Concept Of Function In Twentieth Century Architectural Criticism:

The Concept of Function in Twentieth-century Architectural Criticism Larry LeRoy Ligo, 1984 Modernism in Design Paul Greenhalgh, 1997-07-01 Ten new and important essays on design cover Modernism's fortunes in Germany Italy Sweden Britain Spain Belgium and the USA they range in subject matter from world fairs and everyday domestic objects to American West coast architecture and French and Italian furniture With essays by Tim Benton Gillian Naylor Penny Sparke Wendy Kaplan Clive Wainwright Martin Gaughan Guy Julier Mimi Wilms Julian Holder and Paul Greenhalgh The object of this book is to diffuse myths If modernism has in the past been both absurdly praised and absurdly damned Modernism in Design seeks to lift it out of this cycle and to demonstrate that the modern movement could offer neither Jerusalem nor Babylon In this the book succeeds admirably Designer's Journal While this collection of essays is aimed primarily at design historians and students of design history hard pressed practising designers and architects should make room for it on their bookshelves Design *Encyclopedia of Twentieth Century Architecture* R. Stephen Sennott, 2004 A balance of sophistication and clarity in the writing authoritative entries and strong cross referencing that links architects and structures to entries on the history and theory of the profession make this an especially useful source on a century of the world's most notable architecture The contents feature major architects firms and professional issues buildings styles and sites the architecture of cities and countries critics and historians construction materials and planning topics schools movements and stylistic and theoretical terms Entries include well selected bibliographies and illustrations Reference that rocks American Libraries May 2005

Functionalism Revisited Jon Lang, Walter Moleski, 2016-12-05 A range of current approaches to architecture are neglected in our contemporary writings on design philosophies This book argues that the model of function and the concept of a functional building that we have inherited from the twentieth century Modernists is limited in scope and detracts from a full understanding of the purposes served by the built environment It simply does not cover the range of functions that buildings can afford nor is it tied in a conceptually clear manner to our contemporary concepts of architectural theory Based on Abraham Maslow's theory of human motivations and following on from Lang's widely used text *Creating Architectural Theory The Role of the Behavioral Sciences in Environmental Design* Lang and Moleski here propose a new model of functionalism that responds to numerous observations on the inadequacy of current ways of thinking about functionalism in architecture and urban design Copiously illustrated the book puts forward this model and then goes on to discuss in detail each function of buildings and urban environments *Architectural Theory of Modernism* Ute Poerschke, 2016-04-20 Architectural Theory of Modernism presents an overview of the discourse on function form concepts from the beginnings in the eighteenth century to its peak in High Modernism Functionalist thinking and its postmodern criticism during the second half of the twentieth century is explored as well as today's functionalism in the context of systems theory sustainability digital design and the information society The book covers among others the theories of Carlo Lodoli Gottfried Semper Eugène

Emmanuel Viollet le Duc Louis Sullivan Frank Lloyd Wright Hannes Meyer Adolf Behne CIAM Jane Jacobs Robert Venturi and Denise Scott Brown Charles Jencks William Mitchell and Manuel Castells *Stuff Theory* Maurizia Boscagli, 2014-03-27 A groundbreaking theory of materialism which reconsiders the role of stuff the small objects that clutter our lives as they crowd the pages of modern literature The Concept of Function in Twentieth-century Architectural Criticism Larry LeRoy Ligo, 1984 **Introducing Architectural Theory** Korydon Smith, Miguel Guitart, 2013-05-20 This is the most accessible architectural theory book that exists Korydon Smith presents each common architectural subject such as tectonics use and site as though it were a conversation across history between theorists by providing you with the original text a reflective text and a philosophical text He also introduces each chapter by highlighting key ideas and asking you a set of reflective questions so that you can hone your own theory which is essential to both your success in the studio and your adaptability in the profession These primary source texts which are central to your understanding of the discipline were written by such architects as Le Corbusier Robert Venturi and Adrian Forty The appendices also have guides to aid your reading comprehension to help you write descriptively analytically and disputationally and to show you citation styles and how to do library based research More than any other architectural theory book about the great thinkers *Introducing Architectural Theory* teaches you to think as well **Philosophy and Architecture**, 2021-11-01 *The Ethical Architect* Tom Spector, 2012-04-17 Many believe that the moral mission of architecture has been in serious decline for the last 25 years In this important new book Tom Spector points out the dilemmas of architectural practice and offers a theoretical and practical basis for an examination and transformation of the quandaries the profession now faces What makes a good building or a good architect Are there limits to an architect's ethical or legal responsibilities in a building process where architecture plays an increasingly smaller role Is preservation a moral imperative What happens when building codes and ethical responsibilities are in conflict In *The Ethical Architect* Spector investigates the moral underpinnings and implications of leading architectural theories subjecting them to the analytical techniques of moral philosophy His conclusions provide a road map to help architects make the right decision in the difficult tradeoffs that confront designers on a daily basis Spector estimates that more than 100 000 decisions go into the design of an average sized building *The Ethical Architect* is a work of theory but refers to real buildings and real world problems It is Spector's call to arms for his profession and a must read for practicing architects and students alike The Experience of Modernism John R. Gold, 2013-12-16 Making extensive use of information gained from in depth interviews with architects active in the period between 1928 1953 the author provides a sympathetic understanding of the Modern Movement's architectural role in reshaping the fabric and structure of British metropolitan cities in the post war period and traces the links between the experience of British modernists and the wider international modern movement Actions of Architecture Jonathan Hill, 2003-09-02 Drawing on the work of a wide range of architects artists and writers this book considers the relations between the architect and the user which it compares to the

