Concepts And Practice Of Architectural Daylighting:

Concepts and Practice of Architectural Daylighting Fuller Moore, 1991 **Daylighting in Architecture** Nick V. Baker, A. Fanchiotti, K. Steemers, 2015-12-08 Typically one third of the energy used in many buildings may be consumed by electric lighting Good daylighting design can reduce electricity consumption for lighting and improve standards of visual comfort health and amenity for the occupants As the only comprehensive text on the subject written in the last decade the book will be welcomed by all architects and building services engineers interested in good daylighting design The book is based on the work of 25 experts from all parts of Europe who have collected evaluated and developed the material under the auspices of the European Commission s Solar Energy and Energy Conservation R D Programmes [The Green Studio Handbook](#) Alison G. Kwok, Walter T. Grondzik, Tom Hahn, 2025-07-03 Making the complexities of green architecture accessible to the design studio The Green Studio Handbook remains a must read for current and future architects The heart of this book provides 43 comprehensive design strategies covering the building envelope lighting heating cooling energy and electricity and water and waste each with a description key architectural issues implementation considerations and a step by step design procedure for integration early in the design process Each design strategy has been thoroughly reviewed and updated to reflect the latest evidence based guidance best practices and standards in consideration of all climatic zones In addition to more than 80 building examples provided throughout ten in depth case studies illustrate successful integration of numerous strategies All case studies are brand new to this fourth edition and include a wide range of building types from the USA Colombia Rwanda Malaysia Denmark Bhutan Canada and Australia Envelope design strategies have been significantly revised and expanded to include new strategies on Foundation systems for the reduction of embodied carbon Framing systems using mass timber bamboo and other natural material based systems Low complexity wall systems using natural elements such as earth lime straw and hemp High complexity wall systems for enhanced thermal performance and strength Additional roofing systems beyond green roofs **Daylighting** Derek Phillips, 2012-05-23 Daylighting offers a general theory and introduction to the use of natural light in architecture The fourth of Derek Phillip s lighting books draws on his experience to illustrate how best to bring natural light into building design As sustainability becomes a core principal for designers daylighting comes to the fore as an alternative to artificial energy consuming light Here Phillips makes a rational argument for considering daylight first outlining the arguments in favour of a daylight approach and goes on to show through a series of beautifully illustrated case studies how architects have created buildings in which natural light has been shown to play a major strategic role in the development of the design of a building **Environmental Design of Urban Buildings** Mat Santamouris, 2013-06-17 This book provides a review of environmental and energy research with respect to urban building projects It describes how to overcome related challenges in environmental design of urban buildings The book discusses the passive and active environmental systems within building concepts **Daylight Design of Buildings** Nick

Baker, Koen Steemers, 2014-01-02 To complement the critical and objective view gleaned from the study of some sixty buildings this design manual has been developed to provide a more synthetic approach to the principles which lie behind successful daylight design. These principles are illustrated with examples drawn from the case study buildings. The emphasis throughout has been on practical methods to improve design rather than techniques studied for any intrinsic interest. The book provides the necessary tools to assist the designer to provide well daylit interiors and shows that good daylight design is not a restriction on architectural expression but on the contrary acts as an inspiration and foundation for good architecture.

Daylighting Performance and Design Gregg D. Ander, 2003-05-30 Daylighting is the process of incorporating natural lighting into the design of buildings. The new edition of this concise resource makes theory calculations and execution crystal clear with straight to the solution examples and uncluttered language. In a practical applied approach this book covers daylighting strategies materials and methods of construction including significant advances in lighting and daylighting technology.

Heating, Cooling, Lighting Norbert Lechner, 2014-10-13 Sustainable environmental control through building design. Heating, Cooling and Lighting is the industry standard text on environmental control systems with the emphasis on sustainable design. By detailing the many factors that contribute to the comfort in a building this book helps architects minimize mechanical systems and energy usage over the life of the building by siting building design and landscaping to maximize natural heating, cooling and lighting. This new fourth edition includes new information on integrated design strategies and designing for the Tropics. Resources include helpful case studies, checklists, diagrams and a companion website featuring additional cases, an image bank and instructor materials. Designing buildings that require less energy to heat, cool and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems. Basic design decisions regarding size, orientation and form have a great impact on the sustainability, cost and comfort of a building. Heating, Cooling and Lighting provides detailed guidance for each phase of a design project. Readers will understand the concept of sustainability as applied to energy sources. Review the basic principles of thermal comfort and the critical role of climate. Learn the fundamentals of solar responsive design including active and passive solar systems as well as photovoltaics. Discover how siting, architectural design and landscaping can reduce the requirements for mechanical and electrical systems. In sustainable design mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself. With this in mind designers require a comprehensive understanding of both the properties of energy and the human factors involved in thermal comfort. Heating, Cooling and Lighting is the complete industry leading resource for designers interested in sustainable environmental control.

The Design of Lighting Peter Tregenza, David Loe, 2003-09-02 Written primarily for the practising designer. Light for Art's Sake Christopher Cuttle,2007-06-01 Conservation scientists in museums and galleries have a clear understanding of the damage that light can inflict on an object but what of the designers that create exhibitions to display these precious items Light for Arts Sake provides a basis for a level of professional expertise for lighting practice in museums Rather than portraying conservation and display as having diametrically opposed objectives the central concept is that the interaction of light and art media is the source for both the visual experience and the degradation of the artwork Optimal solutions derive from understanding and controlling the interaction process and the need is for the level of understanding among lighting professionals to be brought closer to that found among conservation scientists

Daylight, Design and Place-Making Hisham Elkadi,Sura Al-Maiyah,2020-12-20 Daylight Design and Place Making examines the role of daylight in creating and revealing the wonders of heritage and contemporary architecture Shifting from a purely technical approach to daylighting this book places importance on the creation of meaningful aesthetics through an understanding of context and culture Cultural applications of light in architecture differ depending on various historical technological and social characteristics Increasingly there is a revival of interest in contemporary architecture using daylight as an essential contextual ingredient in the design process By examining the architecture of daylight in different locales and setting these in their historical contexts the book argues that appropriate use of daylight will ensure not only visual and thermal comfort in the urban setting and aid in energy efficiency but also will contribute to the overall identity of new buildings particularly in urban regeneration projects This book brings together an analysis of technical aspects of daylight performance and environmental impact with discussions on the psychology of daylighting and its influence in shaping perceptions of our built environment It will be an ideal read for academics and researchers interested in architecture and cultural studies
