The Southern Cone John F. Eisenberg, Kent H. Redford, 1989 Mammals of the Neotropics satisfies the need for a comprehensive up to date survey of existing knowledge of South America's terrestrial and marine mammals. No comparable account of South American mammals has ever been published in any language and this timely work will help encourage the research vital to conservation efforts. This second of a projected three volumes covers southern South America. The authors discuss the historical biogeography and contemporary habitats of the region and then provide individual accounts for nearly 360 indigenous species including information on size, appearance, ecology, behavior, and life history. Range maps, line drawings, and color plates supplement the text. To place the species accounts in a broader context, the authors consider the diversity of animals within each taxonomic group, examine the Neotropical species from a worldwide geographical perspective, and review taxonomic questions and controversies. Two final chapters deal with the community ecology of mammals and the effects humans have had on the mammalian fauna of the southern cone. Vivid illustrations complement the rich information. Each contributor brings an own perspective, knowledge, and writing style, resulting in the latest research results, advances, and current trends in assisted reproductive technologies. The work also includes case studies and hands-on examples to provide readers with real-life applications. The practical approach will enhance the learning experience and differentiates this volume from mainly theoretical literature. Specifically tailored to the professional audience within the field of assisted animal reproduction, this book will update veterinarians, researchers, animal breeders, and advanced students. By presenting innovative techniques and approaches not widely covered in other works, this volume offers new perspectives and ideas for reproductive management. Mammals of South America, Volume 2 James L. Patton, Ulyses F. J. Pardiñas, Guillermo D'Elía, 2015-03-09 The second installment in a planned three volume series, this book provides the first substantive review of South American rodents published in over fifty years. Increases in the reach of field research and the variety of field survey methods, the introduction of bioinformatics, and the explosion of molecular-based genetic methodologies have all contributed to the revision of many phylogenetic relationships and to a doubling of the recognized diversity of South American rodents. The largest and most diverse mammalian order on Earth and an increasingly threatened one, Rodentia, is also of great ecological importance. Rodents is both a timely and exhaustive reference on these ubiquitous creatures. From spiny mice and guinea pigs to the oversized capybara, this book covers all native rodents of South

America the continental islands of Trinidad and Tobago and the Caribbean Netherlands off the Venezuelan coast It includes identification keys and descriptions of all genera and species comments on distribution maps of localities discussions of subspecies and summaries of natural taxonomic and nomenclatural history Rodents also contains a detailed list of cited literature and a separate gazetteer based on confirmed identifications from museum vouchers and the published literature
