The Neuronal Functions of EF-hand Ca(2+)-binding Proteins 2nd Edition Michael R. Kreutz, José R. Naranjo, Karl-Wilhelm Koch, Beat Schwaller, 2016-11-01 Ca² signaling in neurons is characterized by highly restricted and dynamic gradients called Ca² waves spikes transients and puffs depending upon their corresponding spatial and temporal features Based on this strict segmentation the Ca² ion provides a versatile basis for complex signaling in neuronal subcompartments with a spatial resolution of micro and nanodomains The multitude of Ca² regulated processes requires specialized downstream processing machinery translating the Ca² signal into alterations of cellular processes The broad range of different Ca² triggered phenomena in neurons ranging from neurotransmission to gene expression is reflected by the existence of a multitude of different Ca² binding proteins CaBPs from which numerous belong to the EF hand super family EF hand proteins can be subdivided into Ca² buffer and Ca² sensor proteins Whereas the first group has a very high affinity for Ca² exhibits little conformational change in the Ca² bound state and is thought to mainly chelate Ca² the second group has a lower affinity for Ca² and shows considerable conformational changes upon Ca² binding which usually triggers a target interaction Neuronal calcium sensor NCS proteins and the related Caldendrin CaBP Calneuron nCaBPs proteins are members of this latter group They resemble the structure of their common ancestor Calmodulin CaM with four EF hand Ca² binding motifs of which not all are functional However despite their structural homology with CaM NCS as well as nCaBPs are quite diverse in amino acid sequence It is therefore surprising that relatively few binding partners have been identified that are not CaM targets and this raises the question of the specificity and function of these interactions In terms of function binding of NCS and nCaBP has frequently different consequences than binding of CaM which substantially increases the versatility of the Ca² tool kit The general idea of this special issue is to provide an overview on the function of neuronal EF hand calcium binding proteins in health and disease But we will not just provide a mere collection of articles to stress the function of each protein The issue will mainly deal with emerging concepts on Ca² signaling buffering mediated by EF hand Ca² binding proteins This includes questions like features that define the functional role of a EF hand calcium sensor in neurons the conditions that make physiological relevance of a given interaction of a CaBP with its target plausible the emerging synaptic role of these proteins and mounting evidence for their role in the regulation of protein trafficking Structural aspects and biophysical studies will be covered Another aspect will be the role of CaBPs in brain disease states This aspect includes studies showing that CaBPs are targets of drugs in clinical use studies showing that expression levels of calcium binding proteins are frequently altered in brain disease states as well as reports on mutations in EF hand calcium sensors linked to human disease

articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org about contact

Bacterial Transcription Factors and the Cell Cycle, 2nd edition Morigen Morigen, Monika Glinkowska, Jianping Xie, 2022-10-10 Analogous to the eukaryotic G1 S and M phase of the cell cycle the bacterial cell cycle can be classified into independent stages Slowly growing bacterial cells undergo three different stages B C and D phase respectively while the cell cycle of fast growing bacteria involves at least two independent cycles the chromosome replication and the cell division The oscillation in gene expression regulated by transcription factors and proteolysis mediated by ClpXP are closely correlated with progression of the cell cycle Indeed it has been shown that DnaA couples DNA replication initiation with the expression of the two oscillating regulators GcrA and CtrA and the DnaA GcrA CtrA regulatory cascade drives the forward progression of the Caulobacter cell cycle Furthermore it has been found that the DnaA oscillation in Escherichia coli and Caulobacter crescentus plays an important role in the cell cycle coordination RpoS in Coxiella regulates the gene expression involved in the developmental cycle the SigB and SinR transcription factors control whether cells remain in or leave a biofilm responding to metabolic conditions in Bacillus subtilis similarly BolA in most Gram negative bacteria turns off motility and turns on biofilm development as a transcription factor CtrA regulates cell division and outer membrane composition of the pathogen Brucella abortus an essential transcription factor SciP enhances robustness of Caulobacter cell cycle regulation Interestingly transcription factors mediated metabolism fluctuations are also related to progression of the cell cycle It has been shown that CggR and Cra factors are involved in the flux signaling metabolite fructose 1,6-bisphosphate IclR mediates para-hydroxybenzoate catabolism in Streptomyces coelicolor CceR and AkgR regulate central carbon and energy metabolism in alphaproteobacteria and these metabolism changes affect cell growth In line with the argument AspC mediated aspartate metabolism coordinates the E. coli cell cycle However the molecular mechanisms of maintaining the proper cell cycle progression through coordination of transcription factors mediated gene transcription oscillation cellular metabolism with the cell cycle are not yet well established This Research Topic is intended to cover the spectrum of cell cycle regulatory mechanisms in particular the coordination of transcription factor mediated gene transcription oscillations and the cellular metabolisms associated with the cell cycle We welcome all types of articles including Original Research Review and Mini Review The subject areas of interest include but are not limited to 1 Cell cycle coordination through gene expression and expression oscillation mediated by transcription factors 2 Regulation of the cell cycle by proteolysis oscillation 3 Coordination of the cell cycle with metabolism fluctuation 4 DNA methylation fluctuation and the cell cycle 5 Novel transcription factors

