**Comparative Environmental Politics** Jerry McBeath, Jonathan Rosenberg, 2006-07-10 While we cannot hope to provide definitive answers to these questions as political scientists we proceed from the assumption that much can be learned through the application of the existing tools of comparative political analysis Two of the incidents occurred in developing countries one a parliamentary democracy the other a democratizing presidential system and one occurred in a highly developed presidential democracy All three countries are federal systems with multiple layers of environmental regulation although sub national government seems to be better institutionalized and more effective in the United States Only one of the incidents occurred within the sovereign territory of a country with an effective federal environmental protection agency and highly transparent policy and judicial processes None of the three nation states involved has a strong green political party And the affected communities in all three cases remain dissatisfied with the outcomes to varying degrees What can we make of these observations Is there a systematic relationship between them or any other political social cultural or economic factors and the responses to environmental crises by nation states To answer these questions a more systematic analysis of the attendant political processes is needed Only then can we suggest whether hope or despair is a more appropriate reaction 1 2 Global Environmental Issues Since the 1960s environmental issues have entered the agendas of most nation states Pollution of land air and water have endangered ecosystems and public health and called for a governmental response

**Mountains: Sources of Water, Sources of Knowledge** Ellen Wiegandt, 2007-12-20 This book addresses the major challenges in assuring globally sustainable water use It examines critical contemporary and global issues through the lens of global change processes and with a focus on mountain regions In doing so it aims to bring state of the art science from numerous disciplines to bear on important environmental and policy questions related to water resources The volume will be a boon to a range of readers from environmental scientists to hydrologists

**Microwave Radiometry of Vegetation Canopies** Alexander A. Chukhlantsev, 2006-07-18 Research into microwave radiation from the

Earth's surface in the presence of vegetation canopies as well as the development of algorithms for retrieval of soil and vegetation parameters from microwave radiometric measurements have been actively conducted for the last 30 years by scientific groups worldwide. The capability of the microwave radiometric method to determine soil moisture and vegetation biometric indices was revealed 25 years ago by the author and his colleagues. Soil moisture and vegetation covers play a key role in the hydrological cycle and in water and energy transfer on the border of land surface and atmosphere through evaporation and transpiration. Accomplishment of large international projects shows that microwave radiometry of soil and vegetation has become an instrument of practical application and operational use. A systematic account of questions concerning the microwave radiometry of the Earth's surface in the presence of vegetation canopies is the main objective of the book.

**Viability Theory** Jean-Pierre Aubin, Alexandre M. Bayen, Patrick Saint-Pierre, 2011-07-13. Viability theory designs and develops mathematical and algorithmic methods for investigating the adaptation to viability constraints of evolutions governed by complex systems under uncertainty that are found in many domains involving living beings from biological evolution to economics from environmental sciences to financial markets from control theory and robotics to cognitive sciences. It involves interdisciplinary investigations spanning fields that have traditionally developed in isolation. The purpose of this book is to present an initiation to applications of viability theory explaining and motivating the main concepts and illustrating them with numerous numerical examples taken from various fields.

**Carbon Inventory Methods** N.H. Ravindranath, Madelene Ostwald, 2007-12-03. Carbon Inventory Methods Handbook fills the need for a handbook that provides guidelines and methods required for carbon inventory. It provides detailed step by step information on sampling procedures field and laboratory measurements application of remote sensing and GIS techniques modeling and calculation procedures along with sources of data for carbon inventory. The book is driven by a growing need for carbon inventory for land use sections such as forests.

