**Light Metal Applications for the Automotive Industry** Society of Automotive Engineers, 2001     Aluminum and Magnesium for Automotive Applications Minerals, Metals and Materials Society. Non-ferrous Metals Committee, 1996 The need for light weight structural materials in transportation applications is expanding as the pressure for improvements in emissions and fuel economy increases The incorporation of aluminum and magnesium alloys into automotive structures has steadily increased to meet these needs This proceedings volume documents the extensive progress made in the following three areas     *Trends in Welding Research* Stan A. David, 2009-01-01     *Automotive Alloys 1999* Subodh K. Das, 2013-09-18

A discussion of the most recent developments in aluminum and magnesium alloys application in the automotive market these proceedings cover physical and process metallurgy of aluminum and magnesium castings extrusions composites and sheet alloy processing structure and properties characterization commercial and pilot applications in the automotive market and technology and performance     **Composites for Automotive Applications** C. D. Rudd, 2000 Various factors in the automotive sector have combined to create a favourable climate for the development of materials and fabrication techniques

for polymer based composite body panels and structures The cond104 in which composites are used within the automotive industry has been reviewed in this report and those materials and processes that are used in the fabrication of components and structures are described in detail For this reason this report is essential reading for the composites plastics industries and the land transport automotive sectors An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database gives useful references for further reading     **Industry, Trade, and Technology Review** , 1994
