Automated Mathematical Induction Hantao Zhang,2012-12-06 It has been shown how the common structure that defines a family of proofs can be expressed as a proof plan 5 This common structure can be exploited in the search for particular proofs A proof plan has two complementary components a proof method and a proof tactic By prescribing the structure of a proof at the level of primitive inferences a tactic 11 provides the guarantee part of the proof In contrast a method provides a more declarative explanation of the proof by means of preconditions Each method has associated effects The execution of the effects simulates the application of the corresponding tactic Theorem proving in the proof planning framework is a two phase process 1 Tactic construction is by a

process of method composition Given a goal an applicable method is selected The applicability of a method is determined by evaluating the method s preconditions The method effects are then used to calculate subgoals This process is applied recursively until no more subgoals remain Because of the one to one correspondence between methods and tactics the output from this process is a composite tactic tailored to the given goal 2 Tactic execution generates a proof in the object level logic Note that no search is involved in the execution of the tactic All the search is taken care of during the planning process The real benefits of having separate planning and execution phases become appar ent when a proof attempt fails **Diana Ross**

ECOOP '93 - Object-Oriented Programming Oscar M. Nierstrasz,2003-05-16 It is now more than twenty five years since object oriented programming was inve ed actually more than thirty years since work on Simula started but by all accounts it would appear as if object oriented technology has only been discovered in the past ten years When the first European Conference on Object Oriented Programming was held in Paris in 1987 I think it was generally assumed that Object Oriented Progr ming like Structured Programming would quickly enter the vernacular and that a c ference on the subject would rapidly become superfluous On the contrary the range and impact of object oriented approaches and methods continues to expand and spite the inevitable oversell and hype object oriented technology has reached a level of scientific maturity that few could have foreseen ten years ago Object oriented technology also cuts across scientific cultural boundaries like p haps no other field of computer science as object oriented concepts can be applied to virtually all the other areas and affect virtually all aspects of the software life cycle So in retrospect emphasizing just Programming in the name of the conference was perhaps somewhat short sighted but at least the acronym is pronounceable and easy to rem ber This year s ECOOP

attracted 146 submissions from around the world making the selection process even tougher than usual The selected papers range in topic from programming language and database issues to analysis and design and reuse and from experience reports to theoretical contributions The Debt Collection Practices Act United States. Congress. House. Committee on Banking, Currency and Housing. Subcommittee on Consumer Affairs,1976 *Graphs and Order* Ivan Rival,2012-12-06 This volume contains the accounts of the principal survey papers presented at GRAPHS and ORDER held at Banff Canada from May 18 to May 31 1984 This conference was supported by grants from the N A T O Advanced Study Institute programme the Natural Sciences and Engineering Research Council of Canada and the University of Calgary We are grateful for all of this considerable support Almost fifty years ago the first Symposium on Lattice Theory was held in Charlottesville U S A On that occasion the principal lectures were delivered by G Birkhoff O Ore and M H Stone In those days the theory of ordered sets was thought to be a vigorous relative of group theory Some twenty five years ago the Symposium on Partially Ordered Sets and Lattice Theory was held in Monterey U S A Among the principal speakers at that meeting were R P Dilworth B Jonsson A Tarski and G Birkhoff Lattice theory had turned inward it was concerned primarily with problems about lattices themselves As a matter of fact the problems that were then posed have by now in many instances been completely solved
