Conceptions Of Space In Social Thought:

Conceptions of Space in Social Thought Robert David Sack, 1980 **Geography Matters!** Doreen Massey, John Allen, 1984-11-22 Space and nature have long been the concerns of human geography bound up with a strong sense of the importance of place Understanding how society changes entails understanding the geography of social change In this new reader the editors argue for a new way of looking at the relationship between society and its spatial organization between society and nature and between the interdependence and unique character of places First through a selection of material ranging from the changing geography of class cultures gender relations city structures state power to the processes of international law the readings demonstrate that neither space nor society can be understood independently of the other Social change involves spatial change and spatial change affects social organization The two sides of the relation mediate a geography of change Second a number of the articles explore the relation between society and nature and demonstrate that that too involves a continuous and changing interrelationship Nature cannot be understood outside of its social interpretation and use equally nature the environment has an impact upon the quality and future of our lives Third this collection presents an approach to the geography of place which has methodological implications for all those in social science who are concerned with the central problem of appreciating the of outcomes without losing sight of general processes of chance To grasp the dynamic relation between society space and nature is important not only for human geography but for all the social sciences Geography Matters brings together a wide range of articles from both geographers and non geographers It addresses a series of economic political and cultural issues from a geographical angle that will put the social distinctiveness of place back on the agenda for all the social sciences **'Conceptions of Space in Social Thought'** Andrew Sayer, 1981

Spatial Dimensions of Social Thought Thomas W. Schubert, Anne Maass, 2011-10-28 Space provides the stage for our social lives social thought evolved and developed in a constant interaction with space The volume demonstrates how this has led to an astonishing intertwining of spatial and social thought For the first time research on language comprehension metaphors priming spatial perception face perception art history and other fields is brought together to provide an integrative view This overview confirms that often metaphors reveal a deeper truth about how our mind uses spatial information to represent social concepts Yet the evidence also goes beyond this insight showing for instance how flexible our mind operates with spatial metaphors how the peculiarities of our bodies determine the way we assign meaning to space and how the asymmetry of our brain influences spatial and face perception Finally it is revealed that also how we write language from left to right or from right to left shapes how we perceive interpret and produce horizontal movement and order The evidence ranges from linguistics to social and spatial perception to neuropsychology seamlessly integrating such diverse findings as speed in word comprehension children s depictions of abstract concepts estimates of the steepness of hills and archival research on how often Homer Simpson is depicted left or right of Marge The chapters in this book offer a topology of social cognition and explore the pivotal role language plays in creating links between spatial and social thought

A Study of the Geography of 1 Enoch 17-19 Kelley Coblenz Bautch, 2003-01-01 Clarifying the text and geography of one of the oldest apocalypses this study examines the travels of the patriarch Enoch Coblenz Bautch also explores comparable and perhaps influential traditions from the ancient Near East Hebrew Bible and world of Hellenism

The Spatial Dimension of Risk Hans-Detlef M?ller-Mahn, 2013 Through its exploration of the spatial dimension of risk this book offers a brand new approach to theorizing risk and significant improvements in how to manage tolerate and take risks A broad range of risks are examined including natural hazards climate change political violence and state failure Case studies range from the Congo to Central Asia from tsunami in Japan and civil war affected areas in Sri Lanka to avalanche hazards in Austria In each of these cases the authors examine the importance and role of space in the causes and differentiation of risk in how we can conceptualize risk from a spatial perspective and in the relevance of space and locality for risk governance This new approach endorsed by

Ragnar L fstedt and Ortwin Renn two of the world s leading and most prolific risk analysts is essential reading for those charged with studying anticipating and managing risks **Multidimensional Geographic Information Science** Jonathan Raper,2000-11-23 The way people normally view a GIS is 2 dimensional a greatly limiting form However as developments occur within the field researchers and practitioners are finding ways to make a GIS 3 dimensional and in some instances even 4 dimensional Being able to view a GIS in more than 2 dimensions greatly enhances its usability This forward lookin

