World Economic and Financial Surveys, 1988 International Monetary Fund, 1988-01-01. This paper examines the World Economic Outlook forecasting record for the principal performance indicators for the major industrial countries and corresponding aggregates and for groups of non oil developing countries. Several criteria were used in evaluating the forecasts: the computation and evaluation of various summary statistics of forecast accuracy, bias and efficiency, comparisons with alternative forecasts, naive forecasts and forecasts produced by the Organization for Economic Cooperation and Development (OECD) and by national forecasting agencies, the examination of turning point errors and forecast performance in defined episodes and finally some attempt to explain forecast error in terms of unanticipated developments in policy variables and oil prices. In judging the forecast performance of the World Economic Outlook, a number of points must be kept in mind. Most important, it has to be recognized that the period since the inception of the World Economic Outlook as a regular forecasting exercise has been extraordinarily rich in economic upheavals which have made the odds against accurate forecasting formidable.

Debunkery Kenneth L. Fisher, 2010-09-09. Legendary money manager Ken Fisher outlines the most common and costly mistakes investors make. Small cap stocks are best for all time. Bunk: A trade deficit is bad for markets. Bunk: Stocks can't rise on high unemployment. Bunk: Many investors think they are safest following widely accepted

Wall Street wisdom but much of Wall Street wisdom isn't so wise. In fact it can be costly bunk. In *Debunkery: Learn It, Do It, and Profit From It: Seeing Through Wall Street's Money-Killing Myths*, Ken Fisher named one of the 30 most influential individuals of the last three decades by *Investment Advisor* magazine. Details why so many investors fail to get the long-term results they desire. The short answer is many investors fail to question if what they believe is true and are therefore blinded by tradition, biases, ideology, or any number of cognitive errors. Your goal as an investor shouldn't be to be error-free; that's impossible. Rather, to be more successful, you should aim to lower your error rate. *Debunkery* gets you started by debunking 50 common myths, but that's just the beginning. It also gives you the tools you need to continue to do your own debunkery for the rest of your investing career. [Handbook of the Economics of Finance](#) George M. Constantinides, Milton Harris, Rene M. Stulz, 2013-02-08. For those who seek authoritative perspectives and important details, this volume shows how the boundaries of asset pricing have expanded and at the same time have grown sharper and more inclusive. Offers analyses by top scholars of recent asset pricing scholarship. Explains how the 2008 financial crises affected theoretical and empirical research. Through the research and analysis of two scholars who are experts in this field, this volume presents the key issues that are paramount to investors, including whether or not to use historical data as a method of equity investing and can the equity premium reflect changes in fundamental values and cash flows of the market.
