## **Conceptual Issues In Evolutionary Biology Second Edition:**

**Conceptual Issues in Evolutionary Biology** Elliott Sober,1994 There has been debate in philosophy of biology over the decade since the first edition of this anthology appeared Changes and additions in the new edition reflect the ways in which the subject has broadened and deepened on several fronts more than half of the chapters are new In all twenty three selections take up fitness function and teleology adaptationism units of selection essentialism and population thinking species systematic philosophies phylogenetic inference reduction of Mendelian genetics to molecular biology ethics and sociobiology and cultural evolution and evolutionary epistemology *The Blackwell Companion to Philosophy* Nicholas Bunnin,Eric Tsui-James,2008-04-15 This fully revised and updated edition of Nicholas Bunnin and E P Tsui James popular introductory philosophy textbook brings together specially commissioned chapters from a prestigious team of scholars writing on each of the key areas figures and movements in philosophy Consciousness Evolving James H. Fetzer,2002-01-01 A collection of stimulating studies on the past the present and the future of consciousness Consciousness Evolving contributes to understanding some of the most important conceptual problems of our time The advent of the modern synthesis together with the human genome project affords a platform for considering what it is that makes humans distinctive Beginning with an essay that accents the nature of the problem within a behavioristic framework and concluding with reflections on the prospects for a form of immortality through serial cloning the chapters are divided into three sections which concern how and why consciousness may have evolved special capacities involving language creativity and mentality as candidates for evolved adaptations and the prospects for artificial evolution though the design of robots with specific forms of consciousness and mind This volume should appeal to every reader who wants to better understand the human species including its distinctive properties and its place in nature Series A **Conceptualizing Religion** Benson Saler,2000 How might we transform a folk category in this case religion into a analytical category suitable for cross cultural research In this volume the author addresses that question He critically explores various approaches to the problem of conceptualizing religion particularly with respect to certain disciplinary interests of anthropologists He argues that the concept of family resemblances as that concept has been refined and extended in prototype theory in the contemporary cognitive sciences is the most plausible analytical strategy for resolving the central problem of the book In the solution proposed religion is conceptualized as an affair of more or less rather than a matter of yes or no and no sharp line is drawn between religion and non religion **Theoretical Psychology** International Society for Theoretical Psychology. Conference,Niamh Stephenson,2003 **The Oxford Handbook of Philosophy of Biology** Michael Ruse,2008-07-10 This handbook covers the history of philosophy of biology then moves on to evolutionary theory It continues with discussions of molecular biology and ecology and covers biology and ethics as well as biology and religion **Ecological Understanding** Steward T.A. Pickett,Jurek Kolasa,Clive G. Jones,2013-10-22 Ecology is an historical science in which theories can be as difficult to test as

they are to devise This volume intended for ecologists and evolutionary biologists reviews ecological theories and how they are generated evaluated and categorized Synthesizing a vast and sometimes labyrinthine literature this book is a useful entry into the scientific philosophy of ecology and natural history The need for integration of the contributions to theory made by different disciplines is a central theme of this book The authors demonstrate that only through such integration will advances in ecological theory be possible Ecologists evolutionary biologists and other serious students of natural history will want this book

**Complexity and Dynamics** ,2017 **Evolution** , Darwin and International Relations: On the Evolutionary Origins of War and Ethnic Conflict Bradley A. Thayer,2009 *Philosophy of Biology* Brian Garvey,2014-12-05 This major new series in the philosophy of science aims to provide a new generation of textbooks for the subject The series will not only offer fresh treatments of core topics in the theory and methodology of scientific knowledge but also introductions to newer areas of the discipline Furthermore the series will cover topics in current science that raise significant foundational issues both for scientific theory and for philosophy more generally Biology raises distinct questions of its own not only for philosophy of science but for metaphysics epistemology and ethics This comprehensive new textbook for a rapidly growing field of study provides students new to the subject with an up to date presentation of the key philosophical issues Care is taken throughout to keep the technicalities accessible to the non biologist but without sacrificing the philosophical subtleties The first part of the book covers the philosophical challenges posed by evolution and evolutionary biology beginning with Darwin s central argument in the Origin of the Species Individual chapters cover natural selection the selfish gene alternative units of selection developmental systems theory adaptionism and issues in macroevolution The second part of the book examines philosophical questions arising in connection with biological traits function nature and nurture and biological kinds The third part of the book examines metaphysical questions biology s relation with the traditional concerns of philosophy of science and how evolution has been introduced into epistemological debates The final part considers the relevance of biology to questions about ethics religion and human nature

Philosophy of Biology Alex Rosenberg,Robert Arp,2009-04-27 By combining excerpts from key historical writings with editors introductions and further reading material *Philosophy of Biology* An Anthology offers a comprehensive accessible and up to date collection of the field s most significant works Addresses central questions such as What is life and How did it begin and the most current research and arguments on evolution and developmental biology Editorial notes throughout the text define clarify and qualify ideas concepts and arguments Includes material on evolutionary psychology and evolutionary developmental biology not found in other standard philosophy of biology anthologies Further reading material assists novices in delving deeper into research in philosophy of biology

