"My knight in shining armor, you've returned! How did your journey through time go, darling? Did you save the damsel?"

"Damsel, I thought it would work this time!"

"Whatever do you mean? Why am I speaking like this? Oh my, I feel like a princess! Whatever has come over me!"

"Yeah, I didn't think it could get worse. So I doubled down and spoke to your parents again."

"Good Gracious, I remember now! My parents decided to raise me like a little princess and actually enrolled me into those Lady Etiquette Classes and Ballet Lessons. I'm practicing to play Cinderella for my next ballet recital! I can't stop acting like this, I've been practicing to be a princess my whole life!"

"Well at least you're not a maid this time! Hell, you look good! You almost look like you're enjoying yourself!"

"Awwe, thank you! You're lucky a lady never gets mad or I'd be so upset with you, and of course I'm enjoying this! It's been my dream since I was a little girl. That's not the point though, darling!"

"Right, from now on I'll avoid your parents. They were the ones who made you the lady you are today, correct?"

"Of course, ever since I was little I've been daddy's little princess!"

"I get it! Don't worry though, as soon as I figure out what point in time turned you into a girl, then everything should start getting back to normal. I'll be back in no time!"

"My hero!"

"Time Machine flashes and disappears"

"Goodness, did I just call him 'my hero'? I'm such a princess! Oh, I certainly do hope he saves me. Until then I guess it's back to practice."

Future,2007-10-01 Natural and human induced changes in Earth's interior, land surface, biosphere, atmosphere and oceans affect all aspects of life. Understanding these changes requires a range of observations acquired from land, sea, air and space based platforms. To assist NASA, NOAA and USGS in developing these tools, the NRC was asked to carry out a decadal strategy survey of Earth science and applications from space that would develop the key scientific questions on which to focus Earth and environmental observations in the period 2005-2015 and beyond and present a prioritized list of space programs, missions and supporting activities to address these questions. This report presents a vision for the Earth science program, an analysis of the existing Earth Observing System and recommendations to help restore its capabilities, an assessment of and recommendations for new observations and missions for the next decade, an examination of and recommendations for effective application of those observations and an analysis of how best to sustain that observation and applications system.

Superplumes: Beyond Plate Tectonics David A. Yuen, Shigenori Maruyama, Shun-ichiro Karato, Brian F. Windley, 2007-08-26 This abundantly illustrated book provides a concise overview of our understanding of the entire mantle, its evolution since early differentiation and the consequences of superplumes for earth surface processes. The book's balanced authorship has produced a state-of-the-science report on the emerging concept of superplumes. Distal Impact Ejecta Layers Billy P. Glass, Bruce M. Simonson, 2012-12-14 Impact cratering is an important geological process on all solid planetary bodies and in the case of Earth may have had major climatic and biological effects. Most terrestrial impact craters have been erased or modified beyond recognition. However, major impacts throw ejecta over large areas of the Earth's surface. Recognition of these impact ejecta layers can help fill in the gaps in the terrestrial cratering record and at the same time provide direct correlation between major impacts and other geological events such as climatic changes and mass extinctions. This book provides the first summary of known distal impact ejecta layers.
