nation and its citizens Like other chronic diseases that disproportionately affect the elderly the prevalence of bone disease and fractures is projected to increase markedly as the population ages If these predictions come true bone disease and fractures will have a tremendous negative impact on the future well being of Americans But as this report makes clear they need not come true by working together we can change the picture of aging in America Osteoporosis fractures and other chronic diseases no longer should be thought of as an inevitable part of growing old By focusing on prevention and lifestyle changes including physical activity and nutrition as well as early diagnosis and appropriate treatment Americans can avoid much of the damaging impact of bone disease and other chronic diseases In recognition of the importance of promoting bone health and preventing fractures President George W

Bush has declared 2002-2011 as the Decade of the Bone and Joint. With this designation the United States has joined with other nations throughout the world in committing resources to accelerate progress in a variety of areas related to the musculoskeletal system including bone disease and arthritis. As a part of its Healthy People 2010 initiative, the U.S. Department of Health and Human Services (HHS) has developed an important goal for Americans to increase the quality and years of healthy life. Our hope is that Americans can live long and live well. Unfortunately, fractures, the most common and devastating consequence of bone disease, frequently make it difficult and sometimes impossible for people to realize this goal. HHS is committed to developing a wide array of creative and innovative approaches that can help make the goal of living long and living well a reality for Americans. Several programs of particular relevance to bone health include:

- The National Institutes of Health's Osteoporosis and Related Bone Diseases National Resource Center
- The National Resource Center provides timely information for health professionals, patients, and the public on osteoporosis, Paget's disease of bone, osteogenesis imperfecta, and other metabolic bone diseases.
- The National Bone Health Campaign Targeted at 9 to 12 year old girls and their parents: this campaign uses Web sites and other activities to promote nutritional choices and physical activities that benefit bone health.
- Steps to a Healthier US Initiative: HHS launched this initiative in 2003 to advance the President's goal of helping Americans live longer, better, and healthier lives. At the heart of this program lies both personal responsibility for the choices Americans make and social responsibility to ensure that policymakers support programs that foster healthy behaviors and prevent disease.
- VERBTM: It's what you do. This national multicultural social marketing campaign encourages young people ages 9-13 to be physically active every day as a means of promoting overall health, including bone health.

This Surgeon General's Report brings together for the first time the scientific evidence related to the prevention, assessment, diagnosis, and treatment of bone disease. More importantly, it provides a framework for moving forward. The report will be another effective tool in educating Americans about how they can promote bone health throughout their lives.
