Fuzzy Decision Making in

Modeling and Control Joao M. C. Sousa, 2002 Decision making and control are two fields with distinct methods for solving problems and yet they are closely related This book bridges the gap between decision making and control in the field of fuzzy decisions and fuzzy control and discusses various ways in which fuzzy decision making methods can be applied to systems modeling and control Fuzzy decision making is a powerful paradigm for dealing with human expert knowledge when one is designing fuzzy model based controllers The combination of fuzzy decision making and fuzzy control in this book can lead to novel control schemes that improve the existing controllers in various ways The following applications of fuzzy decision making methods for designing control systems are considered OCo Fuzzy decision making for enhancing fuzzy modeling The values of important parameters in fuzzy modeling algorithms are selected by using fuzzy decision making OCo Fuzzy decision making for designing signal based fuzzy controllers The controller mappings and the defuzzification steps can be obtained by decision making methods OCo Fuzzy design and performance specifications in model based control Fuzzy constraints and fuzzy goals are used OCo Design of model based controllers combined with fuzzy decision modules Human operator experience is incorporated for the performance specification in model based control The advantages of bringing together fuzzy control and fuzzy decision making are shown with multiple examples from real and simulated control systems

Decision Science and Technology James Shanteau, Barbara A. Mellers, David A. Schum, 2012-12-06 Decision Science and Technology is a compilation of chapters written in honor of a remarkable man Ward Edwards Among Ward s many contributions are two significant accomplishments either of which would have been enough for a very distinguished career First Ward is the founder of behavioral decision theory This interdisciplinary discipline addresses the question of how people actually confront decisions as opposed to the question of how they should make decisions Second Ward laid the groundwork for sound

normative systems by noticing which tasks humans can do well and which tasks computers should perform This volume organized into five parts reflects those accomplishments and more The book is divided into four sections Behavioral Decision Theory examines theoretical descriptions and empirical findings about human decision making Decision Analysis examines topics in decision analysis Decision in Society explores issues in societal decision making The final section Historical Notes provides some historical perspectives on the development of the decision theory Within these sections major multidisciplinary scholars in decision theory have written chapters exploring some very bold themes in the field as an examination of the book's contents will show The main reason for the health of the Decision Analysis field is its close links between theory and applications that have characterized it over the years In this volume the chapters by Barron and Barrett Fishburn Fryback Keeney Moreno Pericchi and Kadane Howard Phillips Slovic and Gregory Winkler and above all von Winterfeldt focus on those links Decision science originally developed out of concern with real decision problems and applied work such as is represented in this volume will help the field to remain strong

Human-Like Decision Making and Control for Autonomous Driving Peng Hang, Chen Lv, Xinbo Chen, 2022-07-25 This book details cutting edge research into human like driving technology utilising game theory to better suit a human and machine hybrid driving environment Covering feature identification and modelling of human driving behaviours the book explains how to design an algorithm for decision making and control of autonomous vehicles in complex scenarios Beginning with a review of current research in the field the book uses this as a springboard from which to present a new theory of human like driving framework for autonomous vehicles Chapters cover system models of decision making and control driving safety riding comfort and travel efficiency Throughout the book game theory is applied to human like decision making enabling the autonomous vehicle and the human driver interaction to be modelled using noncooperative game theory approach It also uses game theory to model collaborative decision making between connected autonomous vehicles This framework enables human like decision making and control of autonomous vehicles which leads to safer and more efficient driving in complicated traffic scenarios The book will be of interest to students and professionals alike in the field of automotive engineering computer engineering and control engineering

Kretowski, 2019-06-05 This book presents a unified framework based on specialized evolutionary algorithms for the global induction of various types of classification and regression trees from data The resulting univariate or oblique trees are significantly smaller than those produced by standard top down methods an aspect that is critical for the interpretation of mined patterns by domain analysts The approach presented here is extremely flexible and can easily be adapted to specific data mining applications e g cost sensitive model trees for financial data or multi test trees for gene expression data The global induction can be efficiently applied to large scale data without the need for extraordinary resources With a simple

GPU based acceleration datasets composed of millions of instances can be mined in minutes In the event that the size of the datasets makes the fastest memory computing impossible the Spark based implementation on computer clusters which offers impressive fault tolerance and scalability potential can be applied

Fox,2024-11-08 This unique book presents decision analysis in the context of mathematical modeling and game theory The author emphasizes and focuses on the model formulation and modeling building skills required for decision analysis as well as the technology to support the analysis The primary objective of Decision Analysis through Modeling and Game Theory is illustrative in nature It sets the tone through the introduction to mathematical modeling The text provides a process for formally thinking about the problem and illustrates many scenarios and illustrative examples These techniques and this approach center on the fact a decision makers at all levels must be exposed to the tools and techniques available to help them in the decision process b decision makers as well as analysts need to have and use technology to assist in the entire analysis process c the interpretation and explanation of the results are crucial to understanding the strengths and limitations of modeling and d the interpretation and

use of sensitivity analysis is essential The book begins with a look at decision making methods including probability and statistics methods under risk of uncertainty It moves to linear programming and multi attribute decision making methods with a discussion of weighting methods Game theory is introduced through conflict games and zero sum or constant sum games Nash equilibriums are next followed by utility theory Evolutionary stable strategies lead to Nash arbitration and cooperation methods and N person methods presented for both total and partial conflict games Several real life examples and case studies using game theory are used throughout This book would be best used for a senior level course in mathematics operations research or graduate level courses or decision modeling courses offered in business schools The book will be of interest to departments offering mathematical modeling courses with any emphasis on modeling for decision making

Decision Systems and Nonstochastic Randomness V. I. Ivanenko, 2010-05-17 Decision Systems and Non stochastic Randomness is the first systematic presentation and mathematical formalization including existence theorems of the statistical regularities of non stochastic randomness The results presented in this book extend the capabilities of probability theory by providing mathematical techniques that allow for the description of uncertain events that do not fit standard stochastic models The book demonstrates how non stochastic regularities can be incorporated into decision theory and information theory offering an alternative to the subjective probability approach to uncertainty and the unified approach to the measurement of information This book is intended for statisticians mathematicians engineers economists or other researchers interested in non stochastic modeling and decision theory
