Bleeker,Johannes Geiss,M. Huber,2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end The Century of Space Science a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar L st and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection *Giant Planets of Our Solar System* Patrick Irwin,2003 This book reviews the current state of knowledge of the atmospheres of the giant gaseous planets Jupiter Saturn Uranus and Neptune The current theories of their formation are reviewed and their recently observed temperature composition and cloud structures

are contrasted and compared with simple thermodynamic radiative transfer and dynamical models The instruments and techniques that have been used to remotely measure their atmospheric properties are also reviewed and the likely development of outer planet observations over the next two decades is outlined

Neptune and Triton Dale P. Cruikshank, Mildred Shapley Matthews, A. M. Schumann, 1995-11 The first reconnaissance of all the major planets of the Solar System culminated in the Voyager 2 encounter with Neptune in August 1989 Neptune itself was revealed as a planet with gigantic active storms in its atmosphere and off center magnetic field and a system of tenuous lumpy rings Whereas only two satellites were known prior to the encounter Voyager discovered six more Triton the largest satellite was revealed as a frozen icy world with clouds and layers of haze and with vertical plumes of particles reaching five miles into the thin atmosphere This latest Space Science Series volume presents the current level of understanding of Neptune its rings and its satellites derived from the data received from the Voyager The book's chapters are written by the world's leading authorities on various aspects of the Neptune system and are based on papers presented at an international conference held in January 1992 Covering details of Neptune's interior atmosphere rings magnetic fields and near space environment as well as the small satellites and the remarkable moon Triton this volume is a unique resource for planetary scientists and astronomers requiring a comprehensive analysis of Neptune viewed in the context of our knowledge of the other giant planets Until another spacecraft is sent to Neptune Neptune and Triton will stand as the basic reference on the planet
