Computing Tomorrow The Future Of Research In Computer Science:

Computing Tomorrow Ian Wand, Robin Milner, 1996-07-13 First published in 1996 this collection of essays by distinguished computer scientists celebrates the achievements of research and speculates about the unsolved problems in computer science that require future investigation Since the subject stretches from technology in the field through engineering design to foundations in mathematics there is a wide variety of concerns and approaches among the authors The book's purpose is to show that long term research in computer science is crucial and that it must not be driven solely by commercial considerations The authors do not shirk the difficult aspects of their topics but try to expose them in the simplest terms possible without diluting them in order that the reader can understand the issues involved Thus the book also represents a broad overview of much of the state of knowledge and future expectations of computer science illustrating that it is much more than a technology and it is a fully fledged and growing intellectual discipline with its own engineering principles and its own scientific concepts and models It will be stimulating reading because it represents the views of prominent authorities who have had a significant impact on the direction of innovation research and development in computer science

The Future of Computing Performance National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Sustaining Growth in Computing Performance, 2011-04-21 The end of dramatic exponential growth in single processor performance marks the end of the dominance of the single microprocessor in computing The era of sequential computing must give way to a new era in which parallelism is at the forefront Although important scientific and engineering challenges lie ahead this is an opportune time for innovation in programming systems and computing architectures We have already begun to see diversity in computer designs to optimize for such considerations as power and throughput The next generation of discoveries is likely to require advances at both the hardware and software levels of computing systems There is no guarantee that we can make parallel computing as common and easy to use as yesterday's sequential single processor computer systems but unless we aggressively pursue efforts suggested by the recommendations in this book it will be game over for growth in computing performance If parallel programming and related software efforts fail to become widespread the development of exciting new applications that drive the computer industry will stall if such innovation stalls many other parts of the economy will follow suit The Future of Computing Performance describes the factors that have led to the future limitations on growth for single processors that are based on complementary metal oxide semiconductor CMOS technology It explores challenges inherent in parallel computing and architecture including ever increasing power consumption and the escalated requirements for heat dissipation The book delineates a research practice and education agenda to help overcome these challenges The Future of Computing Performance will guide researchers manufacturers and information technology professionals in the right direction for sustainable growth in computer performance so that we may all enjoy the next level of benefits to society

Progress in Artificial Intelligence — IBERAMIA 98 Helder Coelho, 2003-07-31 When in October 1996 in Cholula Puebla Mexico I took charge of organizing the scientific program of the next Ibero American Congress on Artificial Intelligence IBERAMIA 98 I bet on a couple of ideas First I adopted the spirit of the Portuguese adventurers to get the Sixth Congress on a truly international

track In order to attain this aim I needed to convince everybody that the Ibero American AI community had improved over the years and attained a very good level in what concerns individuals Second I brought my colleagues beside me so that we were able to collect sufficient excellent papers without destroying the pioneering spirit of those who first inaugurated the Congress Getting together to find out what is in progress in the vast region in which Latin languages Portuguese and Spanish are spoken attracting others to exchange ideas with us and by doing this advancing AI in general is a risky undertaking This book is the result and it sets a new standard to be discussed by all of us IBERAMIA was established in 1988 Barcelona by three Ibero American AI Associations AEPIA from Spain SMIA from Mexico and APPIA from Portugal after a first meeting in Morelia Mexico in 1986 of SMIA and AEPIA Parallel Problem Solving from Nature-PPSN VI Marc Schoenauer, Kalyanmoy Deb, Günther Rudolph, Xin Yao, Evelyne Lutton, Juan Julian Merelo, Hans-Paul Schwefel, 2007-12-07 We are proud to introduce the proceedings of the Sixth International Conference on Parallel Problem Solving from Nature PPSN VI held in Paris France on 18-20 September 2000 PPSN VI was organized in association with the Genetic and Evolutionary Computing Conference GECCO 2000 and the Congress on Evolutionary Computation CEC 2000 reflecting the beneficial interaction between the conference activities in Europe and in the USA in the field of natural computation Starting in 1990 in Dortmund Germany Proceedings LNCS vol 496 Springer 1991 this biannual meeting has been held in Brussels Belgium Proceedings Elsevier 1992 Jerusalem Israel Proceedings LNCS vol 866 Springer 1994 Berlin Germany Proceedings LNCS vol 1141 Springer 1996 and Amsterdam The Netherlands Proceedings LNCS vol 1498 Springer 1998 where it was decided that Paris would be the location of the 2000 conference with Marc Schoenauer as the general chair The scientific content of the PPSN conference focuses on problem solving paradigms gleaned from natural models Characteristic for Natural Computing is the metaphorical use of concepts principles and mechanisms underlying natural systems such as evolutionary processes involving mutation recombination and selection in natural evolution annealing or punctuated equilibrium processes of many particle systems in physics growth processes in nature and economics collective intelligence in biology DNA based computing in molecular chemistry and multicellular behavioral processes in neural and immune networks **Departments of**
