The Qur'an Oliver Leaman, 2006-05-02 A RUSA 2007 Outstanding Reference Title The Qur'an is the source of inspiration for one of the

world's major religions followed today by over a billion people. It plays a central role in Islam and ever since it appeared fourteen hundred years ago has been the subject of intense debate. Some of this has been carried out by Muslims and some by those hostile or indifferent to Islam producing a very wide range of views. Authored by forty three international experts the objective of *The Qur'an: An Encyclopedia* is to present this diversity of thought approach and school without priority in order to give a strong appreciation of the range of response that the text has provoked throughout its history and providing students and researchers with a powerful one volume resource covering all aspects of the text and its reception. Islam and the Qur'an are much in the news today and there is a public debate going on in which things are said about the Qur'an without much knowledge or understanding of the book. Every effort has been made to help the reader use the Encyclopedia as an investigative tool in Quranic studies. The volume assumes no previous knowledge of the Qur'an, Islam or Arabic. Technical terms are explained in the text itself and the style of each entry is designed to be as self contained as possible. Entries are cross referenced and many include a brief bibliography. At the end of the work there is a substantial annotated bibliography providing a detailed guide to the most significant books, journals and articles in Quranic Studies. There is a full index. The readership will include those seeking basic information on the Qur'an however the substantial number of longer entries means that it will also be used by specialists.

Computer-Supported Collaborative Learning Frank Fischer, Ingo Kollar, Heinz Mandl, Jörg M. Haake, 2007-04-08. Research on Computer Supported Collaborative Learning (CSCL) is a multidisciplinary field located at the intersection of cognitive psychology, computer science and education. Yet the different epistemological and theoretical backgrounds of these disciplines often make fruitful exchange between them difficult. CSCL urgently needs to develop and use boundary concepts that can bring these fields closer together to improve cumulative research and development of computer supported learning environments. *Scripting Computer Supported Collaborative Learning* focuses on one term with the potential to become a real boundary concept in CSCL. *Scripting Computer Supported Collaborative Learning* which has collected advanced script approaches demonstrates the opportunities for using synergy to apply the script concept between perspectives and interdisciplinary CSCL approaches to scripting. This volume represents the state of the art of research on scripting computer supported collaborative learning and provides a starting point for the development of a common understanding of scripting in CSCL. Research on collaboration scripts has an extraordinary potential for advancing the multidisciplinary endeavor of CSCL research and this book provides a rich basis for further exploring and realizing this potential. As such it will be a valuable resource for research, development and teaching.