**Essays on Longtermism** Hilary Greaves, Jacob Barrett, David Thorstad, 2025-09-02. This is an open access title. It is available to read and download as a free PDF version on Oxford Academic and is made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 International licence. Longtermism broadly speaking is the view that positively influencing the long term future is one of the key moral priorities of our time. Calls for taking a long term view towards global problems such as climate change and poverty are familiar typically urging us to plan on a scale of decades or perhaps a century. By contrast longtermism asks us to take seriously the idea that what we should do right now may depend on the effects of our actions thousands even millions of years into the future. Essays on Longtermism brings together leading scholars to discuss four sets of overlapping questions raised by the longtermist approach. First should we accept some

version of longtermism Second to what extent can we predict and control the far future Third which ethical priorities are recommended by longtermism and how revisionary are they Finally what implications would longtermism have for the design or reform of social political and legal institutions Contributors who include both supporters and critics of longtermism are drawn from a range of disciplines including philosophy economics psychology law political science and mathematics and from private industry

*Hacia el Futuro* Maria Eugenia Ibarrarán,Roy Boyd,2006-09-09 The past 25 years have witnessed an increasing worldwide concern over the issue of climate change and the specter of immense environmental and economic damage which would accompany unmitigated global warming trends National governments in the industrialized world along with numerous multinational organizations have made a strong case for curbing the use of fossil fuels as an energy source and agreements such as the Kyoto Protocol have come about largely due to their efforts Many groups of researchers in both the natural and social sciences have made great strides in understanding this complicated issue To date however the vast majority of climate change literature has addressed the topic from a European North American or global perspective and the implications for developing countries have largely received only cursory treatment This book represents a major step forward in addressing the issue of climate from the perspective of a country in the developing world It highlights the climate change concerns for a particular developing country Mexico and analyses the economic impacts of different policies designed to mitigate the use of fossil fuels in the context of economic development and growth The effects of energy pricing policies technological change carbon sequestration and tradable permits are all economically modeled and discussed at length by the authors Of particular interest are the issues that these authors raise for policy makers such as the tradeoffs between environmental concerns economic growth and income distribution

**The Future of Arid Lands-Revisited** Charles F. Hutchinson,Stefanie M. Herrmann,2007-12-07 UNESCO commemorated its sixtieth anniversary in 2005 It was a year for reflection a time to look back on the progress made and the achievements accomplished over the last 60 years To celebrate the importance and relevance of science at UNESCO a publication entitled Sixty Years of Science at UNESCO 1945 2005 was launched in 2006 which offers an insight into the organization's commitment towards and endeavors in science from the past through to the present day Within the United Nations System UNESCO has one of the longest traditions in addressing dryland problems from a scientific point of view As it happened arid zones were precisely at the centre of UNESCO's earliest efforts at international scientific collaboration in the study of natural resources The first international research program dealing with these zones was launched back in 1951 under the direction of an International Advisory Committee It was continued until 1964 after being raised to the status of a Major Project of the Organization in 1957 This Major Project was a pioneer program in many respects One of its merits and not the least was that it blazed a trail in its interdisciplinary approach to the study of natural resources and its holistic view of the problems of arid and semiarid zones

**Climate Variability and Extremes during the Past 100 years** Stefan Brönnimann,Jürg Luterbacher,Tracy Ewen,Henry F.

Diaz, Richard S. Stolarski, Urs Neu, 2007-12-20 This volume provides an up to date overview of climate variability during the 20th century in the context of natural and anthropogenic variability It compiles a number of contributions to a workshop held in Gwatt Switzerland in July 2006 dealing with different aspects of climate change variability and extremes during the past 100 years The individual contributions cover a broad range of topics The volume fills a gap in this exciting field of research

A Biomass Future for the North American Great Plains Norman J. Rosenberg, 2007-02-15 The North American Great Plains is a major global breadbasket but its agriculture is stressed by drought heat damaging winds soil erosion and declining ground water resources Biomass production and processing on the Plains would partially restore a perennial vegetative cover and create employment opportunities This book explores the possibility that the ecology and economy of the Plains region and similar regions would benefit from the introduction of perennial biomass crops      **Climate Change 2007: Mitigation of climate change** ,2007      *Global Change and Mountain Regions* Uli M. Huber, Harald K.M. Bugmann, Mel A. Reasoner, 2005-10-07 Environment mountain biodiversity ecological changes
