

IT Project+ Certification

Four phases of project management

Initiation and scope definition

Identify stakeholder objectives for the information technology (IT) project, and prepare a scope statement to define the work requirements necessary to meet the project goals. Examine business expectations and technical parameters for budget, schedule, and risk. Establish success and completion criteria. Identify key project roles, and gain stakeholder sign-off.

Planning

Define project parameters in more depth, including the project strategy, life cycle, deliverables, and schedule. Develop a list of resources, and estimate costs to create a budget. Anticipate risk and create a risk management plan. Develop a detailed project plan, including strategies for communication and change management. Before finalizing the plan, confirm stakeholder expectations and obtain management sign-off.

Execution, control, and coordination

Execute the project plan while controlling costs and the schedule. Coordinate resources and tasks. Monitor and track performance, and analyze performance indicators. When you identify a problem, correct it and implement a change management strategy. Pay close attention to the triple constraint: scope, schedule, and budget.

Closure, acceptance, and support

Obtain a review to identify and analyze problems with planning, organization, direction, control, execution, and budget. Transfer project deliverables to support and maintenance personnel, and create a help desk. Institute user training as necessary. Obtain customer sign-off.
