Conceptual Issues In Evolutionary Biology:

Conceptual Issues in Evolutionary Biology Elliott Sober, 1994 *Conceptual Issues in Evolutionary Biology* Elliott Sober, 1983 **Conceptual Issues in Evolutionary Biology, third edition** Elliott Sober, 2006-08-04 These essays by leading scientists and philosophers address conceptual issues that arise in the theory and practice of evolutionary biology. The third edition of this widely used anthology has been substantially revised and updated. Four new sections have been added on women in the evolutionary process, evolutionary psychology, laws in evolutionary theory, and race as social construction or biological reality. Other sections treat fitness, units of selection, adaptationism, reductionism, essentialism, species, phylogenetic inference, cultural evolution, and evolutionary ethics. Each of the twelve sections contains two or three essays that develop different views of the subject at hand. For example, the section on evolutionary psychology offers one essay by two founders of the field and another that questions its main tenets. One sign that a discipline is growing is that there are open questions with multiple answers still in competition; the essays in this volume demonstrate that evolutionary biology and the philosophy of evolutionary biology are living, growing disciplines. Contributors: Robin O. Andreasen, Kwame Anthony Appiah, David A. Baum, John H. Beatty, David J. Buller, Leda Cosmides, James Donoghue, Steven J. Farris, Joseph Felsenstein, Susan K. Finsen, Joseph Fracchia, Stephen Jay Gould, Sarah Blaffer Hrdy, David L. Hull, Philip Kitcher, R. C. Lewontin, Elisabeth Lloyd, Ernst Mayr, Michael Ruse, John Maynard Smith, Elliott Sober, John Tooby, C. Kenneth Waters, George C. Williams, David Sloan Wilson, E. O. Wilson. **Conceptual Issues in Evolutionary Biology** Elliott Sober, 1994 There has been debate in philosophy of biology over the decade since the first edition of this anthology appeared. Changes and additions in the new edition reflect the ways in which the subject has broadened and deepened on several fronts: more than half of the chapters are new. In all twenty-three selections take up fitness, function, and teleology; adaptationism; units of selection; essentialism; and population thinking; species; systematic philosophies; phylogenetic inference; reduction of Mendelian genetics to molecular biology; ethics and sociobiology; and cultural evolution and evolutionary epistemology. *Philosophy Of Biology* Elliott Sober, 2018-03-05 Perhaps because of its implications for our understanding of human nature, recent philosophy of biology has seen what might be the most dramatic work in the philosophies of the special sciences. This drama has centered on evolutionary theory, and in the second edition of this textbook Elliott Sober introduces the reader to the most important issues of these developments. With a rare combination of technical sophistication and clarity of expression, Sober engages both the higher level of theory and the direct implications for such controversial issues as creationism, teleology, nature versus nurture, and sociobiology. Above all, the reader will gain from this book a firm grasp of the structure of evolutionary theory, the evidence for it, and the scope of its explanatory significance. *Conceptual Issues in Ecology* Esa. Saarinen, 2012-12-06 In this collection of essays, some of the leading ecologists and philosophers discuss the foundations of ecology and evolutionary biology. While large-scale philosophical convictions and attitudes often direct the theorist's line of

concrete action in data collection and in theory information the foundational convictions typically remain tacit and are seldom argued for The present collection aims to remedy this situation It brings together scholars representing different approaches in a joint effort to explicate and analyse some of the key issues underlying ecological theorizing be they conceptual epistemological or ontological The bulk of the present collection is reprinted from Synthese 43 1980 William C Wimsatt's paper Reductionistic Research Strategies and Their Biases in the Units of Selection Controversy is in turn reprinted from T Nickles ed Scientific Discovery Case Studies D Reidel 1980 It appears here with the kind permission of Prof Nickles The publisher's consent for the reprints has been in each case automatic The essays of Yrjö Haila and Olli Jarvinen and of Leigh M Van Valen appear here for the first time In bringing the present collection together as well as in editing the Synthese symposium on which it is based I have greatly benefited from the suggestions of Professors Marjorie Grene Olli Järvinen and Daniel Simberloff In addition to them I wish to thank all the contributors for their interest in this project

Conceptual Issues in Modern Human Origins Research Geoffrey A. Clark, Catherine M. Willermet, While those who study human origins now agree that the evolution of modern human form extends back much further in time than the evolution of modern human behavior they disagree sharply as to how to interpret the substantive data Two fundamentally incommensurate interpretations of our origins the Replacement camp and the Continuity camp have now emerged out of pre-existing models and theories that go back to the last quarter of the 19th century This book contends that these positions are based on radically different biases and assumptions about what the remote human past was like The purpose of this volume is to examine those conceptual differences not to arrive at a consensus but rather to explore the reasons why a consensus might never be possible

