Finnegan, 1981-01-01 *Conceptions of Inquiry* Stuart Brown, John Fauvel, Ruth Finnegan, 2005-08-17 A number of significant contributions have been made both to specific intellectual disciplines and on the broader philosophical front by researches into the nature of inquiry The papers in this collection illustrate a number of such areas of debate in mathematics natural science social studies and history allowing an appraisal of their importance in their own context as well as comparisons across disciplinary frontiers Some extracts are undoubtedly classic Plato on mathematics Newton on physics and J S Mill on social science However most contributions are more contemporary work by theorists such as Foucault and Hofstadter and by practitioners such as Bondi and Einstein Mathematics is considered under a number of headings from Plato's eternal truth to Hodgkin's social practice Its relation to the real world is discussed in a number of essays In the section on natural science various strands of the Popper Kuhn debate can be followed including the questions of progress rationality and the demarcation of science as opposed to pseudoscience A similar set of problems is presented in the sections on social inquiry Here the scientific status of sociology anthropology history and the like is at issue Some writers argue that social inquiry is quite distinct from science whilst others including Hempel deny that there is any essential difference between the human and the natural sciences The final sections are devoted to more general problems Extracts from Hume Hirst and Foucault discuss the isolation and definition of forms of knowledge the prevailing views of the objectivity of science are challenged by Hanson and Kuhn and the role of values in social inquiry is debated by Weber Gouldner and Hesse
