Trace elements in animal production systems P. Schlegel, S. Durosoy, A.W. Jongbloed, 2023-08-28 This book deals with trace elements such as cobalt copper iron manganese selenium and zinc which are essential to modern animal nutrition but are increasingly detrimental to soil and water quality in today's globalized production The goal in finding a sustainable balance between trace element use in animal nutrition and its impact on the environment is addressed by focussing on the following questions What is the trace element flow on farm regional or national scale and which tools are available to influence the flow What are today's and future soil and water quality in regards to trace minerals What are the trace mineral loading limits in soil and water from a health and legal standpoint Which technologies exist to modify slurry trace element contents What is today's knowledge on quantitative and qualitative trace element requirements and recommended supplementation for ruminants swine poultry fish and crustaceans What is trace element bioavailability and how can it be determined To which extent are trace minerals related to immune response What are the future issues to be addressed in trace element nutrition This book contains the peer reviewed papers

of the first International Symposium on Trace Elements in Animal Production Systems It is a valuable resource for researchers and professionals in the life sciences of animal nutrition soil and water quality for actors in the feed industry and policy making

Alternative Feed Ingredients for Sustainable Livestock Production Juana Catarina Cariri Chagas,Gabriel Da Silva Viana,Marcos Inacio Marcondes,2025-08-12 Population growth and rising incomes in developing countries are leading to an increasing demand for animal products As limited possibilities exist to increase the area of arable land food production depends on an increase in crop yield per hectare However more than 70% of global agricultural land is already used to produce feed to support livestock production Moreover the remaining arable land available is used for food and fuel and in the upcoming years due to the consequences of climate change and global warming some of this land will be compromised through droughts and desertification Therefore using ingredients such as non human edible products native crops and by products in animal feed is necessary and unavoidable

Sustainable animal production A. Aland,F. Madec,2023-09-04 An understanding of sustainability in animal production is becoming increasingly necessary since the global demand for food is expected to dramatically increase in the coming decades In this context raising animals for the production of food will become increasingly challenging Farm animals should not adversely compete with humans for their own sustenance and food of animal origin should be safe and affordable The production of healthy animals will therefore be a prerequisite Such animals will efficiently convert their feed into food that can be certified as nutritive and safe In addition there is growing evidence that there should be a focus on animal welfare and environmental pollution related to animal farming must be minimized Indeed the equation to resolve the constraints on animal production is complex and multifactorial It is inarguable that the environment and the feed that is offered to animals are key elements of sustainability in livestock and poultry production This book addresses the major issues related to animal health and welfare maintenance in relation to their environment as well as housing emissions and waste management Experiments reviews and expert opinions and scenarios for the future are presented Each of the chapters has been written by scientists with international reputations The language used and the examples and the illustrations provided make it easy to read The book is of major and current interest to teachers and students in animal and veterinary sciences and to

professionals veterinarians farm managers agricultural advisers worldwide