The Promise of Evolutionary Epistemology ,1998 Because the human cognitive system is the product of an evolutionary process we may expect that for its understanding an evolutionary perspective may be helpful This collection argues that the analysis of such different domains as perception self identity human rationality and culture does indeed profit

from an evolutionary approach However before the evolutionary project gets started evolutionary epistemology faces a number of charges incoherence irrelevance mental suicide circularity including Stich's charge that the evolutionary argument in favor of the reliability and rationality of our everyday knowledge is based mainly on false premises This book answers these charges

**Philosophy of Evolutionary Biology** Stefan Linquist, 2017-03-02 The impact of evolutionary theory on the philosophy of science has been no less profound than its impact on the science of biology itself Advances in this theory provide a rich set of examples for thinking about the nature of scientific explanation and the structure of science Many of the developments in our understanding of evolution resulted from contributions by both philosophers and biologists engaging over theoretical questions of mutual interest This volume traces some of the most influential exchanges in this field over the last few decades Focal topics include the nature of biological functions adaptationism as an explanatory and methodological doctrine the levels of selection debate the concepts of fitness and drift and the relationship of evolutionary to developmental biology

**Function, Selection, and Design** David J. Buller, 1999-07-01 A complete sourcebook for philosophical discussion of the nature of function in biology

**Edgar Allan Poe, Eureka, and Scientific Imagination** David N. Stamos, 2017-02-28 Silver Winner 2017 Foreword INDIES Book of the Year Awards in the Philosophy category In 1848 almost a year and a half before Edgar Allan Poe died at the age of forty his book Eureka was published In it he weaved together his scientific speculations about the universe with his own literary theory theology and philosophy of science Although Poe himself considered it to be his magnum opus Eureka has mostly been overlooked or underappreciated sometimes even to the point of being thought an elaborate hoax Remarkably however in Eureka Poe anticipated at least nine major theories and developments in twentieth century science including the Big Bang theory multiverse theory and the solution to Olbers paradox In this book the first devoted specifically to Poe's science side David N Stamos a philosopher of science combines scientific background with analysis of Poe's life and work to highlight the creative and scientific achievements of this text He examines Poe's literary theory theology and intellectual development and then compares Poe's understanding of science with that of scientists and philosophers from his own time to the present Next Stamos pieces together and clarifies Poe's theory of scientific imagination which he then attempts to update and defend by providing numerous case studies of eureka moments in modern science and by seeking insights from comparative biography and psychology cognitive science neuroscience and evolution

**Computational Phenotypes** Sergio Balari, Guillermo Lorenzo González, 2013 This is a book about language as a species typical trait of humans It argues that language is not so exceptional after all as according to the authors it is just the human version of a rather common and conservative organic system that they refer to as the Central Computational Complex

**Unravelling the Evolution of Language** Rudolf P. Botha, 2021-11-22 What blocks the way to a better understanding of language evolution it is widely held is above all a paucity of factual evidence Not so argues Unravelling the Evolution of Language This book finds the main obstacle instead in a

poverty of a specific kind of theory restrictive theory It shows too that this poverty of restrictive theory is one of the root causes of the paucity of factual evidence Unravelling takes it that a theory of a thing T for example language is restrictive if it gives us a basis for distinguishing T in a non arbitrary way from all things that are in fact distinct from it including those that happen to be related to it The book then argues in detail that much of the recent work on language evolution proceeds from loose assumptions rather than restrictive theories about a number of crucial things The entities prelinguistic or linguistic that are believed to have undergone evolution the processes by which these entities are believed to have evolved the ways in which these pre linguistic entities link up with entities that are believed to be correlates of them the sources of data that are believed to yield indirect evidence about the evolution of language and the factors that add to or subtract from the scientific substance of accounts of language evolution In support of its main argument Unravelling the Evolution of Language puts forward detailed analyses of various recent accounts of language evolution including co optationist accounts by Noam Chomsky Stephen Jay Gould Massimo Piattelli Palmarini and Lyle Jenkins preadaptationist accounts by Philip Lieberman Wendy Wilkins Jenny Wakefield Andrew Carstairs McCarthy William Calvin and Derek Bickerton adaptationist accounts by Steven Pinker Paul Bloom and others This means that Unravelling as it builds its main argument also offers an appraisal of some significant contributions to recent work on language evolution **Empiricism and Darwin's Science F.**

Wilson,2012-12-06 I would like to record my thanks to Paul Thompson for useful conversations over the years and also to several generations of students who have helped me develop my ideas on biological theory and on Darwin My wife has as usual been more than helpful in particular she typed a good portion of the manuscript while I was on leave a few years ago more now than I like to remember My parents were both looking forward to holding a final copy of this book I only regret that my mother did not live long enough to see its completion I must also thank the publishers and their staff They have been remarkably patient about meeting deadlines promises were repeatedly made and then owing to family situations had to be broken and for this I am considerably in their debt I would further like to thank the following authors and publishers for permission to use their work R C Lewontin The Genetic Basis of Evolutionary Change Figure 1 p 14 1964 Columbia University Press reprinted here by kind permission of the author and publisher F Wilson Goudge's Contribution to the Philosophy of Science in L W Sumner J G Slater and F Wilson eds Pragmatism and Purpose Essays in Honour of T A Goudge 1964 University of Toronto Press reproduced here in part by kind permission of all the editors and the publisher
