Alloying Liquid Metal With Nitrogen From Electric Arc Plasma:

Alloying Liquid Metal with Nitrogen from Electric ARC Plasma V I Lakomskii, 1999 In the monograph the author summarises the results obtained in research and investigations of the gas liquid metal system at temperatures typical of electric arc welding and electrometallurgy processes Special attention is given to the problems of sorption of diatomic homonuclear gases especially nitrogen from electric arc plasma by metal melts It is shown that when the metal absorbs the gas from plasma the system does not reach the thermodynamic equilibrium state Investigations were carried out into processes taking place in the gas plasma layer bordering with the metal These processes determine the gas content of liquid steel

Plasma Chemistry - 2: Plasma Chemistry and Transport Phenomena in Thermal Plasmas A. T. Bell, C. Bonet, 2017-08-31 Plasma Chemistry 2 Plasma Chemistry and Transport Phenomena in Thermal Plasmas presents the proceeding of the Second International Symposium on Plasma Chemistry held in Rome Italy on September 18 23 1975 This book discusses the thermodynamic state of chemically reacting plasmas which are generally described by Pauli or Boltzmann kinetic equations Organized into eight chapters this compilation of papers begins with an overview of the influence of the plasma state by a superimposed laser radiation field This text then examines the mechanisms of chemical transformations in electric discharges Other chapters consider the successful exploitation of thermal plasmas in the field of high temperature chemistry This book discusses as well the status of plasma processes involving mass transfer and heat with reference to the processes of condensation vaporization and chemical reaction The final chapter deals with plasma heating and spraying of various materials This book is a valuable resource for chemists metallurgists and scientists

Arc-slag Remelting of Steel and Alloys B. I. Medovar, 1996 The book describes the method of remelting consumable electrodes with an electric arc burning between the surface of a liquid slag bath and a consumable electrode in a water cooled copper mould The method combines the possibilities of treatment of liquid metal with the electric arc in the gas atmosphere and the liquid slag and the advantages of plasma arc and electro slag remelting The technological possibilities

design features of melting systems and results of experimental and industrial melting trials of steels and alloys are described. In addition to remelting structural steels special attention is given to the possibility of alloying the metal with nitrogen from the gas phase without using expensive nitrogen bearing nonmetallic compounds e.g. silicon nitride. It is shown that arc slag remelting can also be used efficiently in producing ingots of titanium and its alloys. The results obtained in this method are compared with electro slag remelting and plasma arc remelting. Data on energy consumption and metal quality are also presented.

Materials for Nuclear Plants Wolfgang Hoffelner, 2012-09-21 The clamor for non carbon dioxide emitting energy production has directly impacted on the development of nuclear energy. As new nuclear plants are built plans and designs are continually being developed to manage the range of challenging requirements and problems that nuclear plants face especially when managing the greatly increased operating temperatures, irradiation doses and extended design life spans. *Materials for Nuclear Plants From Safe Design to Residual Life Assessments* provides a comprehensive treatment of the structural materials for nuclear power plants with emphasis on advanced design concepts. *Materials for Nuclear Plants From Safe Design to Residual Life Assessments* approaches structural materials with a systemic approach. Important components and materials currently in use as well as those which can be considered in future designs are detailed whilst the damage mechanisms responsible for plant ageing are discussed and explained. Methodologies for materials characterization, materials modeling and advanced materials testing will be described including design code considerations and non destructive evaluation concepts. Including models for simple system dynamic problems and knowledge of current nuclear power plants in operation. *Materials for Nuclear Plants From Safe Design to Residual Life Assessments* is ideal for students studying postgraduate courses in Nuclear Engineering. Designers on courses for code development such as ASME or ISO and nuclear authorities will also find this a useful reference.

Welding Metallurgy Sindo Kou, 2020-10-06 Discover the extraordinary progress that welding metallurgy has experienced over the last two decades. *Welding Metallurgy* 3rd Edition is the only complete compendium of recent and not so recent developments in the science and practice of welding metallurgy. Written by Dr Sindo Kou this edition covers solid state welding as well as fusion welding which now also includes resistance spot welding. It restructures and expands sections on Fusion Zones and Heat Affected Zones. The former now includes entirely new chapters on microsegregation, macrosegregation, ductility, dip cracking and alloys resistant to creep, wear and corrosion as well as a new section on ternary alloy solidification. The latter now includes metallurgy of solid state welding. Partially Melted Zones are expanded to include liquation and cracking in friction stir welding and resistance spot welding. New chapters on topics of high current interest are added including additive manufacturing, dissimilar metal joining, magnesium alloys and high entropy alloys and metal matrix nanocomposites. Dr Kou provides the reader with hundreds of citations to papers and articles that will further enhance the reader's knowledge of this voluminous topic. Undergraduate students, graduate students, researchers and mechanical engineers will all benefit.