relations between the artist and viewer and the author and reader The book's thesis is informed by the text *The Death of the Author* in which Roland Barthes argues for a writer aware of the creativity of the reader *Actions of Architecture* begins with a critique of strategies that define the user as passive and predictable such as contemplation and functionalism Subsequently it considers how an awareness of user creativity informs architecture architects and concepts of authorship in architectural design Identifying strategies that recognize user creativity such as appropriation collaboration disjunction DIY montage polyvalence and uselessness *Actions of Architecture* states that the creative user should be the central concern of architectural design

Domestic Architecture and the Use of Space Susan Kent,1993-06-25 *Domestic Architecture and the Use of Space* investigates the relationship between the built environment and the organisation of space The contributors are classical and prehistoric archaeologists anthropologists and architects who from their different backgrounds are able to provide some important and original insights into this relationship

Ideas That Shaped Buildings M. Fil Hearn,2003-10-10 Identifying the operative ideas in architectural theory from ancient Rome to the present and codifying them into coherent theoretical systems for students practitioners and the general reader In *Ideas That Shaped Buildings* Fil Hearn identifies and codifies into theoretical systems the operative tenets of architectural theory from ancient Rome to the present With this strikingly original synthesis of architectural history and theory he constructs an intellectual armature on which virtually any architectural concept past or present can be positioned Dealing mainly with the treatises that have been highly influential historically he organizes their concepts thematically and analyzes their development through time Straightforward and concise *Ideas That Shaped Buildings* is readily accessible to architecture students practicing architects and the general public indeed anyone interested in understanding the design rationale of buildings Its overarching message is that far from being constricting proper knowledge and application of architectural theory is enabling and inspiring and makes creative freedom possible by providing the conceptual awareness needed to devise a design After an introductory history of the development of architectural theory the text is divided into four parts The first deals with issues relevant to all theories of architecture The second treating theory from antiquity to 1800 focuses on the prescriptive conventions inherent in the classical tradition The third treating theory after 1800 focuses on the inspirational principles prompted by rationalist perceptions of the Gothic tradition The fourth treating theory since 1965 deals with rationales beyond rationalism and the influence of computers on design method and design formulation The concepts discussed are illustrated with theoretical drawings and images of actual buildings

Forms and Functions of Twentieth-century Architecture: The principles of composition Talbot Hamlin,1952 *Modern City Revisited* Thomas Deckker,2005-08-12 The second in a series of titles published to address issues relating to the conservation of the Modern Movement this is a key publication for architects planners and all those with a specific interest in modernism and modern planning

The Aesthetics Of Human Environments Arnold Berleant,Allen Carlson,2007-05-24 *The Aesthetics of Human Environments* is a companion volume to

Carlson's and Berleant's *The Aesthetics of Natural Environments* Whereas the earlier collection focused on the aesthetic appreciation of nature *The Aesthetics of Human Environments* investigates philosophical and aesthetics issues that arise from our engagement with human environments ranging from rural landscapes to urban cityscapes Our experience of public spaces such as shopping centers theme parks and gardens as well as the impact of our personal living spaces on the routine activities of our everyday life are discussed in terms of their aesthetic value and the nature of our aesthetic appreciation This volume will appeal to any reader concerned about the aesthetic quality of the world in which we live Architecture and Civilization ,2022-05-20 *Aesthetics and the Environment* Allen Carlson,2005-08-08 Traditional aesthetics is often

associated with the appreciation of art Allen Carlson shows how much of our aesthetic experience does not encompass art but nature in our response to sunsets mountains or horizons or more mundane surroundings like gardens or the view from our window He argues that knowledge of what it is we are appreciating is essential to having an appropriate aesthetic experience and that scientific understanding of nature can enhance our appreciation of it rather than denigrate it

Thinking Through Twentieth-Century Architecture Nicholas Ray,2023-02-08 Shortlisted for the Architectural Book Awards 2024 *Thinking Through Twentieth Century Architecture* connects the practice of architecture with its recent history and its theoretical origins those philosophical ideas that lay behind modernism and its aftermath By analyzing in straightforward and jargon free language the genesis of modernism and the complex reactions to it the book clarifies a continuing debate It has been specifically written to connect issues of theory history and contemporary practice and to allow students to make these connections easily This is a history of twentieth century architecture written with close critical attention to the theories that lie behind the works described Importantly unlike other historical accounts it does not take sides and urge the reader to identify with one strand of thinking or style of architecture at the expense of others but it presents a dispassionate view with persuasive arguments on behalf of different positions It pursues the history of European and American architecture chronologically but the history is interwoven with the philosophical ideas that informed both writers and architects and are essential for its understanding The book is relevant to current issues of contemporary practice and education showing that philosophical issues are fundamental and those relating to design decisions never go away It includes 200 illustrations and will appeal to all those interested in twentieth century architecture and to architectural students
