The Concepts of Space and Time M. Capek, 2014-11-14 **Concepts of Space in Greek Thought** K. a. Algra, 1995
This book provides detailed information about the theories of place and space of the ancient atomists Plato Aristotle Peripatetics Stoics and others about the historical and philosophical context of these theories and about the nature of the relevant sources *History of Theories of Space in Physics* Max Jammer, 1993 **The Concepts of Space and Time** Milic Capek, 1976 **Concepts in Space Science** R.R. Daniel, 2002 **Seeing More** Samantha Matherne, Gardner Cowles
Associate Professor of the Humanities Samantha Matherne, 2024-07-19 There is a long standing tradition in philosophy that defines imagination as engaging with things that are not real or present as a kind of fantasy Immanuel Kant offered an original theory of imagination as something that shapes our encounters with what is real present and pervades our lives This book brings this theory of imagining to light New Transnational Social Spaces Ludger Pries, 2013-02-01 Recent terms such as globalisation virtual reality and cyberspace indicate that the traditional notion of the geographic and the social space is changing New Transnational Social Spaces illustrates the contemporary relationship between the social and the spatial which has emerged with new communication and transportation technologies alongside the massive transnational movement of people **The Concepts and Theories of Modern Physics** John Bernhard Stallo, 1884 **Classics from IJGIS** Peter Fisher, 2006-07-20 The past 20 years can be regarded as the adolescence of geographic information science GIS as it grew from a burgeoning area of study into a mature and thriving field During those two decades the International Journal of Geographic Information Science formerly Systems IJGIS was one of the most prominent academic guiding forces in GIScience Logos and Alogon Arkady Plotnitsky, 2023-01-16 This book is a philosophical study of mathematics pursued by considering and relating two aspects of mathematical thinking and practice especially in modern mathematics which having emerged around 1800 consolidated around 1900 and extends to our own time while also tracing both aspects to earlier periods beginning with the ancient Greek mathematics The first aspect is conceptual which characterizes mathematics as the invention of and working with concepts rather than only by its logical nature The second Pythagorean aspect is grounded first in the interplay of geometry and algebra in modern mathematics and secondly in the epistemologically most radical form of modern mathematics designated in this study as radical Pythagorean mathematics This form of mathematics is defined by the role of that which beyond the limits of thought in mathematical thinking or in ancient Greek terms used in the book's title an alogon in the logos of mathematics The outcome of this investigation is a new philosophical and historical understanding of the nature of modern mathematics and mathematics in general The book is addressed to mathematicians mathematical

physicists and philosophers and historians of mathematics and graduate students in these fields The Cognitive Enrichment Advantage Teacher Handbook Katherine H. Greenberg, 2005 The Cognitive Enrichment Advantage Teacher Handbook provides a theoretical framework teachers can use to help their students learn how to learn It builds upon an open and safe classroom atmosphere where students are encouraged to focus on the process of learning at least as much as the product The Handbook explains how teacher mediators employ guided discovery to help students socially construct a shared vocabulary as they focus on developing personal learning strategies The approach is based upon theory and research showing how cognitive enrichment can help develop flexibility in thinking This flexibility together with an understanding how feelings and motivation influence learning can help every student become a more effective life long independent and interdependent learner The approach has been used most often with marginalized students from preschool through adults in more than six countries **Uneven Development** Neil Smith, 2010-01-25 In Uneven Development a classic in its field Neil Smith offers the first full theory of uneven geographical development entwining theories of space and nature with a critique of capitalist development Featuring pathbreaking analyses of the production of nature and the politics of scale Smith's work anticipated many of the uneven contours that now mark neoliberal globalization This third edition features an afterword updating the analysis for the present day **Symbols, Pictures And Quantum Reality - On The Theoretical Foundations Of The Physical Universe** Wolfram Schommers, 1995-02-14 Information about the reality outside flow via our sense organs into the body and the brain forms a picture of reality It is argued that the symbols in the picture have in general no similarity with the objects in the outside world and many facts support such a view This conception is discussed in connection with quantum reality In particular the role of space and time within quantum theory is also investigated from the historical point of view highlighting the original ideas New aspects are covered in connection with the particle concept particle wave dualism locality the time operator the superposition principle and the role of the observer **The Theory of Architecture** Paul-Alan Johnson, 1994-04-18 The Theory of Architecture Concepts Themes Practices Paul Alan Johnson Although it has long been thought that theory directs architectural practice no one has explained precisely how the connection between theory and practice is supposed to work This guide asserts that architectural theory does not direct practice but is itself a form of reflective practice Paul Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field He also reveals the connections between new and old ideas to enhance the reader's powers of critical evaluation Nearly 100 major concepts themes and practices of architecture as well as the rhetoric of architects and designers are presented in an easily accessible format Throughout Johnson attempts to reduce each architectural notion into its essential concept By doing so he makes theory accessible for everyday professional discussion Topics are arranged under ten headings identification definition power attitudes ethics order authority governance relationship and expression Areas covered under these headings include Utopic thought in theories of

