Bone Cements and Cementing Technique U. Henze, G.H.I.M. Walenkamp, D.W. Murray, H.-J. Kock, 2012-12-06 G H I M WALENKAMP D W MURRAY Since the first use of bone cement there has been much discussion about this important tool in arthroplasty Many authors consider the cemented prosthesis as the gold standard when evaluating the outcome of primary prostheses In a large number of total hip arthroplasties as registered in the Scandi navian Hip Registers important differences in revision risks have been documented between hospitals These differences are partly due to the use of diverse cement techniques In the analysis of data the influence of these techniques as well as the different cement types is clear A recent disaster with a newly developed cement also illustrated that the quality of the cement must be assured and that the introduction of a new material must be carefully prepared and followed up The new Palamed cement has been developed by the makers of the well known Palacos and Refobacin Palacos which appeared to be the best cements in the Swedish register An improvement was noted in slightly better handling characteristics but the end product is the same as Palacos As mentioned this cement will be carefully followed up in the near future However its introduction is a good reason to gather the expertise of some of the leading figures in the field in this book
