Computing The Homology Of The Lambda Alg:

Computing the Homology of the Lambda Algebra Martin C. Tangora, 1985 For each prime p there is a lambda algebra which serves among other things as an E_1 term for the stable or unstable Adams spectral sequence This paper describes algorithms and programs for computing the homology of these algebras using a mainframe computer Tables of the results are included for $p = 2$ and $p = 3$

A User's Guide to Spectral Sequences John McCleary, 2001 Spectral sequences are among the most elegant and powerful methods of computation in mathematics This book describes some of the most important examples of spectral sequences and some of their most spectacular applications The first part treats the algebraic foundations for this sort of homological algebra starting from informal calculations The heart of the text is an exposition of the classical examples from homotopy theory with chapters on the Leray Serre spectral sequence the Eilenberg Moore spectral sequence the Adams spectral sequence and in this new edition the Bockstein spectral sequence The last part of the book treats applications throughout mathematics including the theory of knots and links algebraic geometry differential geometry and algebra This is an excellent reference for students and researchers in geometry topology and algebra

Complex Cobordism and Stable Homotopy Groups of Spheres Douglas C. Ravenel, 2003-02-09 Since the publication of its first edition this book has served as one of the few available on the classical Adams spectral sequence and is the best account on the Adams Novikov spectral sequence This new edition has been updated in many places especially the final chapter which has been completely rewritten with an eye toward future research in the field It remains the definitive reference on the stable homotopy groups of spheres The first three chapters introduce the homotopy groups of spheres and take the reader from the classical results in the field though the computational aspects of the classical Adams spectral sequence and its modifications which are the main tools topologists have to investigate the homotopy groups of spheres Nowadays the most efficient tools are the Brown Peterson theory the Adams Novikov spectral sequence and the chromatic spectral sequence a device for analyzing the global structure of the stable homotopy groups of spheres and relating them to the cohomology of the Morava stabilizer groups These topics are described in detail in Chapters 4 to 6 The revamped Chapter 7 is the computational payoff of the book yielding a lot of information about the stable homotopy group of spheres Appendices follow giving self contained accounts of the theory of formal group laws and the homological algebra associated with Hopf algebras and Hopf algebroids The book is intended for anyone wishing to study computational stable homotopy theory It is accessible to graduate students with a knowledge of algebraic topology and recommended to anyone wishing to venture into the frontiers of the subject

Algebraic Topology. Seattle 1985 Haynes R. Miller, Douglas C. Ravenel, 2006-11-15 During the Winter and spring of 1985 a Workshop in Algebraic Topology was held at the University of Washington The course notes by Emmanuel Dror Farjoun and by Frederick R Cohen contained in this volume are carefully written graduate level expositions of certain aspects of equivariant homotopy theory and classical homotopy theory

respectively M E Mahowald has included some of the material from his further papers represent a wide range of contemporary homotopy theory the Kervaire invariant stable splitting theorems computer calculation of unstable homotopy groups and studies of L_n and the symmetric groups *Algebraic Topology: Oaxtepec 1991* Martin C. Tangora, 1993 This book consists of twenty nine articles contributed by participants of the International Conference in Algebraic Topology held in July 1991 in Mexico In addition to papers on current research there are several surveys and expositions on the work of Mark Mahowald whose sixtieth birthday was celebrated during the conference The conference was truly international with over 130 mathematicians from fifteen countries It ended with a spectacular total eclipse of the sun a photograph of which appears as the frontispiece The papers range over much of algebraic topology and cross over into related areas such as K theory representation theory and Lie groups Also included is a chart of the Adams spectral sequence and a bibliography of Mahowald's publications Effective Algebraic Topology Rolf Schön, 1991 Regret none available **Symplectic**

Cobordism and the Computation of Stable Stems Stanley O. Kochman, 1993 This memoir consists of two independent papers In the first The symplectic cobordism ring III the classical Adams spectral sequence is used to study the symplectic cobordism ring capital Greek Omega superscript over subscript italic capital S subscript italic p In the second The symplectic Adams Novikov spectral sequence for spheres we analyze the symplectic Adams Novikov spectral sequence converging to the stable homotopy groups of spheres **The Mathematical Heritage of C F Gauss** George M. Rassias, 1991-09-01 This volume is a collection of original and expository papers in the fields of Mathematics in which Gauss had made many fundamental discoveries The contributors are all outstanding in their fields and the volume will be of great interest to all research mathematicians research workers in the history of science and graduate students in Mathematics and Mathematical Physics Bordism, Stable Homotopy and Adams Spectral Sequences Stanley O. Kochman, 1996 This book is a compilation of lecture notes that were prepared for the graduate course Adams Spectral Sequences and Stable Homotopy Theory given at The Fields Institute during the fall of 1995 The aim of this volume is to prepare students with a knowledge of elementary algebraic topology to study recent developments in stable homotopy theory such as the nilpotence and periodicity theorems Suitable as a text for an intermediate course in algebraic topology this book provides a direct exposition of the basic concepts of bordism characteristic classes Adams spectral sequences Brown Peterson spectra and the computation of stable stems The key ideas are presented in complete detail without becoming encyclopedic The approach to characteristic classes and some of the methods for computing stable stems have not been published previously All results are proved in complete detail Only elementary facts from algebraic topology and homological algebra are assumed Each chapter concludes with a guide for further study **Handbook of Algebraic Topology** I.M. James, 1995-07-18 Algebraic topology also known as homotopy theory is a flourishing branch of modern mathematics It is very much an international subject and this is reflected in the background of the 36 leading experts who have contributed to the Handbook Written for the reader who already has a

grounding in the subject the volume consists of 27 expository surveys covering the most active areas of research They provide the researcher with an up to date overview of this exciting branch of mathematics