architecture Advocacy and citizen participation in architecture The basis of architectural quality and excellence The roles of the architect as artist poet scientist and technologist Ethical obligations of architecture Rationales for models and methods of design How authority is determined in architecture How architects structure their concepts Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed along with a summary history of the topic's use in architecture Discussions probe the conceptual and philosophical difficulties of different theories as well as their potential and limitations in past and present usage Among the provocative issues discussed in terms of their relationship to architecture are chaos theory feminism service to the community and the use of metaphor Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts All architects and designers as well as students and teachers in these disciplines will gain many insights about architectural thought in this groundbreaking text

HowNet And The Computation Of Meaning (With Cd-rom) Zhendong Dong,Qiang Dong,2006-02-22 It is widely acknowledged that natural language processing as an indispensable means for information technology requires the strong support of world knowledge as well as linguistic knowledge This book is a theoretical exploration into the extra linguistic knowledge needed for natural language processing and a panoramic description of HowNet as a case study Readers will appreciate the uniqueness of the discussion on the definitions of the top level classes HowNet specifies such as things parts attributes time space events and attribute values and the relations among them and also the depth of the authors philosophy behind HowNet The book presents the attraction of HowNet's computability of meanings and describes how a software of the computation of meaning can collect so many relevant words and expressions and give a similarity value between any two words or expressions

Changing Ideals in Modern Architecture, 1750-1950 Peter Collins,1998 Changing Ideals in Modern Architecture revolutionized the understanding of modernism in architecture pushing back the sense of its origin from the early twentieth century to the 1750s and thus placing architectural thought within the a broader context of Western intellectual history This new edition of Peter Collins's ground breaking study includes all seventy two illustrations of the original hard cover edition which has been out of print since 1967 and restores the large format

Cognitive and Linguistic Aspects of Geographic Space D.M. Mark,Andrew U. Frank,2012-12-06 This book contains twenty eight papers by participants in the NATO Advanced Study Institute ASI on Cognitive and Linguistic Aspects of Geographic Space held in Las Navas del Marqués Spain July 8 20 1990 The NATO ASI marked a stage in a two year research project at the U S National Center for Geographic Information and Analysis NCGIA In 1987 the U S National Science Foundation issued a solicitation for proposals to establish the NCGIA and one element of that solicitation was a call for research on a fundamental theory of spatial relations We felt that such a fundamental theory could be searched for in mathematics geometry topology or in cognitive science but that a simultaneous search in these two seemingly disparate research areas might produce novel

results Thus as part of the NCGIA proposal from a consortium consisting of the University of California at Santa Barbara the State University of New York at Buffalo and the University of Maine we proposed that the second major Research Initiative two year multidisciplinary research project of the NCOIA would address these issues and would be called Languages of Spatial Relations The grant to establish the NCOIA was awarded to our consortium late in 1988 Geography Education for Global Understanding Ali Demirci,Rafael de Miguel González,Sarah Witham Bednarz,2018-04-26 This book presents the core concepts of geographical education as a means of understanding global issues from a spatial perspective It treats education supported by high standards approaches methodologies and resources as essential in exploring the interactions of the world s human and environmental systems at local regional and global scales embedded in the nature of the discipline of geography It covers topics such as climate change sustainable development goals geopolitics in an uncertain world global crisis and population flows which are of great interest to geography researchers and social sciences educators who want to explore the complexity of contemporary societies Highly respected scholars in geography education answer questions on key topics and explain how global understanding is considered in K 12 education in significant countries around the globe The book discusses factors such as the Internet social media virtual globes and other technological developments that provide insights into and visualization in real time of the intensity of relationships between different countries and regions of the earth It also examines how this does not always lead to empathy with other political cultural social and religious values terrorism threats and armed conflicts are also essential features of the global world This book opens the dialogue for global understanding as a great opportunity for teachers educators scholars and policy makers to better equip students and future citizens to deal with global issues
