Truffer, 2005-06-29 Technological change is a central feature of modern societies and a powerful source for social change There is an urgent task to direct these new technologies towards sustainability but society lacks perspectives instruments and policies to accomplish this There is no blueprint for a sustainable future and it is necessary to experiment with alternative paths that seem promising Various new transport technologies promise to bring sustainability benefits But as this book shows important lessons are often overlooked because the experiments are not designed to challenge the basic assumptions about established patterns of transport choices Learning how to organise the process of innovation implementation is essential if the maximum impact is to be achieved it is here that strategic niche management offers new perspectives The book uses a series of eight recent experiments with electric vehicles carsharing schemes bicycle pools and fleet management to illustrate the means by which technological change must be closely linked to social change if successful implementation is to take place The basic divide between proponents of technological fixes and those in favour of behavioural change needs to be bridged perhaps indicating a third way *Transportation Engineering and Planning - Volume II*

Alternatives for Improving Urban Transportation Neilon J. Rowan, Donald L. Woods, Vergil G. Stover, 1977 **The Transportation**

Experience William L. Garrison, David M. Levinson, 2014-01-09 The Transportation Experience explores the historical evolution of transportation modes and technologies. The book traces how systems are innovated, planned, and adapted, deployed, and expanded, and reach maturity where they may either be maintained in a polished state, obsolesce, often propped up by subsidies, be displaced by competitors, or be reorganized and renewed. An array of examples supports the idea that modern policies are built from past experiences. William Garrison and David Levinson assert that the planning and control of nonlinear, unstable processes is today's central transportation problem and that this is universal and true of all modes. Modes are similar in that they all have a triad structure of network, vehicles, and operations, but this framework counters conventional wisdom. Most think of each mode as having a unique history and status and each is regarded as the private playground of experts and agencies holding unique knowledge, operating in isolated silos. However, this book argues that while modes have an appearance of uniqueness, the same patterns repeat. Systems, policies, structures, and behaviors are a generic design on varying modal cloth. In the end, the illusion of uniqueness proves to be myopic. While it is true that knowledge has accumulated from past experiences, the heavy hand of these experiences places boundaries on current knowledge, especially on the ways professionals define problems and think about processes. The Transportation Experience provides perspective for the collections of models and techniques that are the essence of transportation science and also expands the boundaries of current knowledge of the field.

Tokhi, Kenneth J. Waldron, Gurvinder S. Virk, 2013-06-26 The proceedings provide state-of-the-art scientific and engineering research findings and developments in the area of mobile robotics and assistive technologies. The proceedings collected together peer-reviewed articles presented at the CLAWAR 2013 conference. It contains a strong showing of articles on legged locomotion with numbers of legs from two onwards. There is also a good collection of articles on systems that walk, climbing poles, balancing, and other more complex structures following the traditional of CLAWAR themes. In addition, the proceedings also cover the subject of robot-human interaction, which focuses on a more human way of communicating with humanoid robots. As for human assistive devices, proceedings also cover exoskeletal and prosthetic devices, robots for personal and nursing cares to address the issues of ageing population in our society. Finally, the issue of the deployment of robots in society, its social and ethical considerations, are also addressed in the proceedings.