Real and Imaginary Spaces in Tom Stoppard's Plays Nevin Gürbüz-Blaich,2025-06-02 This study benefits from the terminology of geocriticism a literary criticism that suggests an interdisciplinary approach to the exploration of literature in relation to space and place and refers to the spatial theories of Lefebvre Foucault Bakhtin Aug and Certeau as well as to Issacharoff s study of dramatic space Proposing a multidisciplinary perspective the book analyzes the mimetic and diegetic spaces in four of Tom Stoppard s plays *Rosencrantz and Guildenstern Are Dead* 1966 *Travesties* 1974 *Arcadia* 1993 and *Indian Ink* 1995 Stoppard s plays from the 1960s to the 2000s portray different spaces including urban spaces cities landscapes rooms and fictional sites thus serving as exceptional textual sources in spatial literary studies **Putting Science in Its Place** David N. Livingstone,2010-04-15 We are accustomed to thinking of science and its findings as universal After all one atom of carbon plus two of oxygen yields carbon dioxide in Amazonia as well as in Alaska a scientist in Bombay can use the same materials and techniques to challenge the work of a scientist in New York and of course the laws of gravity apply worldwide Why then should the spaces where science is done matter at all David N Livingstone here puts that question to the test with his fascinating study of how science bears the marks of its place of production Putting Science in Its Place establishes the fundamental importance of geography in both the generation and the consumption of scientific knowledge using historical examples of the many places where science has been practiced Livingstone first turns his attention to some of the specific sites where science has been made the laboratory museum and botanical garden to name some of the more conventional locales but also places like the coffeehouse and cathedral ship s deck and asylum even the human body itself In each case he reveals just how the space of inquiry has conditioned the investigations carried out there He then describes how on a regional scale provincial cultures have shaped scientific endeavor and how in turn scientific practices have been instrumental in forming local identities Widening his inquiry Livingstone points gently to the fundamental instability of scientific meaning based on case studies of how scientific theories have been received in different locales Putting Science in Its Place powerfully concludes by examining the remarkable mobility of science and the seemingly effortless way it moves around the globe From the reception of Darwin in the land of the Maori to the giraffe that walked from Marseilles to Paris Livingstone shows that place does matter even in the world of science McLuhan in Space Richard Cavell,2002-01-01 Demonstrates how McLuhan extended insights derived from advances in physics and artistic experimentation into a theory of acoustic space which he then used to challenge the assumptions of visual space that had

been produced through print culture *New Directions in Sociology* Ieva Zake, Michael DeCesare, 2011-07-25 Written by the new generation of sociologists these essays chart a course for the future of the discipline both by revisiting forgotten theories and methods and by suggesting innovative theoretical and methodological approaches Comprised of seven essays on theory and five on methodology the volume also attempts to reconnect theorists and methodologists in a discussion about the future of the sociological enterprise Space and Time in Mediterranean Prehistory Stella Souvatzi, Athena Hadji, 2013-10-15

Space and Time in Mediterranean Prehistory addresses these two concepts as interrelated rather than as separate categories and as a means for understanding past social relations at different scales The need for this volume was realised through four main observations the ever growing interest in space and spatiality across the social sciences the comparative theoretical and methodological neglect of time and temporality the lack in the existing literature of an explicit and balanced focus on both space and time and the large amount of new information coming from prehistoric Mediterranean It focuses on the active and interactive role of space and time in the production of any social environment drawing equally on contemporary theory and on case studies from Mediterranean prehistory Space and Time in Mediterranean Prehistory seeks to break down the space time continuum often assumed rather than inferred into space time units and to uncover the varying and variable interrelations of space and time in prehistoric societies across the Mediterranean The volume is a response to the dissatisfaction with traditional views of space and time in prehistory and revisits these concepts to develop a timely integrative conceptual and analytical framework for the study of space and time in archaeology **Gender, Space and Time** Dorothy Moss, 2006-01-01 Drawing on the work of Henri Lefebvre and Barbara Adam Gender Space and Time is a brilliant study that offers a unique and original threefold conceptualization of how space and time is developed and applied in an empirical study of women's lives Author Dorothy Moss focuses on the everyday practice and experience of women higher education students at a community college in northern England Women's action is considered in relation to the complex and interconnected spheres of paid work home leisure community and higher education Through highlighting concepts of space and time the complex relationship between networks of power and personal action gains visibility Moss conceptualizes women as centers of action and demonstrates the ways in which they construct personal pathways connect different spheres of experience integrate new time demands into the multiple rhythms of their everyday lives and carve out personal space Gender Space and Time is a timely and compelling work certain to be of interest to scholars of sociology women's studies and anthropology **Perspectives in Sociology** E.C. Cuff, A.J. Dennis, D.W. Francis, W.W. Sharrock, 2006-09-27 From its first edition in 1979 Perspectives in Sociology has provided generations of undergraduates with a clear reassuring introduction to the complications of sociological theory This revised and updated edition features a concise introduction to the major debates of the twentieth century placing them in historical and philosophical context information on thinkers of the nineteenth and early twentieth century whose relevance to modern social thought is only now being recognized e.g. Nietzsche Saussure

Simmel connections drawn between post structuralist thinkers like Foucault and Derrida and the founding figures of sociology Marx Weber and Durkheim a completely rewritten chapter on the Synthesisers Bourdieu Habermas and Giddens and their attempts to generate a consensus from the apparently conflicting theories of their predecessors a new chapter reviewing the rise of British sociology with particular reference to the political context and the changing role of class in sociological thinking a new chapter describing the attempts of sociological theorists to explain current concerns problems and issues in the areas of gender homo sexuality and ethnicity in the context of the postcolonial world While retaining its emphasis and wealth of information on the founding figures of sociology this fifth edition now features a new easy to read format with particular attention paid to the linking and cross referencing of chapters and includes much new material on contemporary social theory with particular reference to its attempts to tackle current problems and issues in the areas of gender sexuality and ethnicity in the postcolonial context
