Hunt, 2013-02-01 The Photographic Regional Atlas of Bone Disease is intended to serve the needs of a diverse audience including paleopathologists physical anthropologists and other anthropologists police crime scene technicians medical examiners radiologists anatomists and other medical specialists regardless of training or experience Although originally written as a manual for physical anthropologists it has become a reference for anyone examining skeletal remains or dealing with bone disease especially in dry bone specimens Over the years it has gained in popularity as one of the few required manuals in most skeletal laboratories throughout the U S and in fact many countries The purpose of the book is to bridge the gap between clinical medicine radiology and physical anthropology by providing researchers with a single source and photographic atlas of what they might encounter in one bone or an entire skeletal collection regardless of antiquity or origin Unlike most texts written by clinicians for clinicians or those that focus on one specialty the Regional Atlas was compiled by biological anthropologists using a dry bones approach and simple yet precise
