He has provided the academic world with a long needed bibliographical record of human endeavour in the field of the natural sciences. The travel narratives listed here encompass all aspects of the natural world in every part of the globe but are especially concerned with its fauna, flora and fossil remains. Such eyewitness accounts have always fascinated their readers but they were never written solely for entertainment. fragmentary though they often are, these narratives of travel and exploration are of immense importance for our scientific understanding of life on earth, providing us with a window on an ever changing and often vanishing natural world. Without such records of the past we could not track, document or understand the significance of changes that are so important for the study of zoogeography. With this book Troelstra gives us a superb overview of natural history travel narratives. The well over four thousand detailed entries, ranging over four centuries and all major western European languages, are drawn from a wide range of sources and include both printed books and periodical contributions. While no subject bibliography by a single author can attain absolute completeness, Troelstra's work is comprehensive to a truly remarkable degree. The entries are arranged alphabetically by author and chronologically by the year of first publication under the author's name. A brief biography with the scope and range of their work is given for each author; every title is set in context, the contents including illustrations are described, and all known editions and translations are cited. In addition, there is a geographical index that cross-refers between authors and the regions visited, and a full list of the bibliographical and biographical sources used in compiling the bibliography.

*Daybooks of Discovery* Mary Ellen Bellanca, 2007 Rooted in a thriving culture of amateur natural history, the keeping of nature journals and diaries flourished in late eighteenth and early nineteenth century Britain. As prescientific worldviews ceded to a more materialist outlook informed by an explosion of factual knowledge, lovers of nature, both famous and obscure, began to use daily composition as a quest for information about and a celebration of their surroundings. A central site of encounter, discovery and expression, nature diaries took part in a vigorous cultural dialogue, performing in an era called the golden age of nature writing an engaging alchemy of language, science and art. In *Daybooks of Discovery: Nature Diaries in Britain 1770-1870*, Mary Ellen Bellanca offers the first critical study of this genre. In looking at the diaries of Gilbert White, Dorothy Wordsworth, Emily Shore, George Eliot and Gerard Manley Hopkins, as well as those of lesser known figures, she explores the writers' pursuit of empirical knowledge of nature for its own sake, rather than focusing on Romantic nature philosophy or on ecology as a metaphor for spiritual connectedness. Each chapter situates an individual author's journals amid contemporary discourses of natural history, examining how journal writing enabled and mediated the diarist's practice as naturalist. A mélange of fact, narrative and imaginative re-creation, the nature diary played a crucial role in literature and science in a period of burgeoning knowledge about the natural world. For students and scholars of environmental history, the history of science, ecocriticism and Victorian studies, *Daybooks of Discovery* will prove an essential
