Social Science Quotations David L. Sills, Robert King Merton, 2000 The use of quotations in scientific writings often fails to capture the force of formulations that made the quotations memorable In this reference work the date and source of each quotation serve to help place them in

their larger contexts making it useful in examining the discipline's history

Social Science Quotations Robert Merton, 2018-04-27 Social Science Quotations has been prepared to meet an evident unmet need in the literature of the social sciences. Writings on the lives and theories of individual social scientists abound but there has been no fully documented collection of memorable quotations from the social sciences as a whole. The frequent use of quotations in scientific as well as literary writings that are mere summaries or paraphrases typically fail to capture the full force of formulations that have made quotations memorable. This book of quotations invites the further reading or rereading of the original texts beyond the quotations themselves. Sills and Merton draw extensively upon the writings that constitute the historical core of the social sciences and social thought; those works with staying power often described as the classical texts. Many quotations have been drawn from these classical texts because the quotations contain memorable ideas memorably expressed. Both consequential and memorable, these words have been quoted over the generations entering into the collective memory of social scientists everywhere and at times diffusing into popular thought and into the vernacular as well. This book is useful to social scientists, anthropologists, economists, historians, political scientists, psychiatrists, psychologists, sociologists, and statisticians and for all who want to learn or verify memorable formulations and phrases concerning social thought and social theories. It is particularly useful for graduate students taking courses that examine the history of their discipline.

Complexity Theory and the Social Sciences David Byrne, 2002-01-04 Chaos and complexity are the new buzz words in both science and contemporary society. The ideas they represent have enormous implications for the way we understand and engage with the world. Complexity Theory and the Social Sciences introduces students to the central ideas which surround the chaos/complexity theories. It discusses key concepts before using them as a way of investigating the nature of social research. By applying them to such familiar topics as urban studies, education, and health, David Byrne allows readers new to the subject to appreciate the contribution which complexity theory can make to social research and to illuminating the crucial social issues of our day.

A Dictionary of Scientific Quotations Alan L. Mackay, 1991-01-01 Science affects us all in the words of Albert Einstein: "The whole of science is nothing more than a refinement of everyday thinking." It is therefore fascinating to discover the thoughts of scientists, philosophers, humanists, poets, theologians, politicians, and other miscellaneous mortals on this most important of subjects. *A Dictionary of Scientific Quotations* is a personal selection of scientific quotations by Professor Alan L. Mackay that includes graffiti, lines of song, proverbs, and poetry. Whether you believe that "All problems are finally scientific problems" (George Bernard Shaw) or that "Imagination is more important than knowledge" (Einstein), it is without doubt that it is a good thing for an uneducated man to read books of quotations. Churchill: "You will be charmed and delighted by this collection and remember why said the Dodo: the best way to explain it is to do it." Alice in Wonderland (Lewis Carroll).

Reporting of Social Science in the National Media Carol Weiss, Eleanor Singer, 1988-08-04 Policy makers as well as the general public are often unaware of social science research until a story about it appears in the

national media Even in official Washington a staffer's report on social research may go unnoticed while a report in the Washington Post receives immediate attention This study takes a systematic and revealing look at social science reporting How do journalists hear about social science and why do they select certain stories to cover and not others How do journalistic standards for selection compare with social scientists' own judgments of merit How do reporters attempt to ensure accuracy and how freely do they introduce their own interpretations of social science findings How satisfied are social scientists with the selection and accuracy of social science news In Part I Carol H Weiss addresses these questions on the basis of personal interviews with social scientists and the journalists who wrote about their work Part II by Eleanor Singer is based on an analysis of media content itself and compares social science reporting over time between 1970 and 1982 and across media newspapers newsmagazines television These two complementary perspectives combine to produce a thorough realistic assessment of the way social science moves out of the academy and into the world of news
