Alternative Fuels for Road Vehicles Mark L. Poulton, 1994 The many alternative fuels that have been reviewed in this book are likely to be of great interest to a broad readership not only to mechanical petrochemical and transportation engineers but anyone with a technical association with the subject The book covers fuels for the motor vehicle and how they may develop and change in the future Prospects for conventional petrol and diesel fuels are discussed including their reformulation as well as synthetic fuels vegetable oils and other biofuels alcohols gases LPG natural gas and hydrogen and electricity This book has been published as a consequence of a programme of study commissioned by the Chief Mechanical Engineer's Office at the UK Department of Transport into the contribution of the road vehicle to global warming A programme of research was placed with the Environment Centre of the Transport Research Laboratory and one of the individual projects was to investigate the future prospects for conventional and alternative fuels for road vehicles Implications for the energy and emissions from the whole fuel cycle from production to distribution and final usage were considered but more importantly the vehicular fuel consumption and consequent carbon dioxide emissions and exhaust emission characteristics were the primary focus of attention The structure of this book is such that each chapter describes a particular alternative fuel and is completely self contained The reader will be able to cover a particular subject that is of interest without having to refer to other chapters to gain a full understanding of the fuel's characteristics notable developments and demonstration programmes underway worldwide One chapter chapter 10 does provide an overview and inter comparison of all the fuels discussed including point of use and life cycle emissions global warming impacts fuel storage implications and likely costs Future advances in conventional engines and the development of alternative power units are discussed in the companion volume to this book Alternative Engines for Road Vehicles The future prospects for a range of engines including conventional petrol and diesel fuelled units covering technologies such as two stroke lean burn and stratified charge the rotary engine gas turbine Stirling Rankine steam engine and hybrids are assessed for their potential to reduce vehicle emissions and improve fuel economy Other less well known concepts such as catalytic combustion the Quadratic beam engine stepped piston and other engine efficiency techniques are also reviewed Book Jacket Alternative Liquid Fuels José R.
