Natural Enemies John Knight,2013-01-11 Wild animals raid crops attack livestock and sometimes threaten people Conflicts with wildlife are widespread assume a variety of forms and elicit a range of human responses Wildlife pests are frequently demonized and resisted by local communities while routinely controlled by state authorities However to the great concern of conservationists the history of many people wildlife conflicts lies in human encroachment into wildlife territory In *Natural Enemies* the authors place the analytical focus on the human dimension of these conflicts an area often neglected by specialists in applied ecology and wildlife management and on their social and political contexts Case studies of specific conflicts are drawn from Africa Asia Europe and America and feature an assortment of wild animals including chimpanzees elephants wild pigs foxes bears wolves pigeons and ducks These anthropologists challenge the narrow utilitarian view of wildlife pestilence by revealing the cultural character of many of our natural enemies Their reports from the front line expose one fact human conflict with wildlife is often an expression of conflict between people