Conceptual Development Ellen Kofsky Scholnick, Katherine Nelson, Susan A. Gelman, Patricia H. Miller, 1999-04 This volume includes contributions from scholars examining conceptual development in a variety of scientific domains It will be of interest to all who study children's thinking whether from psychological educational or philosophical perspectives

Philosophy of Biology Brian Garvey, 2014-12-05 This major new series in the philosophy of science aims to provide a new generation of textbooks for the subject The series will not only offer fresh treatments of core topics in the theory and methodology of scientific knowledge but also introductions to newer areas of the discipline Furthermore the series will cover topics in current science that raise significant foundational issues both for scientific theory and for philosophy more generally Biology raises distinct questions of its own not only for philosophy of science but for metaphysics epistemology and ethics This comprehensive new textbook for a rapidly growing field of study provides students new to the subject with an up to date presentation of the key philosophical issues Care is taken throughout to keep the technicalities accessible to the non biologist but without sacrificing the philosophical subtleties The first part of the book covers the philosophical challenges posed by evolution and evolutionary biology beginning with Darwin's central argument in the Origin of the Species Individual chapters cover natural selection the selfish gene alternative units of selection developmental

systems theory adaptionism and issues in macroevolution The second part of the book examines philosophical questions arising in connection with biological traits function nature and nurture and biological kinds The third part of the book examines metaphysical questions biology's relation with the traditional concerns of philosophy of science and how evolution has been introduced into epistemological debates The final part considers the relevance of biology to questions about ethics religion and human nature

Evolution and the Big Questions David N. Stamos, 2011-09-23 Evolution and the Big Questions David N Stamos's Evolution and the Big Questions delivers what its title promises you get to look at all of the issues such as race and ethics and religion that make the study of evolution so interesting and more than just a science The book is written in a clear and friendly manner and deserves a very wide readership Michael Ruse Florida State University This provocative text considers whether evolutionary explanations can be used to clarify some of life's biggest questions It offers a lively informative and timely look at a wide variety of key issues facing all of us today including questions of race sex gender the nature of language religion ethics knowledge consciousness and ultimately the meaning of life Some of the questions examined are Did evolution make men and women fundamentally different Is the concept of race merely a social construction Is morality including universal human rights a mass delusion Can religion and evolution really be harmonized Does evolution render life meaningless Designed for students and anyone with an interest in the relationship between evolutionary heritage and human nature the text takes an interdisciplinary approach and offers direction for further reading and research Each chapter presents a main topic together with discussion of related ideas and arguments from various perspectives Along the way it poses life's biggest questions pulling no punches and presenting a challenge to thinkers on all levels

Choosing Selection Stephen G. Brush, 2009 Describes the hypothesis that Darwin's natural selection reformulated by R A Fisher J B S Haldane and S Wright in the light of Mendelian genetics is the exclusive mechanism for biological evolution During the 1930s alternatives such as Lamarchism macromutations and orthogenesis were rejected in favor of natural selection acting on small mutations but there were disagreements about the role of random genetic drift in evolution By the 1950s research by T Dobzhansky E B Ford and others persuaded leading evolutionists that natural selection was so powerful that drift was unimportant This conclusion was accepted by most however some biology textbooks and popular articles mentioned drift in the late 1960s

Species, Species Concepts and Primate Evolution William H. Kimbel, Lawrence B. Martin, 2013-12-18 A world of categories devoid of spirit waits for life to return Saul Bellow Humboldt's Gift The stock in trade of communicating hypotheses about the historical path of evolution is a graphical representation called a phylogenetic tree In most such graphics pairs of branches diverge from other branches successively marching across abstract time toward the present To each branch is tied a tag with a name a binominal symbol that functions as does the name given to an individual human being On phylogenetic trees the names symbolize species What exactly do

these names signify What kind of information is communicated when we claim to have knowledge of the following types Tetonius mathewzi was ancestral to Pseudotetonius ambiguus The sample of fossils attributed to Homo habilis is too variable to contain only one species Interbreeding populations of savanna baboons all belong to Papio anubis Hylobates lar and H pileatus interbreed in zones of geographic overlap While there is nearly universal agreement that the notion of the species is fundamental to our understanding of how evolution works there is a very wide range of opinion on the conceptual content and meaning of such particular statements regarding species This is because oddly enough evolutionary biologists are quite far from agreement on what a species is how it attains this status and what role it plays in evolution over the long term

The Character Concept in Evolutionary Biology Günter P. Wagner, 2000-10-31 Almost all evolutionary biologists indeed all biologists use particular features to study life These characteristics or features used by evolutionary biologists are used in a particular way to unravel a tangled evolutionary history document the rate of evolutionary change or as evidence of biodiversity Characters are the data of evolutionary biology and they can be employed differently in research providing both opportunities and limitations The Character Concept in Evolutionary Biology is about characters their use how different sorts of characters are limited and what are appropriate methods for character analysis Leading evolutionary biologists from around the world are contributors to this authoritative review of the character concept Because characters and the conception of characters are central to all studies of evolution and because evolution is the central organizing principle of biology this book will appeal to a wide cross section of biologists Focuses upon characters fundamental data for evolutionary biology Covers the myriad ways in which characters are defined described and distinguished Includes historical morphological molecular behavioral and philosophical perspectives

