Contemporary Topics in Immunobiology, Vol. 7:T Cells Osiris Stutman, 2012-12-06 And even I can remember A day when historians left blanks in their writings I mean for things they didn't know Ezra Pound Canto XIII The prefaces to the previous volumes of this series have all expressed in various ways the actual motivation behind these collective efforts There was agreement in most instances that we are facing some kind of publication explosion and that the present type of compact and personalized reviews may be of help from both a conceptual and a purely informational standpoint The aims of the series were and still are to focus attention on the rapidly changing fields within the realm of immunology and to present in each chapter the summation of results generated by an investigator or group of Investigators either as an analysis of their own work or as a correlation of such work with the general field in question The present volume does not differ in its construction from its predecessors although it does concentrate on a single target the T lymphocyte and its biology The selection of subjects as well as contributors has been the sole responsibility of this editor however the actual format and length of the individual contributions was left to the discretion and inspiration of the different authors Even the styles ranging from the concise statement to the meticulously detailed review attest to the freedom of format **Physiological Effects of**

Immunity Against Reproductive Hormones R. G. Edwards, M. H. Johnson, 1976-03-25 Volume 4 Immunopathology
Noel Rose, 2013-06-29 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and biomedical scientists in general who are interested in the intricate system of cells and molecular moieties derived from these cells which constitute the RES It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual volumes are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies *Advances in Immunology*, 1979-11-15 *Advances in Immunology* *Mechanisms of Cell-Mediated Cytotoxicity II* Pierre Henkart, 2012-12-06 This book is derived from contributions to the Second International Workshop on Mechanisms in Cell Mediated Cytotoxicity held in Annapolis Maryland June 10-13 1984 This workshop was

organized by an international committee of immunologists interested in lymphocyte cytotoxic mechanisms G Berke W R Clark P Golstein M Hanna P Henkart R Herberman H R MacDonald E Martz and C Nathan who strove to invite participants who have made major contributions to this field The Workshop was a follow up to the highly successful 1981 Workshop whose proceedings Workshop were published by Plenum as Mechanisms in Cell Mediated Cytotoxicity edited by W R Clark and P Golstein That volume has been much appreciated by researchers and students since it contains accounts of most of the current approaches to understanding cytotoxic lymphocyte mechanisms all in one volume The present book may be viewed as a follow up to the first one and in our opinion fairly summarizes the varying current viewpoints on lymphocyte cytotoxic mechanism It should be noted that the discussions have been transcribed directly by us and the participants have not had an opportunity to edit their remarks We have tried to maintain some of the style of the actual discussion in these transcripts In some cases technical problems prevented usable transcriptions from being made and hence not all of the actual discussion at the workshop is reproduced here

Parasites: Immunity And Pathology J M Behnke,1990-08-09 The topics of parasitism parasite induced pathology and relevant host response are interrelated yet their interdependence is rarely appreciated This collection of studies illustrated by landmark experiments emphasize this fundamental aspect of CD4+CD25+ Regulatory T Cells: Origin, Function and Therapeutic Potential B. Kyewski, Elisabeth Suri-Payer,2005-05-23 The vertebrate immune system defends the organism against invading pathogens while at the same time being self tolerant to the body's own constituents thus preserving its integrity Multiple mechanisms act in concert to ensure self tolerance Additional tolerance mechanisms collectively referred to as dominant tolerance is by now firmly established It will offer new conceptual insights and hopefully new tools for the successful treatment of autoimmune diseases improved cancer immunotherapy and transplant survival

Immune Consequences of Trauma, Shock, and Sepsis Eugen Faist, John L. Ninnemann, Douglas R. Green,2012-12-06 Sepsis and infection are the major enemies of the intensive care patient in whom immunological defenses are severely impaired This major problem is the focus of attention in this book based on the presentation of the First International Congress on the Immune Consequences of Trauma Shock and Sepsis which is one of the first attempts to exchange ideas on the state of the art in this area of immunology Both basic and clinical research including new centres of attention are described The growing role of immunology in medicine opens new avenues to the understanding of trauma and sepsis and will allow the design of novel therapeutic approaches

Current Trends in Histocompatibility Ralph Reisfeld,2013-11-11 Information about histocompatibility antigens is expanding so rapidly that it is difficult to remain abreast of aB advances In these volumes we have made an effort to bring together the most current work on topics that have generated most of the recent advances and discussions We have asked each author to present and interpret his most current work and we have judiciously refrained from imposing our own prejudices and viewpoints Although there is obvious overlap in some individual topics we have encouraged this to provide the reader with as many different and some times opposing

viewpoints as possible This approach will we liope give a broad overview of current ideas in the field We wish to thank all contributors for their timely and exciting manu scripts and we sincerely hope that the reader will benefit from these volumes

Immunology and Aging Takashi Makinodan,2012-12-06 In the classic sense immunity is the ability of an organism to resist disease On the one hand we must distinguish between age and disease on the other hand the interaction between them is of considerable theoretical and practical interest To the gerontologic research community therefore immunity also becomes the ability of an organism to resist age Were the immune and other protective systems of the body able to maintain themselves over the course of time and if there were no degradation related to age the everyday loss of energy and vitality that occurs in the lives of older people as a consequence of viruses arthritis and other debilitating circumstances would be greatly lessened The objective of gerontologists is not just to extend the life span but rather to improve the vigor health and quality of life To date we have not developed a single index to measure immunity that is of use clinically in the evaluation of older people and of their immunologic competence It may not be surprising that just such a clinical index may be available in the not too distant future We can also look forward to the assembling of a greater body of information explaining how and why the immune system fails with age while paradoxically the incidence of autoimmune diseases increases with age It is this latter phenomenon that may play a part in a wide range of chronic diseases from rheumatoid arthritis to senile dementia

Function and Specificity of γ/δ T Cells Klaus Pfeffer,Klaus Heeg,Hermann Wagner,Gert Riethmüller,2012-12-06 Our current understanding of a T cell receptor TCR expressing T cells advanced from function and specificity to the molecular organization of the TCR We now know that the TCR α and β chains together express specificity for antigenic peptides presented by the responder MHC allele thus explaining the phenomenon of MHC restriction at a molecular level Surprisingly even though our perception of the molecular organization of the γ/δ TCR is well advanced current knowledge of function and specificity of the γ/δ T cell subset is poor Therefore it appeared rather timely to bring together scientists pioneering research

on $\gamma\delta$ T cells for the International Workshop on Function and Specificity of $\gamma\delta$ T cells held October 11-14, 1990 at Schloss Elmau, Bavaria, FRG. Besides offering a scientific forum for open discussions, it was also hoped that such a workshop would be seminal for collaborative interactions and personal relationships among scientists addicted to $\gamma\delta$ T cells.
