Conceptual Information Processing Roger C. Schank, 2014-05-12 Fundamental Studies in Computer Science 3 Conceptual Information Processing discusses a theory of natural language and implementation of that theory on a computer focusing basically on an Artificial Intelligence approach to linguistics This book aims to write computer programs that could understand and generate sentences which is intended as a first step towards the long range goal of a computer that can communicate with people in natural language The topics covered include computational linguistics conceptual dependency theory history of the analyzer representation in memory and structure of BABEL This publication is a good reference for researchers and specialists working in the field of computer science

Explanation Patterns R. P. Schank, 2013-08-21 First Published in 1986 In the age of the computer conjecture about things mechanical has naturally led to the question of whether machines can think As the emphasis on Artificial Intelligence AI has grown rapidly questions about machine intelligence have begun to have a certain urgency The question we are concerned with in this book is If we can find a set of processes that machines can slavishly follow and if by so doing these machines can come up with creative thoughts what would that tell us about human beings If the machine's procedure was adapted from a human procedure that is if all the machine was doing was what we know people are doing would we abandon our inherent skepticism about the abilities of machines or would we demystify our inherent admiration for things human In a sense these are the issues dealt with in this book The author says in a sense because this book is no way a philosophical treatise Rather it is an exercise in Artificial Intelligence and in Cognitive Science it is an attempt to come to understand one of the most complex problems of mind by examining some of the mechanisms of mind to define the apparatus that underlies our ability to think

Software Re-use, Utrecht 1989 Liesbeth M. Dusink, Patrick A.V. Hall, 2013-03-14 In November 1989 we organised a workshop on software re use inviting members of the leading research teams across Europe In retrospect we realise that we missed a few research teams out but nevertheless we did have a very fruitful workshop This book is the outcome of that meeting Prior to the workshop teams submitted short position papers and at the workshop made very short presentations of these Most of the time was spent in four parallel sessions and the reports of these sessions are given in Chapter 2 After the workshop we invited the attendees to revise and resubmit their papers in the light of the workshop and it is these updated papers that appear in Chapter 4 onwards The papers are in alphabetical order of first author To complete this text we have added an introduction to software re use as a first chapter this was prepared by Liesbeth Dusink We have added a comprehensive bibliography as Chapter 3 merging the bibliographies accumulated at Delft and at Brunei To be able to organise the workshop we were sponsored by SERC the Software Engineering Research Centre in Utrecht Netherlands November 1990 Liesbeth Dusink Pat Hall Contents List of Contributors xi

Integration of World Knowledge for Natural

Language Understanding Ekaterina Ovchinnikova, 2012-02-15 This book concerns non linguistic knowledge required to perform computational natural language understanding NLU The main objective of the book is to show that inference based NLU has the potential for practical large scale applications First an introduction to research areas relevant for NLU is given We review approaches to linguistic meaning explore knowledge resources describe semantic parsers and compare two main forms of inference deduction and abduction In the main part of the book we propose an integrative knowledge base combining lexical semantic ontological and distributional knowledge A particular attention is paid to ensuring its consistency We then design a reasoning procedure able to make use of the large scale knowledge base We experiment both with a deduction based NLU system and with an abductive reasoner For evaluation we use three different NLU tasks recognizing textual entailment semantic role labeling and interpretation of noun dependencies *Understanding Language Understanding* Ashwin Ram, Kenneth Moorman, 1999 This book highlights cutting edge research relevant to the building of a computational model of reading comprehension as in the processing and understanding of a natural language text or story The book takes an interdisciplinary approach to the study of reading with contributions from computer science psychology and philosophy Contributors cover the theoretical and psychological foundations of the research in discussions of what it means to understand a text how one builds a computational model and related issues in knowledge representation and reasoning The book also addresses some of the broader issues that a natural language system must deal with such as reading in context linguistic novelty and information extraction *Goal-based Decision Making* Stephen Slade, 2013-06-17 This work presents a goal based model of decision making in which the relative priorities of goals drive the decision process a psychological alternative to traditional decision analysis Building on the work of Schank and Abelson the author uses goals as the basis for a model of interpersonal relations which permits decisions to incorporate personal and adopted goals in a uniform manner The theory is modelled on the VOTE computer program which simulates Congressional roll call voting decisions The VOTE program expands traditional decision making and simulation models by providing not only a choice but also a natural language explanation in either English or French It simulates real members of Congress voting on real bills and producing reasonable explanations The program is consistent with much of the descriptive political science literature on Congressional decision making and provides an explicit model of political issues relationships and strategies that converge in voting behavior In developing the VOTE program the author draws on his own practical experience in politics from four presidential campaigns and the White House Given the underlying psychological basis of the program VOTE can be extended to other decision making domains different from politics Another use for the program is to simulate business decisions such as securities analysis as well as mundane decision making such as choosing a college or deciding whether to get a Mohawk haircut *The Semantic Representation of Natural Language* Michael Levison, Greg Lessard, 2013-05-23 Proposes robust onomasiological semantic formalism and applies it to a wide variety of linguistic phenomena **Basic Cartography for**