The Bloomsbury Companion to the Philosophy of Science Steven French, Juha Saatsi, 2014-07-31 The Bloomsbury Companion to the Philosophy of Science presents a practical and up to date research resource to the philosophy of science Addressing fundamental questions asked by areas that have continued to attract interest historically as well as recently emerging areas of research this volume provides a comprehensive and up to date overview of the philosophy of science Specially commissioned essays from an international team of experts reveal where important work continues to be done in the area and the exciting new directions the field is taking The Companion explores issues pertaining to the philosophy of specific sciences physics biology neuroscience economics chemistry and mathematics and general issues in the field such as explanation realism representation evidence reduction laws causation and confirmation Featuring a series of indispensable research tools including an A to Z of key terms and concepts a chronology a detailed list of resources and a fully annotated bibliography The Bloomsbury Companion to the Philosophy of Science the essential reference tool for anyone working in philosophy of science today

Ecological Understanding Steward T.A. Pickett, Jurek Kolasa, Clive G. Jones, 2013-10-22 Ecology is an historical science in which theories can be as difficult to test as they are to devise This volume intended for ecologists and evolutionary biologists

reviews ecological theories and how they are generated evaluated and categorized Synthesizing a vast and sometimes labyrinthine literature this book is a useful entry into the scientific philosophy of ecology and natural history The need for integration of the contributions to theory made by different disciplines is a central theme of this book The authors demonstrate that only through such integration will advances in ecological theory be possible Ecologists evolutionary biologists and other serious students of natural history will want this book

Challenging the Modern Synthesis Philippe Huneman, Denis M. Walsh, 2017 Since its origin in the early 20th century the Modern Synthesis theory of evolution has grown to become the orthodox view on the process of organic evolution Its central defining feature is the prominence it accords to genes in the explanation of evolutionary dynamics Since the advent of the 21st century however the Modern Synthesis has been subject to repeated and sustained challenges These are largely empirically driven In the last two decades evolutionary biology has witnessed unprecedented growth in the understanding of those processes that underwrite the development of organisms and the inheritance of characters The empirical advances usher in challenges to the conceptual foundations of evolutionary theory The extent to which the new biology challenges the Modern Synthesis has been the subject of lively debate Many current commentators charge that the new biology of the 21st century calls for a revision extension or wholesale rejection of the Modern Synthesis Theory of evolution Defenders of the Modern Synthesis maintain that the theory can accommodate the exciting new advances in biology The original essays collected in this volume survey the various challenges to the Modern Synthesis arising from the new biology of the 21st century The authors are evolutionary biologists philosophers of science and historians of biology from Europe and North America Each of the essays discusses a particular challenge to the Modern Synthesis treatment of inheritance development or adaptation Taken together the essays cover a spectrum of views from those that contend that the Modern Synthesis can rise to the challenges of the new biology with little or no revision required to those that call for the abandonment of the Modern Synthesis The collection will be of interest to researchers and students in evolutionary biology and the philosophy and history of the biological sciences

What the Philosophy of Biology Is M. Ruse, 2012-12-06 Philosophers of science frequently bemoan or cheer the fact that today with the supposed collapse of logical empiricism there are now 10 grand systems However although this mayor may not be true and if true mayor may not be a cause for delight no one should conclude that the philosophy of science has ground to a halt its problems exhausted and its practioners dispirited In fact in this post Kuhnian age the subject has never been more alive as we work with enthusiasm on special topics historical and conceptual And no topic has grown and thrived quite like the philosophy of biology which now has many students in the field producing high quality articles and monographs The success of this subject is due above all to the work and influence of one man David Hull In his own writings and in the support he has given to others he has shown true leadership in the best Platonic sense It is now twenty years since Hull fnt gave his seminal paper What the philosophy of biology is not and to mark that point and to show our respect gratitude and affection to its

author a number of us who owe much to Hull decided to produce a volume of essays on and around themes to which Hull has spoken

The Psychology of Word Meanings Paula J. Schwanenflugel, 2013-06-17 This volume contains perspectives from a collection of cognitive scientists on the psychological philosophical and educational issues surrounding the meanings of words and how these meanings are learned and accessed It features chapters covering the nature and structure of word meaning how new word meanings are acquired in childhood and later on in life and how research in word processing may tell us something about the way in which word meanings are represented and how they relate to the language processor

Unifying Biology Vassiliki Betty Smocovitis, 1996-12 Unifying Biology offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history