Algebraic Topology Mark E. Mahowald, Stewart Priddy, 1989 This book will provide readers with an overview of some of the major developments in current research in algebraic topology Representing some of the leading researchers in the field the book contains the proceedings of the International Conference on Algebraic Topology held at Northwestern University in March 1988 Several of the lectures at the conference were expository and will therefore appeal to topologists in a broad range of areas The primary emphasis of the book is on homotopy theory and its applications The topics covered include elliptic cohomology stable and unstable homotopy theory classifying spaces and equivariant homotopy and cohomology Geometric topics such as knot theory divisors and configurations on surfaces foliations and Siegel spaces are also discussed Researchers wishing to follow current trends in algebraic topology will find this book a valuable resource

Homotopy Theory: Relations with Algebraic Geometry, Group Cohomology, and Algebraic K-Theory Paul Gregory Goerss, Stewart Priddy, 2004 As part of its series of Emphasis Years in Mathematics Northwestern University hosted an International Conference on Algebraic Topology The purpose of the conference was to develop new connections between homotopy theory and other areas of mathematics This proceedings volume grew out of that event Topics discussed include algebraic geometry cohomology of groups algebraic K theory and $\mathbb{A}^1$ homotopy theory Among the contributors to the volume were Alejandro Adem Ralph L Cohen Jean Louis Loday and many others The book is suitable for graduate students and research mathematicians interested in homotopy theory and its relationship to other areas of mathematics

Adams Memorial Symposium on Algebraic Topology: Volume 2 Nigel Ray, 1992-05-07 J Frank Adams had a profound influence on algebraic topology and his work continues to shape its development The International Symposium on Algebraic Topology held in Manchester during July 1990 was dedicated to his memory and virtually all of the world's leading experts took part This two volume work constitutes the proceedings of the symposium the articles contained here range from overviews to reports of work still in progress as well as a survey and complete bibliography of Adams's own work These proceedings form an important compendium of current research in algebraic topology and one that demonstrates the depth of Adams many contributions to the subject This second volume is oriented towards homotopy theory the Steenrod algebra and the Adams spectral sequence In the first volume the theme is mainly unstable homotopy theory homological and categorical

Homotopy Theory: Proceedings of the Durham Symposium 1985 E. Rees, J. D. S. Jones, 1987-10-29 This 1987 volume presents a collection of papers given at the 1985 Durham Symposium on homotopy theory They survey recent developments in the subject including localisation and periodicity computational complexity and the algebraic K theory of spaces

Topological Modular Forms Christopher L. Douglas, John Francis, André G. Henriques, Michael A. Hill, 2014-12-04 The theory of topological modular forms is an intricate blend of classical algebraic modular forms and stable homotopy groups of spheres The construction of this theory

combines an algebro geometric perspective on elliptic curves over finite fields with techniques from algebraic topology particularly stable homotopy theory It has applications to and connections with manifold topology number theory and string theory This book provides a careful accessible introduction to topological modular forms After a brief history and an extended overview of the subject the book proper commences with an exposition of classical aspects of elliptic cohomology including background material on elliptic curves and modular forms a description of the moduli stack of elliptic curves an explanation of the exact functor theorem for constructing cohomology theories and an exploration of sheaves in stable homotopy theory There follows a treatment of more specialized topics including localization of spectra the deformation theory of formal groups and Goerss Hopkins obstruction theory for multiplicative structures on spectra The book then proceeds to more advanced material including discussions of the string orientation the sheaf of spectra on the moduli stack of elliptic curves the homotopy of topological modular forms and an extensive account of the construction of the spectrum of topological modular forms The book concludes with the three original pioneering and enormously influential manuscripts on the subject by Hopkins Miller and Mahowald

Unstable Modules Over the Steenrod Algebra and Sullivan's Fixed Point Set Conjecture Lionel Schwartz, 1994-06-25 A comprehensive account of one of the main directions of algebraic topology this book focuses on the Sullivan conjecture and its generalizations and applications Lionel Schwartz collects here for the first time some of the most innovative work on the theory of modules over the Steenrod algebra including ideas on the Segal conjecture work from the late 1970s by Adams and Wilkerson and topics in algebraic group representation theory This course tested book provides a valuable reference for algebraic topologists and includes foundational material essential for graduate study