Students and Technicians R. W. Anson, F. J. Ormeling, 1984 Efficient Parsing for Natural Language Masaru Tomita, 2013-04-17 Parsing Efficiency is crucial when building practical natural language systems. This is especially the case for interactive systems such as natural language database access interfaces to expert systems and interactive machine translation. Despite its importance, parsing efficiency has received little attention in the area of natural language processing. In the areas of compiler design and theoretical computer science, on the other hand, parsing algorithms have been evaluated primarily in terms of the theoretical worst case analysis, e.g. IX^n , and very few practical comparisons have been made. This book introduces a context free parsing algorithm that parses natural language more efficiently than any other existing parsing algorithms in practice. Its feasibility for use in practical systems is being proven in its application to Japanese language interface at Carnegie Group Inc and to the continuous speech recognition project at Carnegie Mellon University. This work was done while I was pursuing a Ph.D. degree at Carnegie Mellon University. My advisers Herb Simon and Jaime Carbonell deserve many thanks for their unfailing support, advice, and encouragement during my graduate studies. I would like to thank Phil Hayes and Ralph Grishman for their helpful comments and criticism that in many ways improved the quality of this book. I wish also to thank Steven Brooks for insightful comments on theoretical aspects of the book, chapter 4, appendices A, B, and C, and Rich Thomason for improving the linguistic part of the book, the very beginning of section 1.1.

Scientific and Technical Aerospace Reports, 1989 **Algebra, Meaning, and Computation** Kokichi Futatsugi, Jean-Pierre Jouannaud, José Meseguer, 2006-06-21 This volume honoring the computer science pioneer Joseph Goguen on his 65th Birthday includes 32 refereed papers by leading researchers in areas spanned by Goguen's work. The papers address a variety of topics from meaning, meta logic, specification and composition, behavior and formal languages as well as models, deduction and computation by key members of the research community in computer science and other fields connected with Joseph Goguen's work. **Research in Education**, 1974 *Handbook of Human Intelligence* Robert J. It contains general results on the algebraic theory of networks, recent results on the algebraic theory of models for parallel programs as well as results on the algebraic theory of classical control structures. The results are presented in a unified framework of the calculus of flownomials leading to a sound understanding of the algebraic fundamentals of the network theory. The term network is used in a broad sense within this book as consisting of a collection of interconnecting cells and two radically different specific interpretations of this notion of networks are studied. One interpretation is additive when only

one cell is active at a given time this covers the classical models of control specified by finite automata or flowchart schemes The second interpretation is multiplicative where each cell is always active covering models for parallel computation such as Petri nets or dataflow networks More advanced settings mixing the two interpretations are included as well Network Algebra will be of interest to anyone interested in network theory or its applications and provides them with the results needed to put their work on a firm basis Graduate students will also find the material within this book useful for their studies *Books in Series*, 1985 Vols for 1980 issued in three parts Series Authors and Titles **A Guided Tour of Relational Databases and Beyond** Mark Levene, George Loizou, 2012-09-18 Database theory is now in a mature state and this book addresses important extensions of the relational database model such as deductive temporal and object oriented databases It provides an overview of database modelling with the Entity Relationship ER model and the relational model providing the pivot on which the material revolves The main body of the book focuses on the primary achievements of relational database theory including query languages integrity constraints database design computable queries and concurrency control The most important extensions of the relational model are covered in separate chapters This book will be useful to third year computer science undergraduates and postgraduates studying database theory and will also be of interest to researchers and database practitioners who would like to know more about the ideas underlying relational database management systems and the problems that confront database researchers
