Bone Marrow In Hypoxia And Rebound:

Bone Marrow in Hypoxia and Rebound Joseph Mendel Yoffey,1976 *Haemopoietic Stem Cells* G. E. W. Wolstenholme, Maeve O'Connor,2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **Pathophysiology of Blood Disorders** C. Hershko,G. Izak,1979-06-29 **The Immunologic Revolution** Andor Szentivanyi,Herman Friedman,2024-11-15 This unique volume contains reviews by some of the most prominent immunologists in the world The authors present vital facts for each of their areas of expertise and provide individual perspectives on how their own contributions were developed and how these contributions influenced general immunological thinking and development This impressive collection of personal reviews by these internationally renowned immunologists makes The Immunologic Revolution an important and lasting contribution to the entire biomedical community Bone Marrow Reactions Joseph Mendel Yoffey,1966 **Experimental Hematology Today** S. J. Baum,G. D. Ledney,2013-03-12 It is perhaps not too much of an exaggeration to claim that experimental hematology as it flourishes today originated largely from the pioneering attempts to protect lethally radiated animals 1 by shielding of hemopoietic tissues by L O Jacobson 9 and 2 by treatment with bone marrow suspensions by E Lorenz and his col laborators 12 The site chosen for this annual meeting of the International Society for Experi mental Hematology is given a special historic sig nificance by the fact that it was 25 years ago that the first publication on this subject by Lorenz ap peared from his laboratory at the National Insti tutes of Health Lorenz s discovery marked the beginning of a period which lasted until 1956 during which the protection afforded by hemopoietic cell suspensions was confirmed by many This soon led to an intensive scientific de bate on the mechanism of this protective effect was it due to a humoral factor produced and pro vided by the bone marrow as Lorenz The Appearance of postulated or to transplantation and subsequent proliferation of hemop etic cells This question was defini 1 the Multipotential tively answered in 1956 by evidence from three different laboratories 7 15 26 which demonstrated the origin of the cells Hemopoietic in the repopulated tissues using a variety of cellu lar and immunologic markers By the same token these contributions marked the birth of radiation Stem Cell chimeras **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1974 First multi year cumulation covers six years 1965 70 **Cumulated Index Medicus** ,1972 Iron Metabolism Ivan Bernat,2012-12-06 **Physiology** Sherwood M. Reichard,James P. Filkins,2013-03-09 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate system of cells and molecular moieties derived from those cells which constitute the RES It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic

system or the lymphoreticular system Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual volumes are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies

Mononuclear Phagocytes R. van Furth, 2013-04-17 Mononuclear phagocytes which include macrophages monocytes and their precursor cells are the most important cells in the host defence against micro organisms and tumor cells During the last twenty five years research on the biology of mononuclear phagocytes has increased tremendously This motivated Professor R van Furth to organize five international conferences on this subject in Leiden the Netherlands The edited proceedings of these meetings were published in 1970 Mononuclear Phagocytes in 1975 Mononuclear Phagocytes in Immunity Infections and Pathology in 1980 Mononuclear Phagocytes Functional Aspects and in 1985 Mononuclear Phagocytes Characteristics Physiology and Function Reviews of these volumes published in international journals praised them as the most up to date state of the art publications The publication of 1991 includes 88 chapters written by more than 200 authors

Cerebrovascular Bibliography, 1964 **International Review of Cytology**, 1980-03-05 International Review of Cytology **Biochemical Pharmacology of Blood and Bloodforming Organs** James W. Fisher, 2012-12-06 The subject of this volume is to review chemical agents which affect blood and blood forming organs Significant advances made over the past several years in the purification of several hematopoietic growth factors such as erythropoietin and colony stimulating factor the availability of several other growth factors such as the interleukins which are important in regulating the production of red blood cells leukocytes megakaryocytes and platelets are discussed Numerous toxic chemical substances are being produced in our environment which people are exposed to daily causing a suppression of erythropoiesis myelopoiesis and megakaryocytopoiesis Attempts to evaluate both the therapeutic role of some of the newer growth factors such as erythropoietin in the anemia of end stage disease as well as colony stimulating factors in some hematopoietic abnormalities are also covered in this volume In addition numerous chemical factors in our environment which suppress major hematopoietic lineages stimulated by erythropoietin macrophage colony stimulating factor granulocyte colony stimulating factor interleukin 1 alpha 1 beta 2 3 4 5 6 and 7 are also included In addition chapters on the use of erythropoietin in the treatment of anemia of end stage renal disease can provide the practicing hematologist
