Neil Garland, 2012-12-06 The examination of excavated human bone finds is mainly the domain of anthropologists and forensic pathologists the former working with ancient and historical specimens the latter with modern finds The methodological and diagnostic approaches to these skeletal finds are the same regardless of the time of burial For physical anthropology bodily human relics are dealt with as historical resources which give clues to ancient population structure population development life style and subsistence They are thus able to help scientists understand the present state of human populations The identification of the finds whether species diagnosis or the evaluation of individual parameters such as sex age at death body size and shape kinship and pathology follows the same procedure used by forensic pathologists whose task is the identification of bodily relics in cases of crime mass disaster and the like However there are other disciplines which benefit from excavated bone finds Anatomy gains insights into the morphological variability of the skeleton in time and place The implications for modern physicians and pathologists are at least two fold pathological specimens are suitable to unravel the distribution of many diseases and the susceptibility of individuals to pathogens in pre antibiotic populations In addition to this epidemiological aspect exhumed specimens often exhibit advanced states of bone disease which are no longer or only very rarely present in today's industrialized populations because of efficient surgical intervention and pharmacological treatment *Bone Histology* Christian Crowder, Sam Stout, 2011-09-22 A broad understanding of bone and tooth microstructure is necessary for constructing the biological profile of an individual or individuals within a population Bone Histology An Anthropological Perspective brings together authors with extensive experience and expertise in various aspects of hard tissue histology to provide a comprehensive discussion of the application of methods current theories and future directions in hard tissue research related to anthropological questions Topics discussed include The biology underlying skeletal growth and development leading to adult skeletal morphology Current research in understanding bone modeling Histological features of dental hard tissues and their utility in biological anthropology Histological analysis as a means to differentiate human from nonhuman bone and for the purpose of age estimation The biomechanics of cortical bone Histotaphonomy and how postmortem microstructural change can be used for taphonomic inquiry The application of light microscopy in paleopathology to classify pathological conditions The histological study of bone tissue of archaeological origin Researchers

*Bone Loss and Osteoporosis* Sabrina C. Agarwal, Samuel D. Stout, 2011-06-28 With the growing incidence of fragility fractures in Europe and North America over the last three decades bone loss and osteoporosis have become active areas of research in skeletal biology Bone loss is associated with aging in both sexes and is accelerated in women with the onset of menopause However bone loss is related to a suite of complex and often synergistically related factors including genetics pathology nutrition mechanical usage and lifestyle It is not surprising that its incidence and severity vary among populations There has been increasing interest to investigate bone loss and osteoporosis from an anthropological perspective that utilizes a biocultural approach Biocultural approaches recognize the inter relationship between biological cultural and environmental variables Anthropological studies also highlight the value of evolutionary and population approaches to the study of bone loss These approaches are particularly suited to elucidate the multifactorial etiology of bone loss The idea for this volume came out of a symposium organized by the editors at the 70th annual meeting of The American Association of Physical Anthropologists in Kansas City Missouri Many of the symposium participants along with several additional leading scientists involved in bone and osteoporosis research are brought together in this volume Each chapter focuses on a different aspect of bone loss and fragility with a fresh and stimulating perspective
