100 Cases for Medical Data Interpretation David Howlett, Nicola Gainsborough, 2013-01-22 Data interpretation questions based on clinical cases are a popular means of testing medical students both during undergraduate studies and as an element of finals examinations Written by a small team of authors with extensive teaching experience *100 Cases in Medical Data Interpretation* provides invaluable guidance from lecturers who understand f *100 Cases in Acute Medicine* Kerry Layne, Henry Fok, Adam Nabeebaccus, 2012-06-29 A 32 year old Caucasian lady was admitted to hospital following a collapse at the gym Her friends described the patient falling to the floor while exercising on the rowing machine followed by twitching of her arms and legs and a period of being unrousable You are the medic on duty *100 Cases in Acute Medicine* presents 100 acute conditions commonly seen by medical students and junior doctors in the emergency department or on the ward or in the community setting A succinct summary of the patient s history examination and initial investigations including photographs where relevant is followed by questions on the diagnosis and management of each case The answer includes a detailed discussion of each topic with further illustration where appropriate providing an essential revision aid as well as a practical guide for students and junior doctors Making clinical decisions and choosing the best course of action is one of the most challenging and difficult parts of training to become a doctor These cases will teach students and junior doctors to recognize important clinical symptoms and signs and to develop their diagnostic and management skills *Advances In Geosciences (A 4-volume Set) - Volume 6: Hydrological Science (Hs)* Namsik Park, 2007-07-09 *Advances in Geosciences* is the result of a concerted effort in bringing the latest results and planning activities related to earth and space science in Asia and the international arena The volume editors are all leading scientists in their research fields covering six sections Hydrological Science HS Planetary Science PS Solar Terrestrial ST Solid Earth SE Ocean Science OS and Atmospheric Science AS The main purpose is to highlight the scientific issues essential to the study of earthquakes tsunamis atmospheric dust storms climate change drought flood typhoons monsoons space weather and planetary exploration *Atlas of PET-CT* Stefano Fanti, Mohsen Farsad, Luigi Mansi, Paolo Castellucci, 2019-02-06 This new atlas the fourth of a successful series is a completely revised and updated edition of a previously published FDG PET CT atlas In the past few years considerable progress has been made in the field of PET CT imaging and this new edition takes full account of these recent developments Furthermore its educational mission has been broadened beyond serving as a straightforward guide to FDG PET CT imaging it now encompasses the integrative use of contrast enhanced CT and MRI The new edition also includes non oncological indications for FDG PET CT The atlas aims to help imaging practitioners to recognize physiological and benign pathological FDG uptake and illustrates in a case based practical manner the PET CT appearances of all the major tumors and infectious inflammatory and neurodegenerative disorders The main clinical applications are covered and learning points and pitfalls are clearly articulated The consistent user friendly format facilitates image interpretation and allows rapid review of key

information needed for FDG PET CT imaging *Participation in EU Rule-making* Joana Mendes, 2011-04-07 The limited scope of participation in the making of EU law remains a continued source of controversy featuring prominently in recent institutional and political developments that have been shaping the EU's constitutional framework most intensely in the follow up of the Commission's White Paper on Governance Yet little attention has been paid to participation rights as a means of ensuring the procedural protection of persons affected by EU regulation in its diverse forms This is a dimension of the rule of law that has been largely ignored by EU legislative and judicial bodies Not only the legislator but also the Court of Justice and the Court of First Instance tend to adhere to excessively formal conceptions of participation rights that are premised on the right to be heard in individual procedures as well as to a restrictive view regarding the relationships between the citizens and the administration This book shows why in the face of new regulatory developments these conceptions are currently inadequate to ensure the legal protection of rights and interests affected by EU regulation Combining a conceptual analysis with thorough empirical scrutiny this book assesses the scope of participation rights in EU law against their rationales and underlying legal values It makes a case for the extension of participation rights to new situations and new types of procedures in particular those that would generally fall within the category of rulemaking It brings distinct normative insights into a crucial theme of EU administrative law and makes a topical and timely contribution to the increasingly notable theme of public participation in EU regulation Joanna Mendes 2009 thesis upon which *Participation in EU Rule Making* is based was awarded the the European University Institute Florence Mauro Cappelletti Prize for the best doctoral thesis using a methodology of comparative law **Deference in International Courts and Tribunals** Lukasz Gruszczynski, Wouter G. Werner, 2014 International courts use two key methodologies to determine the degree of deference granted to states in their implementation of international obligations the standard of review and margin of appreciation This book investigates how these doctrines are applied in international courts analysing where their approaches converge and diverge **Efficiency of heat and work in a regional energy system** Tommy Rosén, 2019-12-11 One of the largest flows of energy in Swedish municipalities is the fuel energy flow through the regional combined heat and power CHP plant The customer products from this flow are mainly electricity to the electricity grid and heat to the building sector There are many ways to describe and examine this fuel energy flow and there are many perspectives This thesis presents one perspective It is a top down analytical and numerical perspective on the efficiency of heat and work in a regional energy system The analysis focus on the present situation in Linköping municipality and aims at describing the energy efficiency improvement potential Three subsystems are considered the regional production of electricity the regional production of heat and the regional public transport by bus These three systems are physically all heat engines i.e. engines that derive work and/or heat from fuel combustion processes It is important to notice that the analysis in this thesis does not describe the theoretical improvement potential that potential is considerably higher than the implementable potential but of no practical use Instead the analysis is

as far as possible based on real world measured efficiencies and efficiency values of best practice Best available technology The analysis shows that hardware investments at the CHP plant can improve the electricity generation efficiency and thereby reduce CO₂ emissions The investments are in high pressure turbines medium pressure turbines and preheaters The size of the improvement is hard to quantify because it depends partly on unknown factors in the surrounding electricity market In the studied system CO₂ reduction could be as high as 40-60 % The regionally produced biogas would be used more efficiently if it were used in the local combined cycle gas turbine instead of being used in internal combustion engines in buses The buses would instead be electrically driven This use of biogas would create a better integrated fuel energy flow and reduce heat losses Another improvement is to reduce the system temperatures in the district heating system The study shows that the efficiency gains because of lower system temperatures would increase electricity production by about 1-3% and that greenhouse gas emissions would be reduced by 4-20% However these improvements are dependent on demand side investments in the district heating system and are therefore slow to implement

Intelligent Data Analytics for Power and Energy Systems Hasmat Malik, Md. Waseem Ahmad, D.P. Kothari, 2022-02-17

This book brings together state-of-the-art advances in intelligent data analytics as a driver of the future evolution of Power and Energy (PaE) systems. In the modern power and energy PaE domain, the increasing penetration of renewable energy sources (RES) and the consequent empowerment of consumers as a central and active solution to deal with the generation and development variability are driving the PaE system towards a historic paradigm shift. The small-scale diversity and especially the number of new players involved in the PaE system potentiate a significant growth of generated data. Moreover, advances in communication between IoT devices and M2M (machine-to-machine) man-to-machine

etc and digitalization hugely increased the volume of data that results from PaE components installations and systems operation This data is becoming more and more important for PaE systems operation maintenance planning and scheduling with relevant impact on all involved entities from producers consumer s and aggregators to market and system operators However although the PaE community is fully aware of the intrinsic value of those data the methods to deal with it still necessitate substantial enhancements development and research Intelligent data analytics is thereby playing a fundamental role in this domain by enabling stakeholders to expand their decision making method and achieve the awareness on the PaE environment The editors also included demonstrated codes for presented problems for better understanding for beginners