and gene expression patterns associated with the cell cycle

Recent Advances in the Understanding of

Hepatocellular Carcinogenesis, 2nd edition Prasanna K. Santhekadur, Bubu Ama Banini, Rohini Mehta, 2024-09-19

Hepatocellular carcinoma HCC is the most common cancer of the liver and the third most cause of cancer related deaths worldwide. The 5 year survival of HCC is less than 20% making HCC the second most lethal malignancy the first being pancreatic cancer. HCC usually occurs in patients with chronic liver disease in association with a variety of risk factors including chronic liver infection with hepatitis B virus or hepatitis C virus, excessive consumption of alcohol, overeating, obesity and nonalcoholic fatty liver disease, other metabolic liver diseases including Wilson's disease, hemochromatosis and alpha 1 antitrypsin deficiency and environmental toxins such as aflatoxins. Tobacco use and human immunodeficiency virus infection also increases the risk of HCC. The heterogeneity of HCC associated with different etiologies affects tumor initiation, development and progression thus limiting the identification of consistent or routinely occurring genetic abnormalities characteristic of this malignancy. Nevertheless, sustained inflammation, hepatocyte regeneration and apoptosis occurring in chronic liver disease results in fibrosis and ultimately cirrhosis favoring genetic and epigenetic modifications that lead to the formation of dysplastic nodules and eventually oncogenesis. Identification of novel diagnostic and prognostic biomarkers for HCC is an unmet need in this current era. The aim of this Research Topic is to provide insights on novel aspects of HCC diagnosis, prognostication and therapy with an emphasis on recent and up to date findings from the scientific literature. Genetic and molecular signatures arising from HCC in association with specific etiologies and implications for cancer screening and surveillance will be discussed. As indicated, sub topics listed below: Original articles, Reviews and Mini Review articles will address all areas of HCC relevant not only to basic and clinical researchers but also to practitioners in various fields of medicine.

- 1 Epidemiology of Hepatocellular carcinoma
- 2 Risk factors for hepatocellular carcinoma
- 3 Nonalcoholic Fatty Liver Disease and Hepatocellular Carcinoma
- 4 Animal models for studying hepatocellular carcinoma
- 5 Hepatocellular Carcinoma Oncogenes
- 6 Tumor suppressors and Novel regulators of Hepatocellular Carcinoma
- 7 MicroRNA and Hepatocellular Carcinoma
- 8 Circulating biomarkers of Hepatocellular Carcinoma

Encyclopedia of Library and Information Science, Second Edition - Miriam Drake, 2003-05-20. A revitalized version of the popular classic, the Encyclopedia of Library and Information Science, Second Edition targets new and dynamic movements in the distribution, acquisition and development of print and online media, compiling articles from more than 450 information specialists on topics including program planning in the digital era, recruitment, information management, advances in digital technology and encoding, intellectual property and hardware, software, database selection and design, competitive intelligence, electronic records, preservation, decision support systems, ethical issues in information, online library instruction, telecommuting and digital library projects.
